P R E F A C E

Goods transport in transit through Yugoslavia in 1986. is a publication with detailed information on goods transit through the territory of the SFRY. It provides statistics by country of loading, by country of unloading, as well as by country of registration of the means of transport, including individual Member Countries of the European Economic Community.

The report has been prepared in the Federal Statistical Office in cooperation with the Statistical Office of the European Communities (EUROSTAT) as part of the overall cooperation in the field of statistics realized on the basis of the Decision 1/87 and 1/88 of the Council for the Cooperation of the SFRY and EEC. The greatest part of the work concerning the study has been carried out with the financial and technical help of the Commission of the European Communities. During the elaboration of the project useful suggestions were obtained from the Federal Customs Administration, the Federal Committee for Transport and Communications and the Yugoslav Railway Community.

The survey consists of two parts separately published in English and Serbo-Croat. The first part contains a short analytical and graphical presentation of the most interesting global flows, while the second part contains basic documentation, statistical tables of results as well as a description of the methodological solutions applied in road, railway and inland waterway transport.

The data on railway and inland waterway transport were obtained by additional processing of the regular monthly and annual surveys carried out in cooperation with the Yugoslav Railway Community, River Port Authorities and inland transport organizations.

Road transport data were obtained from a special survey on transiting road goods vehicles which during the year 1986. used TIR carnets for customs procedure. The survey has been carried out in cooperation with the Federal Customs Administration during the year 1988. Other documents, under alternative customs procedure have not been included within this survey since they did not contain characteristics of interest for this survey. That is why the results obtained are less (approx. 30% as concerns the number of vehicles and approx. 24% as concerns the quantities of goods transported) than the total data on road goods transit.

The Federal Statistical Office takes this opportunity to thank EUROSTAT for highly professional help from Mr Brian Wilson.

METHODOLOGICAL EXPLANATIONS

ROAD TRANSPORT STATISTICS

The Aim and the Subject of the Survey

The aim of this survey was to collect, process and publish the data on the volume and the structure of the international goods transit with road transport vehicles during 1986 in the SFR Yugoslavia, by means of the international TIR carnet used in the custom procedure when entering the Yugoslav border. Direct road goods transit, realized by vehicles operating under TIR carnets at the custom procedure, participates with approx. 70% in the total international road goods transit. The rest of road vehicles in transit through the Yugoslav territory have used another documents or were in transit empty. These documents have not been used in this survey since they have not contained the requested characteristics of the interest for this survey.

The results obtained with this survey will enable, prior to all, the structure appraisal of the international goods flows by countries of loading and unloading and by countries of registration of vehicles performing this transport.

Also, the information obtained will be comparable to the information on the international goods transit realized by other modes of transport, which have been collected, processed and published in the Yugoslav statistical system for a longer period. Besides, the port statistics have provided information on the combined transit of goods realized through the Yugoslav sea ports. Having in mind also the other information about the direct transit of goods realized with the other modes of transport, the coverage and the analysis of the total transit of goods by countries of loading and unloading as well as by countries of transporters will be enabled.

The survey carried out was at the same time the test of the basic conditions for the establishing of such a regular investigation which could provide permanently these very important information. In this way, the data on total international transit of goods through the Yugoslav territory could be completely supplied. Besides, the same methodological principles, checked up in this survey, could provide information also about the other views of international road traffic of goods, such as imports and exports. Moreover, providing these data also, could fully cover the system of information on international flows of goods realized by all modes of transport by the countries of loading and unloading, as well as by the countries of transporters, for the next years. In this way, the creators of economic policy and the working organizations themselves dealing with transport could be supplied with the information on volume and share of the Yugoslav

transporters in the international exchange of commodities of SFR Yugoslavia.

Observation unit

The observation unit in this survey was a road goods vehicle which in the international road goods transit, in custom procedure, used the international TIR carnet entering the Yugoslav border.

