FOREWORD

ON THE "1971/72" FADN RESULTS

The presentation of the survey results obtained by the Farm Accountancy Data Network for the years "1971" and "1972" marks the end of the system's "running-in" period, which has lasted for five years during which significant progress has been made. Despite improvements, the results obtained for these two latter years are still limited in scope, mainly because the sample still does not cover the entire field of survey. Complete coverage will not be achieved until "1978", after an increase in the number of returning holdings; from "1975" onwards, this number will gradually rise from 13,600 to 28,000.

The form of presentation of the "1971" and "1972" results follows that for the three years "1968", "1969" and "1970". Only the six members of the original Community are covered. However, from "1973" onwards the network will provide data for the whole of the enlarged Community.

In presenting the results for "1971" and "1972", account was taken as far as possible of remarks and suggestions made in relation to the presentation of the accountancy data for the preceding years. Nevertheless, it was decided to retain the same layout as before to facilitate comparisons between the results for the first five years of operation.

In view of the importance of VAT as an instrument of agricultural policy in certain countries and its increasing effect on farm incomes in those countries, receipts and payments of VAT were taken into account in determining incomes. For this reason the survey results for "1971" and "1972" are not fully comparable to those of the three preceding years. In addition, the data were supplemented by a series of detailed figures concerning farm costs (inputs), whose recent trends are especially significant. A knowledge of the cost structures of various types of farming provides a useful frame of reference in the present situation, if only with a view to assessing the impact of the profound changes at present occurring.

It was once more found impossible to reduce the delay in publishing these results to any great extent, despite praiseworthy efforts by a number of Member States to speed up the collection and processing of data. This delay - almost two years from the closing date of the last year under consideration - would have seemed considerable, not to say excessive, in a period of normal economic progress. Under existing circumstances, the present publication must seem almost anachronistic - especially since the trend shown for income growth certainly no longer corresponds to reality. Nevertheless, the publication is undoubtedly of interest for all who are seeking to analyse the present, since it constitutes the only solid basis available to the Community authorities from which recent trends may be extrapolated to arrive at a concrete and objective assessment of the current situation. Efforts should now be directed towards the search for techniques to bring these two-year-old figures up-to-date. As has been the case in a number of Member States, this research will result in substantial progress in forecasting techniques, from which readers of future reports on the results of the Accountancy Data Network will benefit.

The Farm Accountancy Data Network has gradually acquired an essential role in the orientation and management of the Common Agricultural Policy, since farm incomes - of which its task is to determine the trends and absolute levels - have in recent years become objective criteria for that policy, both in relation to structures and in relation to prices. This leading role conferred on the network implies that efforts must be redoubled to make it fully representative of the field of survey it is supposed to cover. The experience of the past five years is full of lessons from which the Commission is ready to profit to perfect the system, making it ever more effective. To this end, the Commission will be happy to receive remarks or suggestions from any authorities or persons directly concerned by the results.

I. FIELD OF SURVEY OF THE FARM ACCOUNTANCY DATA NETWORK

1. The network's field of survey covers holdings concerned with marketing their produce, and to which the operators devote the greater part of their activities.

The number of holdings included in "1971" and "1972" was the same as in previous years; it was therefore, as before, insufficient to represent the field of survey adequately. In the years "1971" and "1972", the field of survey was restricted to holdings of more than 5 hectares except for those devoted to the production of wine, fruit, vegetables and olives (1).

2. On the basis of the latest statistical information available, mainly arising from the last general agricultural census, it may be estimated that around 1970 the restricted field of survey covered approximately 3 million farms in the Community as a whole (2).

---

(1) The restricted field of survey will continue in force until the year "1974", the last before the entry into force of Council Regulation No. 2910/73, under the terms of which the number of returning holdings will gradually be increased between "1975" and "1978".

(2) In contrast to the work carried out on the basis of the earlier Community Survey of Farm Structures (1966/67), the results of the general agricultural census of 1970 were not systematically analysed in accordance with the Community scheme of classification in all Member States. The number of holdings covered by the field of survey around 1970 had therefore to be estimated and does not include holdings of less than 5 hectares in Germany.

3. The total number of holdings covered by the field of survey declined by about 22% between 1966/67 and 1970. This striking trend especially concerned certain categories of holdings. In general, rates of decline were sharpest in the smaller farms, but certain types of farming seem to have been especially sensitive to the overall trend.
4. The trend, from 1966/67 to 1970, of the number of holdings of more than 5 hectares covered by the field of survey is shown below, with a breakdown by size and by type of farming (1):

± % (1966/67) = 100

Type of farming	5-10	10-20	20-50	≥ 50 ha
111 General Agriculture	-41	-10	+10	+23
130 Arable Land - Grazing Stock	-51	-33	-8	-1
310 Grazing Stock - Arable Land	-36	-33	-10	0
336 Cattle	-39	-12	+16	+29
340 Grazing Stock - Pigs and Poultry	-47	-28	+3	+10
430 Pigs and Poultry - Grazing Stock	-46	-28	+16	+35
112 Horticulture	-6	+15	+13	-26
223 Fruit	-29	-19	-11	+19
224 Vines	-16	+8	+25	+3
TOTAL	-42	-23	+4	+15

---

(1) Excluding Italy, since results corresponding to the Community's scheme of classification are not yet available.

