COMMISSION OF THE EUROPEAN COMMUNITIES

COM(94) 284 final-SYN 449 Brussels, 08.07.1994

Amended proposal for a

COUNCIL DIRECTIVE

on the minimum Health and Safety requirements regarding the exposure of workers to the risks arising from physical agents.

Individual Directive in relation to Article 16 of Directive 89/391/EEC

(presented by the Commission pursuant to Article 189 A (2) of the EC-Treaty)

EXPLANATORY MEMORANDUM

Following the opinion of the European Parliament on a first reading on 20 April 1994, the Commission submits to the Council, in accordance with Article 189C of the Treaty on European Union, an amended proposal for a directive. There are two main kinds of amendment:

one group of amendments provides useful additional detail and clarification of theinitial proposal;

a second group of amendments strengthens the proposal by enhancing the protection offered to the health and safety of workers.

The Commission's amended proposal retains the general structure and objectives of the initial proposal but extends and expands on certain provisions.

Of the 41 amendments adopted by the plenary session of the European Parliament, 31 have been accepted, 4 of these in part.

Six amendments have been refused because they sought to exclude audible acoustic fields (Annex I) from the scope of the proposal. The Commission has not accepted these amendments because they are contrary to the Commission's obligations under Article 10 of Directive 86/188/EEC, and under the European Parliament Resolution of 13 September 1990, which requires the Commission to put forward a proposal for a directive on the basis of Article 118A of the Treaty with regard to the risks arising from noise and vibration and other physical agents.

The Commission has also refused an amendment which imposes on it an obligation already fulfilled by the Commission in producing its annual report on the implementation of Community legislation.

Three amendments could not be accepted because their extremely binding nature would impose additional costs on employers yet not contribute to enhancing the health and safety of workers.

Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April 1994
THE COUNCIL OF THE EUROPEAN COMMUNITIES,	THE COUNCIL OF THE EUROPEAN UNION,
Having regard to the Treaty establishing the European Economic Community, and in particular Article 118A thereof,	Having regard to the Treaty establishing the <u>European</u> <u>Community</u> , and in particular Article 118A thereof,
Having regard to the proposal from the Commission, drawn up after commutation with the Advisory committee on Safety, Hygiene and Health Protection at Work,	
In cooperation with the European Parliament,	
Having regard to the opinion of the Economic and Social Committee,	
Whereas Article 118A of the Treaty provides that the Council shall adopt, by means of directives, minimum requirements for encouraging improvements, especially in the working environment, to guarantee a better level of protection of the health and safety of workers;	
Salecy of workers;	
Whereas, under the terms of that Article, such directives are to avoid imposing	
administrative, financial and legal constraints in a way which would hold back the	
creation and development of small and medium-sized undertakings;	
Whereas the communication from the Commission on its programme concerning safety, hygiene and health at work (1) provides for the adoption of measures to	
promote safety at work, particularly with a view to extending the scope of Council Directive 86/188/EEC of 12 May 1986 on the protection of workers from the risks related	
to exposure to noise at work (2) and the re-evaluation of the threshold values; whereas	

-Page 1€

	•	
Original Commission Proposal		Amended proposal after the opinion of the EP on 20 April
		1994
the Council, in its resolution	•	
of 21 December 1987 on safety, hygiene and health at work		
(3) , took note of this;		
Whereas the communication from		
the Commission (4) concerning its action programme relating		
to the implementation of the Community Charter of the		
Fundamental Social Rights of Workers (5) provides for the	,	
introduction of minimum health and safety requirements		
regarding the exposure of		
workers) the risks caused by physical agents; whereas in	:	
September 1990 the European Parliament adopted a	• • • • • • • • • •	
resolution concerning this		
inviting the Commission in particular to draw up a		
specific directive on the dangers connected with noise		
and vibration and any other physical agent at the		
workplace;		
Whereas compliance with the	• •	
minimum requirements designed	-	
to guarantee a better standard of health and safety at work	_	
as regards the protection of workers from risks arising		
from exposure to physical agents is intended not only to	•	
ensure the health and safety of each worker on an		
individual basis, but also to create a minimum basis of		
protection for all Community workers in order to avoid		
possible distortions of competition;	. •	
· · · · · · · · · · · · · · · · · · ·	· · · ·	
Whereas a single system of protection against all	8 . .	
physical agents must be established at Community	· .	3
level; whereas such a system must limit itself to a		
definition, free of excessive		
detail, of the objectives, the principles and the fundamental		
values to be used, in order to enable Member States to apply		
the minimum requirements in an equivalent manner;		
Whereas Directive 86/188/EEC made provision for the Council	· · · · ·	
to re-examine, on a proposal from the Commission and with a		
view to reducing the risks concerned, both its scope	· :	
		1 · · · · · · · · · · · · · · · · · · ·

Original Commission Proposal	Amended proposal after the
	opinion of the EP on 20 April
	1994
	-
provisions, taking into	
account in particular progress	
made in scientific knowledge	
and technology; whereas substantial amendments	
consequently need to be made	
to that Directive pursuant to	
Article 118A of the Treaty;	
Whereas stens should also be	
Whereas steps should also be taken to introduce, at	
Community level, minimum	
health and safety requirements	
concerning the exposure of	
workers to all physical	
agents, with the exception of these covered by the FAFC	
those covered by the EAEC Treaty;	
Whereas the minimum	
requirements in this field	
should establish the general	
principles of protection and the objectives to be achieved,	
whilst leaving open the	
detailed rules translating the	
safety levels in operational	
terms, to be adopted in order	
to comply with the provisions	
of this Directive;	
Whereas the level of exposure	
to physical agents can be more	
effectively reduced by	
incorporating preventive	
measures into the design of workstations and places of	
work and by selecting work	
equipment, procedures and	
nethods so as to give priority	
to reducing the risks at	
source; whereas provisions relating to work equipment and	
nethods thus contribute to the	
protection of the workers	
involved;	
Whereas the current situation in the Member States does not	
always make it possible to	
prescribe an exposure value	
for physical agents below	
which they no longer present a	
health risk;	
Whereas current scientific	
knowledge of the effects which	
exposure to physical agents	
may have on health is not	
sufficient to enable precise	
exposure levels covering all	
risks to health, especially as	
regards the effects of noise other than those of an	
auditory nature, to be set;	
	그 물건 가슴