In this survey, as the observation unit will not be considered road goods vehicles which in the international road goods transit used some other document such as ATA carnet or registration forms on exports, imports or transit of goods (the Yugoslav custom documents for vehicles not possessing any other of the international documents).

Cluster

Cluster represents all road goods vehicles using TIR carnet, in custom procedure, during the year 1986, when crossing the Yugoslav border, such as:

- all road goods vehicles operating under TIR carnet at the road custom posts on entrance, transporting goods through the Yugoslav road network, to the custom posts on the exit of the international road crossing;
- all road goods vehicles operating under TIR carnets at the road custom posts on entrance, destined the custom posts situated within the territory of Yugoslavia;
- all road goods vehicles operating under TIR carnets at the road custom posts on entrance, destined the custom posts situated within the territory of Yugoslavia, but which is at the same time within some of the Yugoslav sea ports;
- cluster does not cover road goods vehicles using some other custom document, in the custom procedure, as well as road goods vehicles crossing the Yugoslav territory empty.

The Federal Statistical Office in the frame of its regular surveys has provided the annual data on transit of vehicles and goods through the territory of the SFR Yugoslavia covering all the vehicles in transit regardless of the documents used in custom procedure. However, with this regular survey have been collected only the basic information on the number of vehicles in transit, the quantity of goods carried as well as information about the countries of registration of vehicles performing the transit. The significant info-

mations such as country of loading and unloading have not been contained in the documents used in the custom procedure. However, this regular inquiry has covered also the vehicles transiting the Yugoslav territory without loads and vehicles appearing in so called combined transit. Considered as the combined transit is a transit of goods road vehicles arriving from abroad to some of the Yugoslav sea ports, and having been trans-shipped on sea-going vessel left the country by sea. In this way, this regular survey has provided the coverage of vehicles for approx. over 30% if compared with the coverage obtained with the road goods vehicles operating under TIR carnets in custom procedure. The difference has appeared in:

- coverage of the road goods vehicles not using TIR carnet in custom procedure, due to specific kind of goods transporting;

- coverage of the road vehicles transiting the country without loads;

- coverage of the road goods vehicles transiting the country with the trans-shipment in the Yugoslav sea ports.

For clarifying the differences between the data obtained with the regular survey and the results obtained with the special statistical survey on TIR carnets, the Tables as follow present the review of the coverage obtained by the custom posts, as well as by countries of registration (number of vehicles and goods in tonnes).

Methods of Data Collecting

From all the custom posts registering the entrance of the road goods vehicles operating under TIR carnets during 1986, the TIR carnets have been collected and transferred to the Federal Statistical Office. The list of custom posts as well as the number of TIR carnets according to the custom posts have been obtained from the Federal Custom Administration.

The characteristics of interest for this survey have been entered in the extra questionnaire envisaged for this investigation.

The transport of TIR carnets, coding and data editing of the entered information have been done successively, according to the custom posts. After data editing, the material was returned back to the pertinent custom post, and then the material from another custom post was picked up. The action started with the custom office Kopar and was finished with the custom office Bitolj.

Key Words Definitions

To the question *Custom post* one should enter the name of the custom post where TIR carnets are stocked for a vehicle entered the territory of the SFRY and for which reports were submitted.

To the question *Serial number* one should enter serial number of TIR carnets by growing series. One serial number relates to one TIR carnet. All

TIR carnets from one custom post had different serial numbers. For checking up the data entered from the TIR carnets, one should enter in the questionnaire the serial number of the TIR carnet registered by the custom staff. In the case of double serial number at the TIR carnet, one should enter a reserve serial number. For all the custom posts the reserve serial numbers were envisaged.

To the question *Type of transport* one should enter one of the responses anticipated in the Codex of codes for this survey.

ENTRY (imports) represents the type of traffic where place of loading is in some foreign country, and place of unloading is in the SFRY.

TRANSIT represents the type of traffic where the place of loading and unloading is in a foreign country and transport was performed with road goods vehicles through the territory of the SFRY, without trans-shipment onto other transport vehicle.