II. ACCOUNTANCY SAMPLE FOR "1971" AND "1972"

5. The number of returning holdings selected was 11,533 for the "1971" accounting year and 11,622 for the "1972" accounting year.

The holdings selected were drawn from Member States as follows:

	<u>"1971"</u>	<u>"1972"</u>	<u>"1972" (%)</u>
Germany	2,340	2,308	20
France	3,359	3,427	29
Italy	4,153	4,169	36
Belgium	614	633	5
Luxembourg	60	60	1
Netherlands	1,007	1,025	9
EEC (Six)	<u>11,533</u>	<u>11,622</u>	<u>100</u>

6. The number of farm returns transmitted to the Commission and included in the sample, after checking the validity of the information contained (in properly completed returns), amounted to 10,134 in "1971" and 10,287 in "1972".

The farm returns included were drawn from Member States as follows:

	<u>"1971"</u>	<u>"1972"</u>	<u>"1972" (%)</u>
Germany	2,047	2,050	20
France	2,905	3,133	30
Italy	3,696	3,579	35
Belgium	551	565	5
Luxembourg	53	54	1
Netherlands	882	906	9
Total farm returns	<u>10,134</u>	<u>10,287</u>	<u>100</u>

7. The annual rate of wastage of the accountancy sample (the difference between the number of farm returns properly completed and the number of holdings selected expressed as a percentage of the latter) for the two years under consideration was between 9% and 14%, according to country. The average rate for the six Member States declined from 12% in "1971" to 11% in "1972", confirming the trend noted in 1970 in relation to the two preceding years.

Annual rate of wastage of the accountancy sample

	<u>"1971"</u>	<u>"1972"</u>
Germany	13%	11%
France	14%	9%
Italy	11%	14%
Belgium	10%	11%
Luxembourg	12%	10%
Netherlands	12%	12%
EEC (Six)	<u>12%</u>	<u>11%</u>
	===	===

8. For general analyses of the economic situation and particularly of farm incomes, the returns are considered as a whole; sub-groups can be taken where significant in relation to the aspects under study.
9. For the breakdown into groups of holdings of the "1971" and "1972" results (1), as for preceding years the returns were only taken into account where they corresponded to groups of at least ten returning holdings. The number included was 8,501 in "1971" and 8,752 in "1972", corresponding to approximately 85% of the total number of farm returns properly completed (2).

---

(1) "Groups of holdings" means a group of farms belonging to a given farming type category, a given size category and a given division

(2) This proportion should increase once the sample covers the entire field of survey.

10. The farm returns included were divided into farming type categories and size categories as follows:

a) <u>Predominant type of farming</u>	<u>"1971"</u>	<u>"1972"</u>	<u>"1972" (%)</u>
Arable, general agriculture and horticulture	1,518	1,538	17,6
Permanent Crops	1,875	1,881	21,5
Grazing Stock	4,578	4,729	54,0
Pigs, Poultry	530	604	6,9
	<u>8,501</u>	<u>8,752</u>	<u>100</u>
b) <u>Size category (UAA)</u>			
< 5 ha	1,131	1,186	13,5
5 - 10 ha	1,558	1,458	16,7
10 - 20 ha	2,640	2,564	29,3
20 - 50 ha	2,597	2,856	32,6
≥ 50 ha	575	688	7,9
Total farm returns	<u>8,501</u>	<u>8,752</u>	<u>100</u>

11. A certain number of groups of holdings included in the selection of returning holdings by the regional committees (42 groups in "1971" and 40 groups in "1972") do not, however, appear in the results as presented. On the other hand, several groups not selected by the regional committees have been included (33 groups for "1971" and 20 for "1972") (1).

The inclusion and exclusion of certain groups of holdings, irrespective of the original guidelines on the basis of which the sample was selected, is mainly due to two factors: firstly,

---

(1) Since the holdings concerned were not specifically selected to represent the groups in question, the validity of the related data for these groups must be considered doubtful.

the annual wastage of the accountancy sample; and secondly, the reclassification of returning holdings in the light of the information given in the farm returns. These two factors together have resulted in the number of returning holdings in certain groups falling below ten - the threshold adopted in presenting the average group results. The reclassification of holdings has also brought about certain changes in the classifications themselves as initially adopted by the regional committees for the purposes of selection; in certain cases, this has given rise to groups of ten or more returning holdings belonging to categories whose representation had not been provided for originally. Therefore the average results for these new groups cannot always be considered as valid.

12. The number of groups of holdings of ten or more returning holdings ultimately amounted to 309 in "1971" and 316 in "1972". This number has in fact scarcely changed during the four accounting years "1969" to "1972" (1).