Driginal Commission Proposal		Amended proposal after the opinion of the EP on 20 April
	*	1994
Whereas employers are obliged		
to make adjustments in the light of technical progress		
and scientific knowledge		
regarding risks related to exposure to physical agents,		
with a view to improving the		
nealth and safety protection of workers;		
whereas, having regard to the		
wide variety of technical data	· · ·	
available internationally in this field, additional		
documents may be drawn up with	.'	
a view to consolidating and updating the minimum	· .	
requirements,	•	
Whereas this Directive is an Individual Directive within		
the meaning of Article 16 (1)		
of Council Directive 39/391/EEC of 12 June 1989 on	•	
the introduction of measures		
to encourage improvements in the health and safety of		
vorkers at work (1); whereas		
the provisions of that Directive are therefore fully		
applicable to the exposure of vorkers to physical agents,		
vithout prejudice to more		
stringent and/or specific		· · ·
)irective;		
Whereas this Directive		
constitutes a practical step cowards creating the social		
limension of the internal market;

AS ADOPTED THIS DIRECTIVE:		
	•	

Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April 1994
	·
Section I General provisions Article 1 Aim	
1. This Directive, which is the nth individual Directive within the meaning of Article 16(1) of Directive 89/391/EEC,	
has as its aim the protection of workers against the risks to their health and safety, including the prevention of such risks, arising or likely	
to arise from exposure to physical agents.	
It lays down particular minimum requirements in this area.	
2. This Directive shall not apply to the health protection of workers against dangers arising from radiation covered by the Treaty establishing the European Atomic Encrypt	
European Atomic Energy Community. 3. Directive 89/391/EEC shall	
apply fully to the whole area referred to in paragraph 1, without prejudice to more stringent and/or specific provisions contained in this Directive.	
Article 2 Definitions	
For the purposes of this Directive, the following terms shall have the meaning hereby assigned to them:	
1. Physical agents	
- audible acoustic fields;	
- vibrations,	
- electric or magnetic fields or combinations thereof with a frequency equal to or less than 3,10 exp (15) Hz (wavelength of 100 nanometres or more).	
2. <u>Levels</u> :	
	<u>- Exposure limit value :</u> <u>The exposure value above</u> <u>which an unprotected person</u> <u>is exposed to unacceptable</u>

-Page 5-

Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April 1994	· .
,	risks. Exceeding this value is prohibited and must be prevented through the implementation of the provisions of this Directive.	
- <u>Ceiling level</u> : the exposure value giving rise to risks for an unprotected person; exceeding this level is prohibited and must be prevented through the implementation of the provisions of this Directive,	<u>Delete</u>	
- <u>Threshold level</u> : the value towards which implementation of this Directive should be geared,	Threshold level : <u>the exposure</u> value <u>below which continuous</u> and/or repetitive <u>exposure has</u> no <u>adverse effect on health</u> and <u>safety of workers.</u>	
- <u>Action level</u> : the value, situated between the threshold and ceiling levels, above which one or more of the specified measures must be undertaken.	A tion level : <u>the value</u> <u>above</u> <u>which one or more of the</u> <u>measures specified in the</u> <u>relevant Annexes must be</u> <u>undertaken.</u>	
These levels shall not take into account the effect of using any item of personal protective equipment within the meaning of Council Directive 89/656/EEC (2).		
3. <u>Assessment</u> : a qualitative operation and/or a quantitative guidelines measurement, as distinct from measurement, which is quantitative and requires the use of an appropriate methodology;	3. Assessment of the exposure <u>level</u> :a qualitative operation and/or a quantitative guidelines measurement, as distinct from measurement, which is quantitative and requires the use of an appropriate methodology;	
4. <u>reference to the Annexes</u> : any reference made by this Directive to the Annexes shall be restricted to the part which is specific to the physical agent in question.		
Article 3 Scope - determination and assessment of risks		
 This Directive shall apply to activities in which workers are or are likely to be exposed to physical agents as a result of their work. 		
2. In the case of any activity referred to in paragraph 1,		

-Page 6-

· · ·	
Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April 1994
the employer shall carry out an assessment, as set out in Article 6 (3) of Directive 89/391/EEC, of the risks resulting from exposure.	
3. Pursuant to the provisions of Article 9 of Directive 89/391/EEC, the employer shall give particular attention, when carrying out the assessment referred to in paragraph 2, to any effects concerning the health and safety of workers belonging to oroups at particular risks, in order to ensure effective protection.	3. Pursuant to the provisions of Article 9 of Directive 89/391/EEC, the employer shall give particular attention, when carrying out the assessment referred to in paragraph 2, to any effects concerning the health and safety of workers belonging to <u>particularly sensitive</u> <u>risk groups</u> , in order to ensure effective protection.
• •	<u>Measures concerning</u> <u>particularly sensitive risk</u> <u>groups shall be aimed</u> <u>exclusively at preventing</u> <u>exposure to risks.</u>
4. Under the conditions laid	
down in the relevant Annexes, certain activities shall be considered as presenting an increased risk. They must be declared to the authority responsible. Member States	
shall ensure that appropriate measures are taken in order to control the risks	
associated with these activities.	
(2) OJNoL393,30.12.1989,p.18.	
Section II Obligations of employers	
Article 4 Assessment and measurement	Article 4 Assessment and measurement <u>of the exposure</u> <u>level</u>
1. Under the conditions laid down in the relevant Annexes, each physical agent present at work shall be assessed and, when necessary, measured in	
order to identify the workers and workplaces referred to in this Directive and to	
determine the conditions under which the specific provisions of this Directive apply.	
2. The assessment and	

