

COMMISSION OF THE EUROPEAN COMMUNITIES

NOV. 13 1978

COM (78) 402 FINAL

Brussels, 12 September 1978

THE COMMUNITY'S ENERGY SUPPLIES

FIRST HALF OF 1977 (ESTIMATES), SECOND HALF OF 1977 (ESTIMATES),

FIRST HALF OF 1978 (FORECASTS).

COM (78) 402 FINAL

SUMMARY

1. The attached report is the summary of the information obtained under Regulation (EEC) No 1729/76, adopted by the Council on 21 June 1976.
2. This document gives a brief account of the experience gained when the Regulation was implemented for the third and fourth time (September 1977 and March 1978). Late receipt of replies from some Member States explains why separate reports were not issued for each of these occasions.
3. The report provides a summary of the information from Member States. It shows that during 1977 the Community's inland consumption of energy was estimated to have increased by 0.4% as compared with 1976. For the first half of 1978, the Community's inland consumption of energy is estimated to increase by 1.3% compared with the same period in 1977.

The report indicates that the Community's net imports of energy in the first half of 1978 should be some 2% lower than in the first half of 1977; indeed net oil imports are expected to fall by about 4%. This is due to the very considerable increase in Community oil production which, from just below 26 m toe in the second half of 1977, is expected to rise to about 33 m toe in the first half of 1978. Stocks of energy products held in the Community at the end of June 1978 should represent - on the basis of inland requirements in 1977 - about 105 days' consumption of solid fuels, 88 days' consumption of oil products and 18 days' consumption of natural gas.

4. The information supplied is summarized for each country in the form of tables and diagrams in an Annex to the report.

The Community's energy supplies - first half of 1977
(estimates), second half of 1977 (estimates), first
half of 1978 (forecasts)

1. Regulation (EEC) No 1729/76, adopted by the Council on 21 June 1976, requires the Member States to communicate to the Commission twice a year the information concerning their energy supply situations in the form of estimates for the preceding calendar half-year and forecasts for the current half-year. The Regulation also states that the Commission shall transmit to the Member States a summary of the information received.
2. The estimates concerning the energy market in the first half of 1977 and the forecasts for the second half of 1977 should have been sent by 1 September 1977; this information reached the Commission between 16 August 1977 and 21 January 1978. The late receipt of some of the information required led the Director General for Energy to address a letter to the Member States on 6 February 1978 in which he reminded them of their obligations and underlined:
 - the Commission's desire for the time limits for replies laid down in the Regulation to be adhered to whenever the Regulation was implemented in future;
 - the Commission's decision not to publish the summary of information obtained when the Regulation was implemented for the third time (first and second half-years of 1977) until the issue of the report on the fourth implementation of the Regulation, planned for 1 March 1978.
3. The fourth implementation of the Regulation was encouraging as almost all the information was available at the end of March, with the exception of one country for which only part of the information could be supplied within the stipulated time limit while the remainder was not available until early May 1978. This can be assumed to be a passing difficulty which should not last; as a result, a report based on the information obtained within the set time limit will be issued in future on a regular six-month basis and without excessive delay.

4. The tables and graphs which follow provide a definitive summary of the information arising from the third and fourth applications (September 1977 and March 1978) of Regulation (EEC) No 1729/76 (1).

The data received from Member States on both halves of 1977 have been compared, on a Community basis, with the 1976 data. Comparison of the estimates supplied by the Member States with the latest statistics for 1977 also confirms their reliability. The table below shows that gross inland consumption was estimated to have risen by 0.4 per cent in 1977 - an estimate which is close to the Statistical Office (SOEC) estimate of an increase of only 0.1% in that year.

Community/million toe or %	1976 (2)	I/1977 +II/1977 Reg. 1729	1977- 1976 % change
Inland production	398.2	428.8	+ 7.7
Net imports	561.2	531.9	- 5.2
Changes in stocks	- 10.4	- 8.4	-
Bunkers	32.0	31.4	- 1.9
Gross inland consumption	917.0	920.9	+ 0.4

(1) Council Regulation (EEC) No 1729/76 of 21 June 1976 concerning the communication of information on the Community's energy supplies, published in the Official Journal of the European Communities, No L 198, 23 July 1976.

(2) Eurostat.

5. The information received in March 1978 included forecasts for the first half of 1978. From this information, compared with the estimates previously supplied for the first half of 1977, it was possible to derive the following movements for the Community as a whole:

Community/million toe or %	Reg. 1729/76 I/1977 Sept. 1977	Reg. 1729/76 I/1978 March 1978	I-1978/ I-1977 % change
Inland production	218.0	225.4	+ 3.4
Net imports	268.2	262.3	- 2.2
Changes in stocks	+ 3.1	+ 7.1	-
Bunkers	16.2	15.7	- 3.1
Gross inland consumption (6 months)	473.1	479.1	+ 1.3

The inland consumption of primary energy for each of the energy sources is as follows:

Community/million toe or %	Reg. 1729/76 I/1977 Sept. 1977	Reg. 1729/76 I/1978 March 1978	I-1978/ I-1977 % change
Hard coal and equivalents	89.7	91.4	+ 1.9
Lignite and equivalents	13.0	13.7	+ 5.4
Crude oil and equivalents	253.3	255.4	+ 0.8
Natural gas and equivalents	83.9	88.5	+ 5.4
Nuclear	13.6	13.7	+ 0.7
Hydroelectric, geothermal and others	19.6	16.4	-16.3
Total gross inland consumption (6 months)	473.1	479.1	+ 1.3

6. According to the information from Member States, the Community's net imports of energy in the first half of 1978 should be below the level in the first half of 1977; there should be a fall of about 4% in net oil imports. This is due to the very appreciable increase in Community oil production which, from just below 26 million toe in the second half of 1977, is expected to rise to about 33 million toe in the first half of 1978. Stocks of energy products held in the Community at the end of June 1978 should represent - on the basis of inland requirements recorded in 1977 - about 105 days' consumption of solid fuels, 88 days' consumption of oil products and 18 days' consumption of natural gas.

Annexes: 1. Summary of replies to the questionnaire from Regulation 1729/76

- Gross inland consumption
- Production of primary sources
- Net imports
- Stocks

2. Graphs of energy production and consumption
