PRELIMINARY STUDY /a

CHEMICAL BUY BACK AGREEMENTS
AND THEIR POTENTIAL IMPACT
ON THE
EC PETROCHEMICALS MARKETS

STATE : End of July 1978

III-A-2

During recent discussions and for various reasons adjustments of some figures have been necessary.

These are provisionally done by replacing pages 5 and 25.

Corresponding adjustments of the fact sheets will be done with an eventual updating of the preliminary study in summer 79.

CHEMICAL BUY BACK AGREEMENTS WITH C.M.E.A. COUNTRIES

AND THEIR IMPACT ON THE EC PETROCHEMICALS MARKETS

I. The Buy Back Phenomenon	1
- Scope of the study	2
- Information sources used	2
- Advantages and disadvantages for interested economic operators	3
- Synthesis of results	5
- Products involved into chemical Buy Back agreements	8
II. Buy Back Scenario CMEA - EC	9 - 22
as related to capacities, capacity utilisation, production, demand, and trade by product.	
III. Actual Import and Future EC-Buy Back Import from CMEA Countries related to EC Demand 1977	23 - 26
Chemical Buy Back quantified in relation to	
- Actual real market share of imports from CMEA Countries (1977; without Buy Back)	
- Future market share with respect to 1977 demand (only Buy Back) not comprising normal trade	
given in order of decreasing impact by product.	
IV. FACT SHEETS	27 - 36
Buy Back information :	
. Value of total real and potential chemical Buy Back export from CMEA Countries (Profile over the time space covered by contracts 1978-1994)	
. Value of chemical Buy Back by CMEA Member Countries	
V. FACT SHEETS	37 - 63
Buy Back information by products concerned.	
VI. FACT SHEETS	64 - 88
Product profiles with economic indicators for CMEA and EC Member Countries.	

I. THE CHEMICAL BUY BACK PHENOMENON

- Scope of the study
- information sources used
- advantages and disadvantages
for interested economic operators
- synthesis of results
- products involved into chemical buy back agreements

SCOPE OF THE STUDY :

Since the very early seventies, Eastern European Countries due to their lack of foreign currency, their pressing needs to satisfy rising consumption pressure and to promote industrial development chose a formula for industrial cooperation with western industrialised countries, which raised concern increasingly among economic operators involved and which gained a fairly large publicity under the denominations :

- buy back deals
- barter trading
- compensation agreements.

Barter trading is the exchange of goods without interference of a monetary system. It is defined apparently in a larger sense (virtually no relation necessary between the goods exchanged) than buy back deals and, respectively, compensation agreements which mean in relation to the phenomenon studied here, chemical plant construction by a western contractor, including the know how and process licences, and taking back product as partial or total payment for the services supplied in form of product of the particular plant in question.

As the concern about the possible impact of such deals on EC petrochemical's markets created more and more concern, particularly among the chemical industry of the Community, the Commission undertook

- the collection of all available chemical buy back information
- and to put it into a quantitative relationship to relevant economic indicators such a trade, capacities, production and demand.

INFORMATION SOURCES USED :

Up to now, the buy back volumes contracted as well as the project contracts concluded or under discussion had been known fairly well through the specialised press, particularly the chemical project information of "European Chemical News" and various other similar sources together with a very precious effort of the commercial attachés of the EC Member countries to the Soviet Union

(Council document S/1046/78; RCC 110 as of June 19, 1978) but also with an OECD inventory of buy back deals, larger in scope than mere cases of chemical buy back, comprising also other industrial sectors.

Other sources of information exploited were e.g. Financial Times, private communication from individual chemical companies, in general the information system of the Commission's services.

There is one very important question mark for the overall evaluation : in order to establish a complete idea of chemical buy back relevance between CMEA and EC, one should know the size of CMEA markets for the individual petrochemicals contracted in order to quantify the amount virtually available for export from the CMEA region. This is an unknown variable for all the products studied and this is the reason why the average annual buy back volume contracted had to be related to indicators which were available. These were essentially

- trade in these products between CMEA and EC (from Nimex Statistics)*
- actual and potential future shares of respective EC demand.