COMBINED TRANSIT represents type of goods traffic where the place of loading is in a foreign country, and the place of unloading is in the SFRY, while the custom post destination is one of the Yugoslav sea ports.

This information was obtained by comparing the data from the TIR carnets entered under the serial numbers 6 and 7. For the TIR carnets where the country of unloading was SFRY, the column under the serial number 14 was consulted.

There are the following combinations:

Country of loading (6)	Country of unloading (7)	Custom office destined(14)	Type of transport
Foreign country	SFRY	SFRY	Imports
Foreign country	Foreign country	Foreign country	Transit
Foreign country	SFRY	SFRY(Sea Port)	Combined transit

To the question *Country of registration* one should enter a country of the owner of vehicle who performed transport. In most cases the country of registration coincides with the country of TIR carnet issue. In the cases where the transporter could not be easily identified, one should consult the column of the TIR carnet containing name of the firm who issued the TIR carnet, or the column containing the registration plate number of the vehicle. The last mentioned column one should use only in the cases when it contains both the registration plate number and the international sign for the registration of vehicle (for example, YU - Yugoslavia, GB - Great Britain, etc.).

This datum is entered under the serial number 5 in TIR carnet. In the unclear cases, one should consult the columns under the serial numbers 3 and 8 containing the name of the firm who issued the TIR carnet (3), or the registration plate number of the vehicle (8).

To the question *Country of loading* one should enter a country where goods are loaded onto a vehicle for further transport to a final user.

This datum is entered under serial number 6 on TIR carnet.

To the question *Country of unloading* one should enter a country where goods are unloaded from a vehicle for delivery to final user or for further transport with some other transport vehicle.

This datum is entered under the serial number 7 on TIR carnet.

In the cases when two countries of unloading are entered (for example, Greece and Turkey), one should enter the last mentioned country of unloading with all the quantity of goods carried.

To the question *Gross weight in kg* one should enter the weight of goods in gross weight in kilograms. This datum is entered under the serial number 13 on TIR carnet.

To the question *Month* one should enter in Arabic numerals a month when a vehicle crossed the Yugoslav frontier in order to perform goods transport over the SFRY territory.

Procedure of the Survey

The action started on May 23, 1988 with the custom post on the Italian border and was finished on July 17, 1988 with the custom posts at

the Greek and Albanian borders. 230 350 TIR carnets from the 22 custom posts have been collected and processed according to the records on entrance of road goods vehicles with TIR carnets during the year 1986 by the Federal Custom Administration. 109 TIR carnets from the smaller custom posts of the Bulgarian and Romanian borders have not been collected.

19 000 km was performed in the transport of TIR carnets from the custom posts to the Federal Statistical Office and vice versa, 58 employees of the Federal Statistical Office have been engaged in this action. Coding of the material was performed by 34 persons, data input by 11 persons, while data editing and organization of the action, by 13 persons. At the same time a number of persons from the Federal Custom Administration was engaged for coordination of the work and in material preparation for delivering to the Federal Statistical Office.

From 230 350 processed TIR carnets, 209 303 of them refer to direct road transit, 19 728 to imports and 1 319 to combined transit. At the very beginning of the action a certain number of TIR carnets (mostly in Sežana), showed Yugoslavia as the country of loading at the custom post on entrance. According to the explanations of the authorized custom service, they were the TIR carnets concerning goods arriving from abroad with one road goods vehicle at the frontier up to the Goods Transport Center in Yugoslavia, and trans-shipped to another transport vehicle and dispatched further abroad. This kind of TIR carnets were coded extra in the frame of the combined transit and might be easily separated. Having in mind that a new TIR carnet has been issued in Yugoslavia, the country of loading has been considered as unknown.

The significant problems have appeared in the processing of the TIR carnets containing unfilled columns of interest for the survey (the copies are being enclosed). Such characteristics as well as ones not envisaged by the Codex of countries (for example Cyprus) were coded as *unknown*.