Original Commission Proposal	· .	Amended proposal after the opinion of the EP on 20 April 1994
measurement referred to in paragraph 1 shall be competently planned and carried out at suitable intervals, taking particular account of the provisions of Article 7 of Directive	• •	
89/391/EEC concerning the necessary competent services or persons; these intervals shall be revised where there is reason to believe that they are incorrect or that a material change has taken place in the work.		
The methods used may include sampling, which must be representative of the personal exposure of a worker to the physical agent in question.		
The methods and apparatus used must be adapted to the particular characteristics of the physical agent to be measured, the length of exposure, ambient factors and the characteristics of the measuring apparatus.		
They shall make it possible to determine the physical parameters used as hazard predictors (defined in the relevant Annexes) and to decide whether, in a given case, the values laid down in this Directive have been	•	
exceeded. The methods and apparatus may make use of parameters derived from those set out in the relevant Annexes, provided that the derived parameters guarantee fulfilment of the obligations set out in this subparagraph.		
For the purposes of applying this paragraph, the value measured shall be increased to account for inaccuracies in measurement as determined in accordance with metrological practice.		
3. The data obtained pursuant to this Article shall be preserved in a suitable form so as to permit consultation at a later date.	·	
Article 5 - Provisions aimed at avoiding or reducing exposure		

-Page 8-

0	riginal Commission Proposal		Amended proposal after the opinion of the EP on 20 April 1994
	1. Taking account of technical progress and of the availability of measures to control the physical agent at source, the risks arising fro exposure to the physical agent must be reduced to the lowest achievable level, with the ai of reducing exposure to below the threshold level referred to in the relevant Annex. Reduction of these risks shall	c Dm ht Lm	
	be on the basis of the genera principles set out in Article 6 (2)of Directive 89/391/EEC.	a	
•	2. Under the conditions laid down in the Annexes, the employer shall establish and implement a programme to reduce the risk referred to i paragraph 1 by means of technical and/or organizational measures.	.n	
. •	3. Where measures implemented pursuant to this Directive do not permit exposure levels to be kept below the ceiling level:		3. Where measures implemented pursuant to this Directive do not permit exposure levels to be kept below the <u>exposure</u> <u>limit value:</u>
	 (a) the employer shall immediately implement measure to reduce unavoidable risks t levels not exceeding those resulting from exposure of an unprotected person to this ceiling level including, in the last resort, prescribing the use of personal protectiv equipment; if the required reduction cannot be achieved, the provisions of Article 8 (3), (4) and (5) of Directive 89/391/EEC shall apply; 	.o	<pre>(a) the employer shall immediately <u>take all</u> <u>collective</u> measures to reduce risks <u>not avoidable by</u> <u>technological or</u> <u>organizational means</u> to levels not exceeding those resulting from exposure of an unprotected person to this <u>exposure limit value</u>. <u>Where this is not possible the</u> <u>employer shall prescribe the</u> use of personal protective equipment. If the required reduction cannot be achieved, the provisions of Article 8(3) (4) and (5) of Directive 89/391/EEC shall apply;</pre>
	(b) the employer shall identify the reasons why the ceiling level has been exceeded and shall amend the programme of measures set out in paragraph 2 in order to avoid a repeat occurrence.		(b) the employer shall identify the reasons why the <u>exposure limit value</u> has been exceeded and shall amend the programme of measures set out in paragraph 2 in order to avoid a repeat occurrence.
	4. Pursuant to the provisions of Article 15 of Directive 89/391/EEC, the employer shal adapt the measures referred t in this Article to the requirements of particularly	.1

Original Commission Proposal		Amended proposal after the opinion of the EP on 20 April 1994	
sensitive risk groups.			
Article 6 - Personnal protection			
1. Pursuant to the provisions of Directive 89/656/EEC and under the conditions laid down in the relevant Annexes, personal protective equipment must be made available to			
workers and used by them in accordance with the provisions of point (a)of Articl 5 (3)of this Directive and Article 13 (2)of Directive 89/391/EEC.			
2. For the purposes of this Directive, personal protective equipment shall be considered adequate if, when worn correctly, the resulting foreseeable risk is maintained at a level lower than that resulting from the exposure referred to in the relevant Annexes.		Delete	
3. The employer shall be responsible for checking the effectiveness of the measures taken in compliance with this Article.		2. The employer shall be responsible for checking the effectiveness of the measures taken in compliance with this Article.	:
Article 7 - Worker information			
1. Without prejudice to Article 10 of Directive 89/391/EEC, workers must receive information concerning health and safety relating to exposure to physical agents at work; in particular, once exposure exceeds the threshold level they must be informed of the resulting potential risks.			
2. In accordance with the procedures laid down in the relevant Annexes, workers shall in addition be informed about:			
 measures taken pursuant to this Directive, including where and when they apply; 			. •
 the obligation to comply with protective and preventive measures, in accordance with national legislation; 			
	, ,