~~Indications about how to overcome this lacuna are given below with possible options.~~

To our knowledge, this is the first time that buy back volumes have been related in a coherent way to trade, capacities, production, and demand.

Advantages and disadvantages for interested economic operators

On very numerous occasions the political and qualitative aspects of compensation agreements have been discussed. In the interest of the context given here it is not necessary to repeat them here except for the advantages and disadvantages to the interested economic operators involved either directly or indirectly.

. / .

*) N.B. The Nimex Statistics do not include intra-German trade between the German Democratic Republic and the Federal Republic of Germany.

Compensation agreements are apparently attractive to the East because

- they allow industrial development unimpeded by lack of foreign currency
- the investment is geared towards exportable production to pay for debts
- the problems of commercialisation of output, or after sales services are shifted away to western undertakings and conveniently and completely solved (generally with a rebate for commercialization on world market prices)
- there is a serious chance to compete with western companies.

Advantages for the rest are going directly to the industrial consumer and the plant and process market.

The western producers, evidently, see their markets put under considerable stress for the imminent and longer term future, not only with respect to volume but particularly with respect to prices, which raises a good deal of concern if one looks at 1977 rates of capacity utilizations for these products in the EC.

But these are not the only disadvantages to industry : Governments are involved with a very apparent risk to distort competition.

There remains another disadvantage, political and ideological in nature :

Are trade policy making people ready to accept a principle of plannified economy ideology i.e. to plannify trade over 12 or 15 years irrespective of future market behaviour ?

Time spaces of 20 years are under discussion.

SYNTHESIS OF RESULTS :

The volume of chemical buy back agreements with CMEA countries amounts to

14081 Mio \$

running from 197⁴ to 1994
for signed projects and

2652 Mio \$

running over the same period for
buy back agreements still under discussion.

It may be assumed that on the basis of known contracts and projects a total of 16733 Mio \$ worth of products will come into the west from the east under buy back agreements.

Very rapid EC market share increases might have to be expected for products like

Urea from 7 to 40, 8 % . with a 1977 EC capacity utilisation of 68 % (comparing to the EC capacity rate of utilisation for chemical fibers of 64 %)

Methanol from 2,6 to 35,8 % EC cap. util. 1977 : 70 %

Caprolactam from 0,5 to 7,8 % EC cap. util. 1977 : 67 %

Ammonia from 0,2 to 6 % EC cap. util. 1977 : 79 %

Soda ash from 3,8 to 8,6 % EC cap. util. 1977 : 82 %

Para Xylene from 2,2 to 10,2 % EC cap. util. 1977 : 62 %

Ortho Xylene from 1,1 to 5 % EC cap. util. 1977 : 62 %

Maleic anhyd. from 0,3 to 3,8 % EC cap. util. 1977 : 53 %

Polystyrene from 0,3 to 2,3 % EC cap. util. 1977 : 60 %

Polypropylene from 0,15 to 1 % EC cap. util. 1977 : 60 %

SYNTHESIS OF RESULTS :

The volume of chemical buy back agreements with CMEA countries amounts to

14081 Mio \$ running from 1978 to 1994
for signed projects and

2652 Mio \$ running over the same period for
buy back agreements still under discussion.

It may be assumed that on the basis of known contracts and projects a total of 16733 Mio \$ worth of products will come into the west from the east under buy back agreements.

Very rapid EC market share increases might have to be expected for products like

Urea	from 3,3 to 19 %	with a 1977 EC capacity utilisation of 68 % (comparing to the EC capacity rate of utilisation for chemical fibers of 64 %)
Methanol	from 2,6 to 21,3 %	EC cap. util. 1977 : 70 %
Caprolactam	from 0,5 to 7,8 %	EC cap. util. 1977 : 67 %
Ammonia	from 0,15 to 5 %	EC cap. util. 1977 : 79 %
Soda ash	from 3,8 to 8,6 %	EC cap. util. 1977 : 82 %
Para Xylene	from 2,2 to 10,2 %	EC cap. util. 1977 : 62 %
Ortho Xylene	from 1,1 to 5 %	EC cap. util. 1977 : 62 %
Maleic anhyd.	from 0,3 to 3,8 %	EC cap. util. 1977 : 53 %
Polystyrene	from 0,3 to 2,3 %	EC cap. util. 1977 : 60 %
Polypropylene	from 0,15 to 1 %	EC cap. util. 1977 : 60 %

It has to be kept in mind that these figures represent a hypothetical annual average. There may be overall volume concentrations from 1981 to 1990 with a flat peak from 1985 to 1987, where the highest overall volume range will be reached. (1986 : 1,339 billion \$).