Some problems have appeared in the definition of the country of transporter of goods. Namely, some transporters, especially ones from Germany Fed.Rep. and Austria, have not been noted the country of the transporter at the seal place of the owner of vehicle (column 5 in the carnet) and it contained the town only. In such cases, in which the location of the town of transporter could not associate to the pertinent

country, the column 3 of the carnet was consulted since it was referring to the firm and to the country of the TIR carnet issue. It is the reason that in the cases where the country of the TIR carnet issue and the country of transporter of goods differ, the certain mistakes were possible.

The data processing has been carried out immediately after the data input from the last material of the custom office Bitolj. The processing has been finished in August 10, 1988 on the basis of the adopted scheme of tabulation. The SAS

package program has been used in the processing enabling the rapid and the effective processing, but at the same time with some shortages on final tables look.

There were processed and published 74 very detailed tables according to the scheme adopted for tabulation. The scheme for tabulation was agreed by the representatives of the EUROS-TAT and the authorized Yugoslav Offices.

If required, the Federal Statistical Office will be able to perform various additional processings.

RAILWAY TRANSPORT STATISTICS

Introduction

The railway transport statistics is united within the Community of the Yugoslav Railways which, for the statistical needs has provided data on capacities used, transport work, fuel and electrical energy consumption, receipts, foreign exchange operations as well as on persons employed

The railway transport organizations of associated labour, formed in the socialist republics and autonomous provinces, have performed railway transport as their main activity.

Legal basis

By the Decision of the Assembly of the SFR Yugoslavia on the Programme of statistical surveys of interest for the country as a whole, for the period from 1986 to 1990, (*Official Gazette of the SFRY*, No 76/75), the surveys *Monthly Report on Railway Transport* and *Annual Report on Railway Transport*, according to the contents and the organization given in this methodology, have been performed.

The Aim and the Subject

Both, the monthly and the annual reports on railway transport have provided data on work of railway transport organizations performing transport of passengers and goods as their main activity. The aim of these surveys has been to apprise and to analyze the place and the position of the railway transport in the complete system of transport, as well as to direct the capacities of railway transport to the flows of wider social interest.

These reports have secured data as follows:

- length of railway lines by the territorial and the organizational principle;

- number and capacities of transport means and their exploitation;
- transport of passengers and goods;
- passenger and tonne kilometres, performed;
- transport by kind of goods and types of transport;
- number of carloads by kind of goods;
- combined transport at the railway stations at sea and river ports;
- imports and exports of goods by kind of commodities and by countries of unloading;
- transit of goods through the SFRY;
- transport of containers and other transport vehicles (integral transport);
- goods transport by containers;
- traffic of containers by countries;
- purchase and consumption of fuel and electroenergy;
- persons employed;
- receipts and foreign exchange operations.

All these data have been used for calculation of the global statistical indicators, such as, quantity indices on transport services, as well as for evaluation of the volume and structure of the transport, performed by the railway transport organizations compared with the total transport of passengers and goods by all modes of transport.

Observation Unit

The observation units in the railway transport are the railway transport organizations, classified by the Uniform Classification of Economic Ac-

tivities, as the railway transport activity, the subgroup 060101 - Transport of passengers and goods, performing their work at the network of the Yugoslav railways. The railway transport off the network of the Yugoslav railways (industrial tracks in mines, in foundries or in large combines) has not been covered, except in the cases when performed by the railway transport organizations with their own vehicles.

Reporting Units

The reporting units in the railway transport are as follows:

- railway transport organizations (for the republics and for the autonomous provinces);
- the Community of the Yugoslav Railways (for the republics and for the autonomous provinces as well as for the SFRY).