 the wearing of personal protective equipment and the 	
role of health surveillance	
in accordance with Article	
3. The workers' representatives	
referred to in Article 3(c) of Directive 89/391/EEC, and the	
workers concerned, shall	
receive the results of assessments and measurements	
of the physical agent made	
pursuant to Article 4 of this Directive, together with	
explanations of the significance of those results.	
They shall also receive the	
programme of measures referred to in Article 5 (2) of this	
Directive and shall be informed without delay of the	
application of the provisions	
of Article 5 (3) thereof.	
Article 8 - Access to risk	
areas	
Under the conditions laid	
down in the relevant Annexes, workplaces where specific	
protective provisions apply shall be marked with	
appropriate signs. The areas	
in question must also be delimited and access to them	
must be restricted where the risk of exposure so	
justifies.	
Article 9 Training of workers	
Pursuant the provisions of	
Article 12 of Directive 89/391/EEC, and under the	
conditions laid down in the	
Annexes to this Directive, workers must receive training	
covering in particular the	
matters referred to in Article 7 (2) of this	
Directive.	
Article 10 - Consultation and participation of workers	
Consultation and	
participation of workers and/or of their	
representatives shall take	
place in accordance with Article 11 of Directive	
89/391/EEC on the matters

covered by this Directive, including the Annexes thereto.		······································
		· · · · · · · · · · · · · · · · · · ·
SECTION III Miscellaneous provisions		
Article 11 Health surveillance		
surveillance		
1. The health surveillance referred to in Article 14 of Directive 89/391/EEC shall be carried out in accordance with the provisions of	•	
Article 6 (5) of the said Directive and under the conditions laid down in the Annexes to this Directive by	:	
or under the responsibility of a doctor, or by a specialist if the doctor considers this necessary.		
2. This surveillance shall	•	
take account of the significance of the risk and shall have as its objective the prevention and early diagnosis of any ailment due to exposure to a physical agent. It must allow an assessment of the worker's suitability to occupy a		
position _nvolving such exposure.		
3. Workers whose activity involves the wearing of personal protective equipment or is referred to in Article 3 (4) shall receive systematic health surveillance. Where over- exposure is suspected, a medical examination must be offered to the worker(s) concerned within an appropriate period of time.		3. Workers whose activity involves the wearing of personal protective equipment or is referred to in Article 3 (4) shall receive systematic health surveillance. <u>Where exposure</u> <u>above the exposure limit</u> <u>value</u> is suspected, a medical examination must be offered to the worker(s) concerned within an appropriate period of time.
4. The results of health surveillance shall be preserved in an appropriate form enabling them to be consulted at a later date.	· · ·	4. The results of health surveillance shall be preserved in an appropriate form enabling them to be consulted at a later date. The worker concerned shall be given a copy on request of the results of their health surveillance.
5. Member States shall take		

-Page 12-

Original Commission Proposal		Amended proposal after the opinion of the EP on 20 April 1994
the necessary measures with a view to the doctor and/or the medical authority responsible having, as part of health surveillance, access to the data referred to in Article 4 (3) and giving appropriate indications on any protective or preventive measures to be taken.		
Article 12 - Provisions relating to equipment and working methods	·	
1. The design of workplaces and work stations, the choice of work equipment and the choice of working and		
production methods referred to in Article 6 (2) (d) of Directive 89/391/EEC shall take into account any emission of physical agents		
which may result therefrom. Pursuant to the provisions of Article 3 of Directive 89/655/EEC (1), work equipment shall be chosen by taking into account its emissions, which must be compared with those from		
similar equipment. 2. Member States shall take appropriate measures to ensure the health and safety of workers in order that:		
(a) for the purposes of conforming with the provisions of Article 6 (1) of Directive 89/655/EEC, and	•	
if the equipment used may cause exposure exceeding the action level referred to in the relevant Annex to this Directive for a worker using it, the employer:	• • •	
- carries out or causes to be carried out, for each physical agent, the assessment described in Article 4 (1), if he has appropriate information		
provided by the manufacturer of the work equipment on the basis of Community Directives having as their objective the freedom of movement for work equipment;	• • . • .	
 carries out or causes to be carried out the necessary 	•

<pre>measurement(s) for each physical agent;</pre>	
(b) where work equipment is subject to Community provisions with the aim or effect of limiting exposure to a physical agent, that item of work equipment be made available to workers whenever the type of activity	
permits. Article 13 - Extension of exposure, interference,	
indirect effects	
 Under the conditions laid down in the relevant Annexes, Member States shall take appropriate measures to: 	
(a) control the harmful effects resulting from the exposure of workers to the physical agent in question when such exposure extends beyond working hours for reasons related to the work;	
(b) restrict, pursuant to the provisions of Article 6 (3) of Directive 89/391/EEC, the physical agent in question to values below those laid down by this Directive whenever this is necessary for the protection of health and safety.	
2. When a physical agent present during work involves a risk for workers not arising from exposure to that agent, this risk must be controlled without prejudice to the provisions of this Directive pursuant to the provisions of Article 5 (1) of Directive 89/391/EEC.	2. When a physical agent <u>involves an indirect risk</u> for workers <u>due to its</u> <u>interference with equipment</u> <u>or substances present at the</u> <u>work place</u> , this risk must be <u>controlled without prejudice</u> to the provisions of this Directive pursuant to the provisions of Article 6(3) of Directive 89/391/EEC.
Article 14 - Derogations	
1. Member States may grant exemptions, but only under the conditions laid down in the relevant Annexes, from certain provisions of this Directive where, under particular circumstances, their application may increase the overall risk to	1. Member States may grant <u>derogations</u> , but only under the conditions laid down in the relevant Annexes.