The main country involved is above all the Soviet Union with a share of 13326 Mio US \$ out of 16733 Mio \$ which is equivalent to 80 % of all contracts signed and under negotiation.

The Soviet Union is followed in importance by Poland, taking a share of 2786 Mio \$ equivalent to 17 % of all contracts signed and under negotiation. The rest is shared by other CMEA member countries.

This may be summarised in the following table :

COUNTRY	Value of buy back Mio \$ (signed and under negotiation)	% share in total
Soviet Union	13326	80
Poland	2786	17
East Germany	500	3
Bulgaria	49	0,3
CSSR	52	0,3
Romania	20	0,1
Hungary *)		
CMEA	16733	

The time space for the bulk of the considered contracts is concentrated essentially on a time period running from 1978 to 1990. Two agreements (Occidental) run until 1997 and the Tomsk deal is supposed to run until 2000.

It is very important to note that in the total of 16733 Mio \$

- US contracts amount to 8075 Mio \$
- and Japanese contracts to 446 Mio \$.

*) Hungary has concluded or under discussion some agreements, but no details are available.

.../...

Furthermore, the total of US contract value considered here are two deals of Occidental with the Soviet Union and Poland which do not relate to plant building projects but to swap deals

- for superphosphoric acid / ammonia, urea and potash (Soviet Union) and
- for phosphate rock / sulphur (Poland).

To our knowledge there are no buy back deals concluded up to now for US plant building in CMEA countries.

With regard to the Tomsk project, the buy back volume under negotiation has entered into the balance drawn here with 1,5 billion \$. According to more recent information, this is too low and could well reach a volume of 3 billion \$ to be paid back in a few years only. Linked to that is also a problem still pending : a large part of the commercialisation of the Tomsk production will be linked to the deal over a very long period. This is not comprised in our balance either. But in any event, with the Tomsk project being uncertain in volume still, this analysis of buy back deals is moving rather on the lower edge than on the higher edge of estimation.

The share of EC member countries in buy back deals is as follows

Federal Republic of Germany	1,682 billion \$*
France	2,582 billion \$
Italy	0,912 billion \$
United Kingdom	0,512 billion \$

* without the Tomsk project. With a low estimation for Tomsk of 1,5 billion \$ the total of the German share could reach a little more than 3 billion \$, whereas with a more realistic estimate for the Tomsk buy back volume the total of the German share could well reach 4,6 billion \$.

PRODUCTS INVOLVED INTO BUY BACK AGREEMENTS

- Ammonia)
Urea)
Calcium Ammonium nitrate) **Fertilizers**

 - Propylene)
Benzene)
Para Xylene)
Ortho Xylene) **Basic petrochemicals :
olefins and aromatics**

 - Methanol)
Maleic anhydride)
Phthalic anhydride)
Ethylene glycol) **Important petrochemical
intermediates**

 - Acrylonitrile)
Vinylchloride monomer (VCM))
Caprolactam)
Dimethylterephthalate) **Important precursors for polymers
and chemical fibers**

 - Polyethylene Low Density)
Polyethylene High Density)
Polypropylene)
Polystyrene)
Polyvinylchloride) **Bulk polymers (thermoplastics)**

 - Polyester fibers) **Chemical fibers**

 - Titanium dioxide)
Caustic Soda (Sodium hydroxide))
Soda Ash (Sodium carbonate)) **Important inorganica**
-

II. BUY BACK SCENARIO CMEA - EC

as related to installed and projected capacities, production, capacity utilisation, demand and extra-Community trade by product.

- For each product there is a first block of lines comparing economic indicators of EC with those of CMEA. When CMEA figures are put in round brackets, this means that they give only order of magnitude.