Data Collecting

Due to specific organization of the Yugoslav railways and the existing of the statistical services in the railway transport organizations and in the Community of the Yugoslav Railways, data supplying has been done in two ways, such as:

- statistical services of the railway transport organizations have supplied data to the authorized statistical organ of their socialist republic or autonomous province, in the requested term envisaged by the Programme of the statistical surveys of interest for the country as a whole. The data have referred to the territory of the pertinent railway transport organization in the corresponding republic or autonomous province;
- statistical service of the Community of the Yugoslav Railways has despatched data to the Federal Statistical Office in the term envisaged by the Programme of the statistical surveys of interest for the country as a whole. These data are the totals from all railway transport organizations by socialist republics and autonomous provinces as well as the total for the SFRY.

There are the reporting methods used for data collection on these surveys. Each of the reporting units has to prepare the Report using the questionnaire SŽ/M-11 and SŽ/G-11 on the basis of documentations and the available records of their organization.

The data sources for such a Report are:

- bookkeeping and technical documentation;
- inventory list;
- travel orders of the user of services;
- list of goods;

- other records.

Definitions of Concepts and Characteristics

Considered as the *Goods carried* are all the parcels containing goods and transported on the basis of the Contract on transport. The quantity of goods transported has been expressed in the gross weight including the wrapping material or the equipment (container) itself.

Railway goods transport has been shown in tonnes, in tonne kilometres performed and in the number of wagons (wagons containing goods), both in national and in international transport.

Considered as *National goods transport* the transport between railway stations of one or more railway transport organizations within the territory of the SFRY.

Considered as *International railway goods transport* is the transport between a foreign and a Yugoslav station of loading/unloading, performed with the Yugoslav railway vehicles on the territory of the SFRY (up to the frontier or from the frontier station).

International goods railway transport includes exports, imports and transit.

Exports has referred to the railway transport of goods exported from Yugoslavia abroad through the land frontier stations.

Imports has referred to the railway transport of goods imported from abroad through the land frontier stations.

Railway goods transport exported or imported through the railway stations at sea and river ports is considered to be *National transport* and is included in the national goods transport. However, data are available on transport of goods with the railway transport vehicles, exported or imported through the railway stations at sea and river ports, as well as on actual national transport itself.

Transit has referred to the transport of goods of foreign origin through the lines of the Yugoslav railways destined to the other countries, and has been shown as the direct or combined transit.

Considered as *Direct transit* is the goods transport through the territory of Yugoslavia, where the country of loading and unloading is a foreign country.

Combined transit has referred to the goods arrived from abroad with other transport vehicles up to the Goods Transport Center in Yugoslavia, trans-shipped to the railways and than forwarded abroad, and vice versa. Having in mind the Yugoslav geographic position as transport concerns, the mostly appearing forms of com-

bined transit are such as: sea-railways, road-railways, sea-railways-river, and vice versa.

The combined transit such as sea-railways is considered the goods in transit which from abroad arrived in some of the Yugoslav sea ports, and then trans-shipped there on the railways, and dispatched abroad.

The combined transit such as road-railways has referred to the goods in transit arrived with the road transport vehicles from abroad to the Goods Transport Center in Yugoslavia, trans-shipped there on the railways, and despatched abroad.

Considered as combined transit such as sea-railways-river is goods in transit arrived from abroad in some of the Yugoslav sea ports, trans-shipped there to the railways, and despatched to some other Yugoslav river ports where trans-shipped to an inland waterway craft and despatched abroad.

Tonne kilometres have been shown such as:

Net tonne kilometres performed, for the actual distance and *Tariff net tonne kilometres*, for the freight charges distance computation (used for the needs of the Community of the Yugoslav Railways).

Gross tonne kilometres are the indicators showing the trains exploitation obtained by multiplying of the sum of weight of goods and weight of waggons with the number of kilometres performed for each departure.

Goods transport with containers has been shown in net weight, i.e. excluding the weight of the container itself. However, data on total goods transport where the containers were considered as the load, have been shown in the gross weight, including that of equipment such as containers and pallets, as well as their tonne kilometres performed, regardless of the fact whether they were loaded or empty.