	<u>supplementary annexes to</u> <u>include physical agents other</u> <u>than those referred to in</u>

Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April
	1994
Amendments to the provisions and technical data in the Annexes shall be laid down in accordance with the procedure set out in Article 17 of Directive 89/391/EEC with regard to:	2. Amendments to the provisions and technical data in the Annexes shall be laid down in accordance with the procedure set out in Article 17 of Directive 89/391/EEC with regard to:
- the adoption of directives in the field of technical harmonization and standardization with regard to the design, building, manufacture or construction of work equipment and/or workplaces;	
- technical progress, changes in international rules or specifications and new findings relating to the effects of physical agents on health.	
Article 17 - Repeal	
Directive 86/188/EEC is repealed with effect from the date set out in the first subparagraph of Article 18 (1).	
References to the repealed Directive shall be understood as referring to this Directive and shall be read according to the table of equivalence set out in Annex V.	
Article 18 - Final provisions	
 Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 31 December 1995. They shall immediately inform the Commission thereof. 	
When Member States adopt these provisions, these shall contain a reference to this Directive or shall be accompanied by such reference at the time of their official publication. The procedure for such reference shall be adopted by Member States.	
· · · · ·	

-Page 16-

Original Commission Proposal	- - -	Amended proposal after the opinion of the EP on 20 April 1994
2. Member States shall communicate to the Commission the texts of the provisions of national law which they adopt or have already adopted in the field covered by this Directive.		
3. Member States shall report to the Commission every five years on the practical implementation of the provisions of this Directive, indicating the points of view of both sides of industry.		
On the basis of these reports, the Commission shall inform the European Parliament, the Council, the Economic and Social Committee and the Advisory Committee on Safety, Hygiene and Health Protection at Work.	-	
Article 19		
This Directive is addressed to the Member States.

ANNEX 1 : noise		
1. Risk		
This Annex refers to the risk to health and safety resulting from exposure to noise, and in particular the risk to hearing and the risk of accidents. The physical parameters used to predict danger are the risk of accidents. The physical parameters used to predict danger are as follows:		
 peak acoustic pressure Pmax maximum value, in pascals, of the "C"-weighted instantaneous sound pressure; 	•	
- daily sound exposure LEX,8h : standardized sound exposure level for a reference		

(4)

Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April 1994
eight-hour day as defined by international standard ISO 1999 : 1990; all noises present at work, whatever their time characteristics, are to be included when determining exposure.	-
2. Levels	
The threshold level is established at LEX,8h = 75 dB(A);ceiling levels are established at LEX,8h = 90 dB(A) and at Pmax = 200 Pa (1).	The threshold level is established at LEX,8h = 75 dB(A); exposure limit values are established at LEX,8h = 90 dB(A) and at Pmax = 200 Pa (1)
Intermediate action levels are established at :	
- LEX,8h = 80 dB(A) and/or Pmax = 112 Pa for:	
 informing workers likely to be exposed to these levels (Article 7 (2)); 	
 supplying personal protective equipment to workers who request it (Article 6 (1)); 	
- LEX,8h = 85 dB(A) and/or Pmax = 112 Pa for:	
 training in the implementation of measures taken pursuant to this Directive (Article 9), for the benefit of workers likely to be exposed to these levels; 	
 providing information on the noise produced by work equipment likely to give rise to such exposure where it relates to a reference duration of eight hours (Article 12 (2) (a)); 	
 the programme of technical and/or work organization measures aimed at reducing exposure (Article 5 (2)); 	
- LEX,8h = 90 dB(A) and/or Pmax = 200 Pa for the delimiting of areas where workers are likely to be exposed to these levels and for the restriction of access (Article 8);

ANNEX 2 Mechanical Vibration						
A. Hand - Transmitted Vibration						

Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April 1994
1. Risk	
This Annex refers to the risk	
to health and safety	
resulting from exposure to	
vibration transmitted to hand-arm : vascular, bone and	
joint, neurological or muscle	
disorders.	
The quantity used as a	
predictor of the hazard is the daily hand-transmitted	
vibration exposure A (8) as	
defined by BS 6842 : 1987	
using for ah,w(t) (in its Section 4.1) the vector sum	
(root sum square) of the	
weighted root mean square	
accelerations determined in orthogonal coordinates with	
the frequency weighting	
defined by that standard. However, if an axis produces	
a weighted value which is	
less than 50% of the maximum	
value determined at the same point but in another axis, it	
can be neglected.	
2. Values	
The threshold level is	
established at $A(8) = 1 \text{ m.s}^2$.	
Subject to the provisions of article 13, the ceiling level is established at $A(8) = 5$	<u>The exposure limit value</u> is established at $A(8) = 5 \text{ m.s}^2$
m.s [*] .	
The action level is	
established at	
$A(8) = 2.5 \text{ m.s}^2$ for :	
- providing the information	
mentioned in Article 7 (2), to the workers likely to be	
exposed to this level.	
- training in the	
implementation of measures	
taken pursuant to this Directive (Article 9), for	
the benefit of workers likely	
to be exposed to this level ;	
- providing information on	
the vibration produced by	
the vibration produced by work equipment likely to give rise to such exposure during	

Original Commission Proposal hours (Article 12 (2) (a)) ; - the programme of technical and/or work organization measures aimed at reducing exposure (Article 5 (2)) For applying the provisions of this Section, it is considered that A(8) is likely to reach 2,5 m.s when the work equipment used transmits to the hand-arm system a short term (a few minutes) equivalent acceleration equal to that numerical value. 3. Hazardous activities (Article 3) The provisions of Article 3 (4) apply to activities requiring the use of work equipment which transmits to the hand-arm system a shortterm (a few minutes) equivalent acceleration equal to or greater than 20 m.s⁻² 4. Measurement and evaluation (Article 4) In the case of devices which need to be held by both hands, measurement shall be made on each hand. The hazard is expressed by the highest energy equivalent acceleration, and information for the other hand will be given. Where the level of vibration cannot be reliably quantified, the likelihood of exposure above the action level must be evaluated (observation of working practices and information on the equipment used) in order to judge the risks involved. If an exposure above the action level cannot be ruled out, the corresponding preventive measures must be implemented. 5. Reduction of the risk (Article 5)