The EC capacities are given in 1000 metric tons per year for the state of beginning 1978.

The indications for new plants and projects are taken from the periodical European Chemical News Chemscape International Project Review which lists new plants put into operation since the beginning of 1977 together with projects firmly contracted. These figures give an idea of economic innovative impact for the corresponding product.

Production is given in 1000 metric tons per year together with capacity utilization rates in round brackets and percent.

Demand is given in 1000 metric tons per year as apparent consumption.

Trade figures have been taken from 1976 and 1977 Nimexe statistics and given in volume (tons) and value (1000 units of account).

Figures given in brackets here indicate

- the share of EC exports to the CMEA countries within total extra Community exports (importance of CMEA countries as trading partner for the corresponding product).
- the share of EC imports from CMEA countries within total extra community imports.

The last column gives an indication for the extra community trade balance for 1977 in 1000 metric tons for 1977 for each product.

- For each product there is a second block in the tables containing the buy back information gathered. This information gives
 - the total volume firmly contracted in metric tons, the period of years covered by all contracts (from the earliest contract starting to the latest contract expiring);
 - corresponding information for contracts still under discussion;
 - the total volumes have been divided by the time space covered of all corresponding contracts and the resulting figure (as a theoretical future average annual buy back volume) related to EC demand for 1977. So the annual buy back volume is expressed in terms of 1977 market share, both for those contract firmly concluded and those still under discussion.

It is important to note that the buy back volumes indicated are buy back products contracted by firms from member countries and consequently going to the European Community.

III. ACTUAL EC-IMPORT AND FUTURE EC-BUY BACK IMPORT FROM CMEA COUNTRIES RELATED TO EC DEMAND 1977

Chemical buy-back quantified in relation to

- actual real market share of imports from CMEA countries (1977; virtually without buy back)
- future hypothetical market share with respect to 1977 demand (only buy-back; not comprising normal trade) given in order of decreasing impact by product.

The columns indicate

- EC commercial balance for 1977 in 1000 metric tons giving the difference of extra-community exports and extra-community imports and taken from Nimex statistics.
- EC demand for 1977 in 1000 metric tons taken from EC information system.
- EC imports from CMEA countries
 - . in 1000 metric tons for 1977
 - . in terms of percentage of EC demand 1977
 - . annual average buy-back volume in 1000 metric tons with year starting in round brackets.

Wherever possible firmly contracted buy-back volumes have been differentiated from those still under discussion.

- . average annual buy-back volumes related to 1977 EC demand
- for comparison, the EC rate of capacity utilisation is given for 1977 in percent and for the corresponding product. This information indicates roughly the degree of difficulty of the product with respect to Community overcapacity.

- For each product there is a second block in the tables containing the buy back information gathered. This information gives
 - the total volume firmly contracted in metric tons, the period of years covered by all contracts (from the earliest contract starting to the latest contract expiring);
 - corresponding information for contracts still under discussion;
 - the total volumes have been divided by the time space covered of all corresponding contracts and the resulting figure (as a theoretical future average annual buy back volume) related to EC demand for 1977. So the annual buy back volume is expressed in terms of 1977 market share, both for those contract firmly concluded and those still under discussion.

It is important to note that the buy back volumes indicated are buy back products contracted by firms from member countries and consequently going to the European Community.

VI. FACT SHEETS :

A breakdown of economic indicators into product profiles for all individual CMEA and EC member countries.

The information is particularly scarce about demand in CMEA member countries.

The columns indicate :

- installed capacity in 1000 t/a for 1978
- new plants and projects in 1000 t/a capacity :
this information comprises new plants having come on stream since the beginning of 1977 together with project firmly contracted (state : february 1978). This information gives an indication of the economic innovation for the corresponding product market.
- production in 1000 t/a for 1977
- demand in 1000 t/a for 1977
- trade figures for the individual product and for 1976 and 1977 taken from Nimexe statistics, giving Community export and import by quantity and value with CMEA as a whole, but with a breakdown for Community member countries.
The figures given in round brackets on the line for EC indicate the share of trade with Comecon within extra EC export and imports.
- Summary buy-back information.
Wherever non Community buy-back is involved, this is indicated.