Railway transport of road vehicles refers to the road goods vehicles regardless if they were loaded or empty.

Kind of goods transported in the Yugoslav Railways statistics was used according to the Nomenclature of 54 kinds of goods. For the needs of the Federal Statistical Office, the data have been shown according to the Harmonized Goods Nomenclature of 27 main groups, which might be reconciled with the Domestic Goods Nomenclature of 15 categories as well as with the International Goods Nomenclature of 22 categories.

GOODS NOMENCLATURE OF THE YUGOSLAV RAILWAYS (54 kinds of goods)

INLAND WATERWAY TRANSPORT STATISTICS

Introduction

Yugoslavia has a very convenient natural and geographical resources for development of inland waterway transport. Besides the Danube, a main international navigable river, there is approx. 1872 km of other navigable rivers and 3 canals in northern part of Yugoslavia. In accordance with these natural resources a great many river ports have been developed through which an national or international transport of goods is performed. Some of them, by its geo-

graphical position, with joining of Danube watercourse with the Rhyne-Meina system, are important for the development of transit transport with trans-shipment through Yugoslavia's sea-ports.

Legal basis

The survey *Monthly report on goods transport in river ports*, by its content and organization given in this methodology, has been performed by the Decision of the SFR Yugoslavia's As-

sembly on the Programme of statistical surveys of interest for the country as a whole for the period from 1986. to 1990. (*Official Gazette of the SFRY*, no. 76/85).

The Aim and the Subject

The aim of this survey is to collect, process and publish data on goods transport performed on the navigable rivers and canals in Yugoslavia, and on the international river Danube. By this report data are compiled on economic, technical and geographical characteristics of goods transport, expressed as indicators on type and carrying capacity of craft, flag of craft, river port of loading and unloading, country of loading and unloading, type of transport, commodity groups and quantities. Also, this survey provides data on national and international flow of goods by river ports, by countries of loading and unloading and by craft of Yugoslavia and other countries.

Observation Unit

The observation unit in the *Monthly report on goods transport in river ports* is each particular freight of goods carried by the craft of domestic organizations of associated labour, which are classified under inland waterway transport activity according to the Uniform Classification of Economic Activities.

Also, the observation unit is each freight of goods carried on Yugoslavia's navigable rivers and canals by foreign craft.

Freight of goods in this report considers each quantity of particular freight which has been loaded on an IWT craft, carried by inland waterways and unloaded at the place of destination-unloading.

Reporting Units

All shipping organizations of associated labour which are classified under inland waterway transport activity according to the Uniform Classification of Economic Activities are obliged to complete and report the *Monthly report on goods transport in river ports*.

Also, river port captaincies must report: port captaincy Bezdán for all freight of goods carried by foreign craft in upstream transit through Yugoslavia; port captaincy Veliko Gradište for all freight of goods carried by foreign craft in downstream transit through Yugoslavia; port captaincies Bezdán, Veliko Gradište, Kladovo and Senta for all freight of goods carried by foreign craft in imports and exports of Yugoslavia.

Time period

Survey has been carried out by successive filling in the *Monthly report on goods transport in river ports* by the serial numbers of realized transport of each separate freight of goods. Monthly report is filled in by the shipping organizations of associated labour and river port captaincies and delivered to authorized statistical office in the term determined by the Programme of statistical surveys of interest for the country as a whole.

INSTRUCTIONS FOR FILLING IN THE REPORT FORM

The report form has been completed after the transport has been performed, i.e. after the unloading of goods, and data are given for each separate freight of goods.

The encoding of alphabet characteristics is done according to the Codex of codes for this survey.

Shipping organization of associated labour-river port captaincy- is written the title of domestic shipping organization performing transport of goods in inland waterway transport, or river port captaincy recording goods transport by foreign craft.

Serial number- the successive serial numbers of realized transport of each separate freight of goods are written by the increasing order. It means that in one month period only one number for one separate freight of goods may appear.