(a) As long as adequate and

Amended proposal after the opinion of the EP on 20 April 1994

Activities with increased (Article 3)

з.

risk

-Page 22-

riginal Commission Proposal	Amended proposal after the opinion of the EP on 20 April
	1994
practical personal protective equipment is not available, the provisions aimed at reducing the exposure shall be complemented by measures reducing the hazard arising from such exposure.	
(b) Where the activity involves the use of work equipment which transmits to the hand-arm system a short- term (a few minutes) equivalent acceleration exceeding 10 m.s ⁺ , increased	
efforts shall be made to reduce the hazard, with	
priority to the use of low- vibration equipment and processes, including the revision of product design and work practice.	
Pending their effective implementation the duration of continuous exposure shall be reduced.	
(c) The Commission and the Member States will ensure a dynamic and coordinated application of the provisions of this Section.	
6. Individual protectors	
No adequate personal protective equipment against vibration is presently available ; when it becomes available, it shall be used.	
7. Information and training (Articles 7 and 9)	
Information and training of workers shall include at least :	
- why and how to detect and report signs of injury,	
- safe working practices to minimise exposure to vibration,	
- measures reducing the resulting risk.	
8. Health surveillance	

Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April
,	1994
(Article 11)	
Workers exposed to hand-arm vibration exceeding A(8) = 2,5 m.s ² are entitled to a health surveillance which aims at early detection of a vibration syndrome, and requires routine examinations.	Workers exposed to hand-arm vibration exceeding A(8) = 2,5 m.s ⁻² <u>shall have the</u> <u>right to regular health</u> surveillance <u>aimed</u> at early detection of a vibration syndrome, and reguires routine examinations.
Workers using work equipment referred to in Section 6b must be offered such a health surveillance.	
9. Work equipment (Article 12)	
The information referred to in Article 12 (2) (a) must include marking of the equipment which transmits to the hand-arm system a short- term (a few minutes)	
equivalent acceleration equal to or greater than 20 m.s ^{.1} .	
10. Interference (Article 13)	
The provisions of Article 13 (1) (b) shall apply in particula: where the vibration interferes with the proper handling of controls or reading of indicators.	The provisions of Article 13 <u>paragraph 2</u> shall apply in particular where the vibration interferes with the proper handling of controls or reading of indicators.
ll. Indirect risks (Article 13)	
The provisions of Article 13 (2) shall apply in particular when the vibration interferes with the stability of structures or the good holding of joints.	
12. Derogations (Article 14)	
 (a)During a period of five years with effect from the date set out in Article 18, Member States may grant derogations from Article 5 (3) (workers leaving workplaces where exposure remains excessive) where the state of the art does not allow the respect of the 	 (a)During a period of five years with effect from the date set out in Article 18, Member States may grant derogations from Article 5 (3) (workers leaving workplaces where exposure remains excessive) where the state of the art does not allow the respect of

-Page 24

riginal Commission Proposal	Amended proposal after the opinion of the EP on 20 April 1994
ceiling level.	the <u>exposure</u> <u>limit</u> <u>value</u> .
(b) The Commission and the	
Member States will ensure a	
dynamic and coordinated	
application of the provisions of this Section.	
B. Whole - Body Vibration	
1. Risk	a second s
This part of Annex II refers	
to the _isk to health and safety resulting from	
exposure to vibration	
transmitted to the whole	
body: low-back morbidity and	
trauma of the spine, as well	
as severe discomfort.	
The quantity used as a	
predictor of the hazard is	
the daily whole-body	
vibration exposure A(8)	
determined as in part A,	
using for ah,w(t) the vector sum (root sum square) of the	
values of 1,4 awx, 1,4 awy,	
awz where awx, awy, awz are	
the weighted root-mean square	
accelerations in the	
orthogonal axes X, Y, Z respectively as defined in	
ISO 2631. However, any term	
of the vector sum which is	
less than 66% of the highest	
one can be neglected.	
2. Values	
The threshold level is established at $A(8) = 0,25$	
established at $A(\delta) = 0.25$ m.s ⁴ .	
······································	
Subject to the provisions of	The exposure limit value is
article 13, the ceiling level	established at A(8) = 0,7 m.s ⁻² .
is established at $A(8) = 0,7$ m.s ² .	m.s
The action level is	
established at $A(8) = 0.5$	
m.s ² for :	
- providing the information	
mentioned in Article 7(2) to	
the workers likely to be	
exposed to this level ;	
- training in the	
implementation of measures	

Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April 1994
taken pursuant to this Directive (Article 9), for the benefit of workers likely to be exposed to this level;	
- providing information on the vibration produced by work equipment likely to give rise to such exposure during a reference duration of eight hours (Article 12 (2) (a));	
- the programme of technical and/or work organization measures aimed at reducing exposure (Article 5 (2)).	
Where whole-body exposure involves shocks or other vibration at high magnitudes during low durations, the corresponding action level is established as the hazard due to exposure during a period of one hour to a constant amplitude of 1,25 m.s ⁻⁺ .	
For applying the provisions of this section, it is considered that A(8) is likely to reach 0.5 m.s ⁻⁶ when the work equipment used transmits to the whole body a short term (a few minutes) equivalent acceleration equal to that numerical value.	•
3. Hazardous activities (Article 3)	3. <u>Activities with increased</u> <u>risk</u> (Article 3)
The provisions of Article 3 (4) apply to activities which result in a whole-body exposure equal to or greater than A(8) =1,25 m.s ² .	
4. Measurement and evaluation (Article 4)	
Where the level of vibration cannot be reliably quantified, the likelihood of exposure above the action levels must be evaluated (observation of working	
practices and information on the equipment used) in order to judge the risks involved. If an exposure above the action levels cannot be ruled out, the corresponding preventive measures must be	
implemented.	

-Page 26-

Original Commission Proposal	Amended proposal after the
	opinion of the EP on 20 April 1994
5. Reduction of the risk	
(Article 5)	
······································	
(a) As long as adequate and practical personal protective	
equipment is not available,	
the provisions aimed at	[1] A. A. Marketta, and A. Marketta, an And A. Marketta, and A. Markett
reducing the exposure shall	
be complemented by measures reducing the hazard arising	
from such exposure.	
(b) The Commission and the	
Member States will ensure a	
dynamic and coordinated	ALS AND ADD TO A DECEMBER OF A STATE
application of the provisions of this Section.	
6. Individual protectors	
No adequate personal	
protective equipment against	
vibration is presently available.	
7. Information and training	
(Articles 7 and 9)	
and the second secon

9. Extension of exposure	
(Article 13)	
The provisions of Article 13	
(1) (a) shall apply in	
particular where, owing to the nature of the activity, a	

Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April 1994
worker benefits from the use of rest facilities supervised by the employer ; whole-body vibration in these facilities must be reduced to a level compatible with their purpose and conditions of use, except in cases of "force majeure".	
10. Interference (Article 13)	
The provisions of Article 13 (1) (b) shall apply in particular where the vibration interferes with the proper handling of controls or reading of indicators.	The provisions of Article 13 <u>paragraph 2</u> shall apply in particular where the vibration interferes with the proper handling of controls or reading of indicators.
11. Indirect risks (Article 13)	
The provisions of Article 13 (2) shall apply in particular when the vibration interferes with the stability of structures or the good holding of joints.	
12. Derogations (Article 14)	
 (a)During a period of five years with effect from the date set out in Article 18, Member States may grant derogations from Article 5 (3) (workers leaving workplaces where exposure remain excessive) where the state of the art does not allow the respect of the ceiling levels. 	<pre>(a)During a period of five years with effect from the date set out in Article 18, Member States may grant derogations from Article 5 (3) (workers leaving workplaces where exposure remain excessive) where the state of the art does not allow the respect of the <u>exposure limit values</u>.</pre>
(b)The Commission and the Member States will ensure a dynamic and coordinated application of the provisions of this Section.	
ANNEX 3 : Optical radiation	
1. Rísk	
This Annex refers to the	
risk to the eye and to the skin, resulting from exposure to optical radiation (wavelength from 100 nm to 1 mm).	

-Page 28-

Original Commission Proposal	Amended proposal after the opinion of the EP on 20 April
	1994
The exposure of the target (eye or skin) to such	
radiation during a working day is used as a predictor of the hazard ; it is	
expressed, according to the case, in one of the	
following units : - watt per square meter,	
- joule per square meter,	
- watt per square meter and	
per steradian,	
 joule per square meter and per steradian. 	
2. Values (1)	
The ceiling levels are established at the	The <u>exposúre</u> <u>limit</u> <u>values</u> are established at the
threshold Level Values mentioned in A.C.G.I.H.	threshold Level Values mentioned in A.C.G.I.H.
1992 - 1993, pp 100 to 112 and 124 to 127.	1992 - 1993, pp 100 to 112 and 124 to 127.
The threshold levels are	The threshold levels are

	and an
Action levels are established at :	
- half the ceiling levels for :	- half the <u>exposure</u> <u>limit</u> values for :
- providing the information	
mentioned in Article 7 (2) to the workers likely to be exposed to these levels,	
- training in the	
implementation of measures taken pursuant to this	
Directivé (Article 9),	
- making personal protective equipment available (Article 6 (1));	
- providing information on	
the optical radiation produced by work equipment	
likely to give rise to such exposure during a reference	
duration of eight hours	
(Article 12 (2) (a)) ;	
(Article 12 (2) (a)) ; - the ceiling levels for :	- the <u>exposure limit</u> values for :
	- the <u>exposure</u> <u>limit</u> <u>values</u> for :

Original Commission Proposal	999 1967 - 34	Amended proposal after the opinion of the EP on 20 April 1994	
and the restriction of access (Article 8) in the case of man-made sources,			
- the programme of technical and/or work organization measures aimed at reducing exposure (Article 5 (2)).			
3. Hazardous activities		3. <u>Activities</u> with increased risk	
The provisions of Article 3 (4) apply to activities in which the exposure leads to a hazard equivalent to that due to a laser of class 3 B (according to IEC Publication 825, 1990).	222		· .
The operators of such sources must be trained (Article 9) and their competence must be checked.			
4. Personal protection (Article 6)			
Personal protective equipment must be used by workers who are likely to be exposed to optical radiation exceeding the ceiling levels.		Personal protective equipment must be used by workers who are likely to be exposed to optical radiation exceeding the <u>exposure limit</u> yalues .	, .
As far as exposure of the skin is concerned clothing may be considered as personal protective equipment in so far as it meets the protection objectives.			
5. Health Surveillance (Article 11)		· · · ·	
Workers exposed to optical radiation exceeding ½ the ceiling levels are entitled to a health surveillance which includes an eye check and aims at diagnosing any impairment by optical radiation and at preserving the vision.		Workers exposed to optical radiation exceeding ½ <u>the</u> <u>exposure limit values shall</u> <u>have the right to</u> <u>regular</u> health surveillance which includes an eye check and aims at diagnosing any impairment by optical radiation and at preserving the vision.	
6. Equipment (Article 12)		^	

ŧ

Original Commission Proposal	Amended proposal after the	
	opinion of the EP on 20 April 1994	
Any laser used at work must		
be labelled with its classification according to		
IEC Publication 825, 1990.		
Any man-made source likely		
to cause damage similar to that of a laser of class 3		L.
B or 4 must also be labelled accordingly.		
7. Interference		
(Article 13)