Type of craft- is written the type of IWT craft used for the transport of a separate freight of goods. IWT craft by the type of mechanical propulsion and use may be: self-propelled barge, self-propelled tanker, dumb barge, dumb tanker, pushed barge, pushed tanker, combined dumb barge-tanker, wooden barges.

Self-propelled barge is an IWT craft having its own means of mechanical propulsion and a minimum carrying capacity of 50 tonnes.

Self-propelled tanker is an IWT craft having its own means of mechanical propulsion and a minimum carrying capacity of 50 tonnes, intended for the bulk transport of liquids or gases.

Dumb barge is an IWT craft not having its own means of mechanical propulsion, having a minimum carrying capacity of 50 tonnes, of a closed or open construction and specially designed for being towed.

Dumb tanker is an IWT craft not having its own means of mechanical propulsion, having a minimum carrying capacity of 50 tonnes, specially designed for being towed, intended for the bulk transport of liquids or gases.

Pushed barge is an IWT craft designed for being pushed, not having its own means of mechanical

propulsion, having a minimum carrying capacity of 50 tonnes.

Pushed tanker is an IWT craft designed for being pushed, not having its own means of mechanical propulsion, having a minimum carrying capacity of 50 tonnes, intended for the bulk transport of liquids or gases.

Combined dumb barge-tanker is an IWT craft not having its own means of mechanical propulsion, having a minimum carrying capacity of 50 tonnes, intended partly for the transport of loads and partly for the bulk transport of liquids or gases.

Wooden barge is a wooden IWT craft having a minimum carrying capacity of 20 tonnes.

Flag of craft- is written a country under which flag the IWT craft is sailing.

This characteristic is important for showing a participation of foreign fleet in the goods transport on Yugoslavia's navigable waterways.

Carrying capacity in tonnes- is written a carrying capacity of IWT craft.

The figure on carrying capacity is constant, stated in a gauge document and may be changed only by a repeated gauge, i.e. after a reconstruction of IWT craft is performed, in order to increase or decrease a load space.

Each river port of loading is defined with three main characteristics, i.e. river-canal, bank and kilometer of loading.

Port of loading- river-canal is written the title of the river-canal at which the port of loading has been placed.

Port of loading- bank- is written the bank at which the loading of goods has been performed (left or right).

Kilometer of loading- is written the exact kilometer at which the loading of goods has been performed. This is taken from the *Distance finder* and shows the distance from the mouth of the river to the loading place.

Each river port of unloading is defined with three main characteristics, i.e. river-canal, bank and kilometer of unloading.

Port of unloading- river-canal is written the title of the river-canal at which the port of unloading has been placed.

Port of unloading- bank- is written the bank at which the unloading of goods has been performed (left or right).

Kilometer of unloading- is written the exact kilometer at which the unloading of goods has been performed. This is taken from the *Distance fin-*

der and shows the distance from the mouth of the river to the unloading place.

Goods transported in tonnes- is written a gross weight in tonnes of goods transported. If there is a several kinds of goods loaded on an IWT craft, for each of those should be filled in a separate line in the report form, although the other characteristics in the report were identical. Also, if there is one kind of goods loaded on an IWT craft but is directed to a different ports of unloading, for each port of unloading and each quantity of goods should be filled in a separate line in the report.

Kind of goods- commodity classification in inland waterway transport statistics is used according to the Harmonized Goods Nomenclature of 27 commodity groups (with 4 of them having each 2 subgroups), which enables reduction to Domestic Goods Nomenclature of 15 commodity groups and International Goods Nomenclature of 22 commodity groups, with 4 of them having each 2 subgroups.

1. Coal, coke
2. Petroleum and petroleum products, gas
 - 2.1. of which: Crude petroleum
 - 2.2. Petroleum products and gas
3. Iron ore, scrap iron
4. Non-ferrous metal ores and concentrates
5. Non-metallic minerals, crude, other than sand, gravel, macadame
6. Iron, steel and non-ferrous products (metals)
7. Wood, processed and unprocessed
8. Firewood, cellulose wood, cork
9. Cement
10. Sand, gravel, macadame
11. Brick, tile, lime, concrete, asbestos-lime, glass
 - 11.1. Of which: Lime and manufactured building materials
 - 11.2. Glass, glassware, ceramic products
12. Fertilizers
13. Cereals
14. Cereal products
15. Sugar beat
16. Fresh fruits and vegetables
17. Other food products
 - 17.1. Of which: Live animals
 - 17.2. Foodstuffs, animal fodder, tobacco
18. Oilseeds, oil-nuts, oils and fats
19. Raw leather, rubber, paper pulp, textile fibres, waste
 - 19.1. Of which: Textiles, textile articles, man-made fibres and other animal and vegetable materials
 - 19.2. Paper pulp and waste paper
20. Tars and crude chemicals from coal and natural gas
21. Chemicals
22. Manufactured metal articles
23. Machinery, transport equipment
24. Miscellaneous manufactured articles
25. Special transactions

26. Registered parcels
27. Less-than carload lots, parcels

The above Harmonized Goods Nomenclature has been used in transport statistics since 1st January of 1987. Since data in this publication refer to the year of 1986., the Goods Nomenclature used in the tables is as follows:

1. Cereals
2. Fresh fruits and vegetables
3. Other food products, beverages and tobacco
4. Oilseeds, oil-nuts, animal and vegetable oils and fats
5. Wood, cork
6. Fertilizers
7. Crude minerals other than ore
8. Iron ore, scrap iron
9. Non-ferrous metal ores
10. Other crude materials
11. Solid fuels
12. Petroleum and petroleum products, gas
13. Tars and crude chemicals from coal and natural gas
14. Chemicals
15. Lime, cement, other mineral articles
16. Metals
17. Manufactured metal articles
18. Machinery, transport equipment
19. Miscellaneous manufactured articles
20. Special transactions
21. Registered parcels
22. Less-than carload lots, parcels

Type of transport- means that transport on the navigable waterways may be national or international.

National transport considers such transport which is performed between the ports inside the boundaries of Yugoslavia.

International transport, in dependence where the loading or unloading of goods is performed between two countries, may be:

Export- goods which having been loaded on an IWT craft in the country, left the country by inland waterway.

Import- goods which having been loaded on an IWT craft in another country, entered the country by inland waterway and were unloaded there.

Transit (downstream or upstream)- goods which entered the country on an IWT craft and also left it on an IWT craft, at a point different from the point of entry, after being carried across the country solely by inland waterway. Transit downstream means transport of goods loaded in Germany FR, Austria, Czechoslovakia or Hungary for unloading in Bulgaria, Romania or USSR. Transit upstream means transport of goods loaded in USSR, Romania or Bulgaria for unloading in Hungary, Czechoslovakia, Austria or Germany FR.

Transport between foreign river ports (exterior)- goods transport performed between the foreign ports by Yugoslav craft, without crossing through the Yugoslav territory.

Transit with trans-shipment- goods transported from abroad by inland waterways, unloaded in Yugoslav' ports and after having been trans-shipped left the country by different mode of transport, by land or sea; also, goods transported from abroad by land or sea, to the Yugoslav' ports and after having been trans-shipped left the country by inland waterways.

Transit with trans-shipment in inland waterway transport of Yugoslavia, is used for iron ore transported by ship from Brasil, to the Yugoslav' sea-port Bakar, forwarded by railway to the river ports Osijek, Vukovar or Sisak, loaded there and carried by an IWT craft to the Austria's river port Linz.

Number of tours- when during the reporting period transport is performed always by the same IWT craft, on the same relation, same kind and quantity of goods, only one line in the report form can be filled in, in such way that number of tours is written collectively for all transports performed, while the quantity in tonnes and carrying capacity of craft is written only for one tour.