ANNEX 4 : Fields and waves		
1. Risk		
	, w _y , a set of the	

Original Commission Proposal		Amended proposal after the opinion of the EP on 20 April 1994	
This Annex refers to the risk to the health and safety due to the effects of electric fields and currents in the human body, as well as of absorption of energy, resulting from exposure to static and time-varying electric and magnetic fields with frequencies up to 300 GHz (1).		This Annex refers to the risk to the health and safety due to the effects of electric fields and currents in the human body, as well as of absorption of energy, resulting from exposure to static and time-varying electric and magnetic fields with frequencies up to 300 GHz (1) . This Annex does not cover	•
		the potential carcinogenic effects due to exposure to time varying electric and magnetic fields for which there is no scientific	
		evidence establishing a causal relationship or providing a basis for risk assessment.	
The quantities used as predictors of the hazard are :			1
- the current density, expressed in the unit ampere per square metre,			
- the current passing through any one foot or hand in contact with a conducting object, expressed in the unit ampere,			• • •
- the specific absorption rate (SAR) of electromagnetic energy, expressed in the unit watt per kilogram,			•
- the specific absorption (SA) of electromagnetic energy, expressed in the unit joule per kilogram.			
Quantities which can be obtained directly by means of a measuring instrument are used to specify action levels :	•		· . , .
- the magnetic field strength H, expressed in the unit ampere per metre,			
 the magnetic flux density B, expressed in the unit tesla, 	• .		, , ,
- the electric field strength E, expressed in the unit volt per metre,			
- the power (surface)	•		
1	······	1	-Page 3

.

· · · · · · · · · · · · · · · · · · ·		<u> </u>
Original Commission Proposal		Amended proposal after the opinion of the EP on 20 April 1994
density P in free-space and far-field conditions, expressed in the unit watt per square metre.		
2. Values	-	
The ceiling levels are established as follows (all conditions to be satisfied) :		The <u>exposure limit values</u> are established as follows (all conditions to be satisfied) :
- the values of Table 1 for:		
- the induced current density in head and trunk,		
- the contact current averaged over a period of one second ; the peak value may not exceed 10 times the average value,		
- the average over the whole body, as well as the local peaks in the limbs and in the head and trunk, of the SAR averaged over any six minute period,		
- a SA of 10 m J.kg-1 due to a pulse of less than 30- ms duration of microwaves at frequencies above 300 MHz.		
As regards mobile radio equipment, the particularities of conditions of use and the rapidity of technological changes require that the ceiling levels be determined following further consideration.		<u>Delete</u>
The threshold levels are established at 1/5 the ceiling levels.		The threshold levels are established at 1/5 the <u>exposure limit</u> values .
Action levels are established at :		
- the values of table 2 for :	S.,	$- \frac{1/2}{1}$ the values of table 2 for :
- providing the information mentioned in Article 7 (2) to workers likely to be exposed to these levels,		
- training in the implementation of measures		
		·

		ŧ
Original Commission Proposal		Amended proposal after the opinion of the EP on 20 April 1994
taken pursuant to this Directive (Article 9), - providing personal protective equipment	· . · .	
(Article 6 (1)), - providing information on the fields and waves produced by work equipment likely to result in such values (Article 12 (2)(a)),	• • •	
- 1,6 times the values of H, B or E in table 2 for :	· · ·	- <u>the values</u> of H, B or E in table 2 for :
- the programme of technical and/or work organization measures aimed at reducing exposure (Article 5 (2)),		
 the delimiting of areas and the restriction of access (Article 8), 		
 training of the operators (Article 9) and checking of their competence. 		
3. Hazardous activities		3. <u>Activities</u> with increased risk
The provisions of Article 3 (4) apply to activities requiring the use of work equipment which exposes workers to fields exceeding three times the values of H, B or E in table 2.		The provisions of Article 3 (4) apply to activities requiring the use of work equipment which exposes workers to fields exceeding 1.6 times the values of H, B or E in table 2.
4. Measurement (Article 4)		
Body current densities, SAR and SA are, for practical purposes, estimated from measured derived quantities (e.g. electric and magnetic field strengths) which must reflect realistic exposure situations.		
The Commission and the Member States will ensure the coordinated definition of a suitable metrology.	• •	
5. Reduction of exposure; personal protection		

-Page 34-

Original Commission Proposal		Amended proposal after the opinion of the EP on 20 April 1994
(Articles 5 and 6)		
Personal protective equipment must be used by workers who are likely to be exposed to electric fields in which the ceiling levels would be exceeded.		Personal protective equipment must be used by workers who are likely to be exposed to electric fields in which the <u>exposure limit values</u> would be exceeded.
		Would be exceeded.
There is no adequate and practical way to shield against magnetic field		
exposure.		
6. Information of workers (Article 7 (2))		
Workers exposed to an electric field above 5 kVm- 1 must be informed that apparently harmless		
perception effects on the surface of the body may occur.		
7. Work Equipment		
(Article 12)		
The information referred to in Article 12 (2) (a) must include marking of the equipment likely to produce fields exceeding three times the values of H, B or E in table 2.		The information referred to in Article 12 (2) (a) must include marking of the equipment likely to produce fields exceeding <u>1,6</u> times the values of H, B or E in table 2.
8. Indirect risks (Article 13)		
The provisions of Article 13 (2) shall apply in particular where electromagnetic fields are		
likely to result in fire or explosion due to induced currents or voltages, e.g. when structures are electrically charged, or		
when using electroexplosive devices.	· · · · ·	
(1) Hazards resulting from contact with live conductors are not covered