The stability of the number of groups of holdings in the network during the past four accounting years does not, however, imply complete continuity in the accountancy sample. Out of approximately 300 groups represented in "1971" and "1972", about a hundred have not been continuously in the sample throughout "1969" to "1972" (2).

The groups of holdings represented in "1971" and "1972" may be divided as follows according to main types of production:

---

(1) 304 groups were represented in "1969" and 313 in "1970".

(2) 203 groups of holdings were represented throughout the period "1969" - "1972".

	<u>"1971"</u>	<u>"1972"</u>	<u>"1972" (%)</u>
111 General Agriculture	20	20	6.3
130 Arable - Grazing Stock	30	25	7.9
310 Grazing Stock - Arable	49	48	15.2
336 Cattle	58	61	19.3
340 Grazing Stock - Pigs and Poultry	27	23	7.3
430 Pigs and Poultry - Grazing Stock	13	16	5.1
112 Horticulture	12	15	4.7
223 Fruit	20	22	7.0
224 Vines	28	28	8.9
Others	52	58	18.3
Total	<u>309</u> ====	<u>316</u> ====	<u>100</u> =====

III. REPRESENTATION OF THE FIELD OF SURVEY BY THE ACCOUNTANCY SAMPLE

13. The samples for "1971" and "1972" represent almost 2 million farms, or about 60% of the total number of farms covered by the restricted field of survey of the data network. The farms represented may be divided as follows, according to country and type of farming:

Type of farming	<u>"1971"</u>						
	Germany	France	Italy	Belgium	Luxem- bourg	Nether- lands	EEC (Six)
111 General Agriculture	2038	35617	31255	-	-	7390	76300
130 Arable - Grazing Stock	19210	44414	69421	1766	-	-	134811
310 Grazing Stock- Arable	109146	140888	60149	8712	716	1774	321385
336 Cattle	63443	321284	97536	28175	1100	50100	561638
340 Grazing Stock- Pigs and Poultry	99923	30088	-	11041	-	9519	150571
430 Pigs and Poultry - Grazing Stock	38314	7645	-	5747	-	7303	59009
112 Horticulture	-	10294	67477	7370	-	17990	103131
223 Fruit	-	7011	135346	1892	-	919	145168
224 Vines	276	45695	136901	-	-	-	182872
Others	3649	33394	155418	1948	-	6828	201237
TOTAL	335999	676330	753503	66651	1816	101823	1936122

"1972"

Type of farming	Germany	France	Italy	Belgium	Luxem- bourg	Nether- lands	EEC (Six)
111 General Agriculture	1175	33830	32250	-	-	7390	74645
130 Arable - Grazing Stock	19210	40771	59639	1766	-	-	121386
310 Grazing Stock - Arable	91548	142256	61798	8712	716	1774	306804
336 Cattle	63619	322853	101701	28175	1100	50100	567548
340 Grazing Stock - Pigs and Poultry	88414	32369	-	6540	-	8245	135568
430 Pigs and Poultry - Grazing Stock	41564	7645	-	5747	-	7303	62259
112 Horticulture	-	24303	67477	7370	-	20064	119214
223 Fruit	-	10492	151168	1892	-	919	164471
224 Vines	276	47247	146910	-	-	-	194433
Others	6055	24712	184258	7710	-	6828	229563
TOTAL	311861	686478	805201	67912	1816	102623	1975891

14. Of the 2 million farms represented roughly 29% are cattle, 16% grazing stock - arable, 10% wine growing, 8% fruit, 7% grazing stock - pigs and poultry, 6% arable - grazing stock, etc.

Thus certain types of farming are better represented than others; however, in view of the fact that some types are more complex than others, a greater than average degree of representation may be appropriate.

#### IV. PRESENTATION OF RESULTS

15. The results for the accounting years "1971" and "1972" are given in the following forms:

- average results for each group of returning holdings;
- overall results covering all or part of the sample.

This two-part layout provides the supplementary information needed for the guidance and management of the Common Agricultural Policy.

The data network must satisfy the growing need for information about the situation in farming according to the type, size and location of the farms concerned. This need is now greater than ever as a result of the rapidity and scale of the changes taking place.

The breakdown of the results by group of holdings meets this requirement, making it possible to assess the situation of groups of the same type and compare not only the income obtained but also the factors employed so as to determine the causes of any disparities and the means of mitigating them.

16 The presentation of the results broken down by group of holdings does not suffice to answer all the questions that arise at Community level. It needs to be supplemented by more general figures on the basis of which the authorities responsible for the Common Agricultural Policy can establish guidelines and determine the principal measures to be taken. Consequently, in addition to the group-by-group breakdown, figures are given in a condensed form, both for the entire sample and for broad subdivisions thereof.

17. The presentation of the "1971" and "1972" results by group of holdings conforms to the framework and definitions adopted earlier (1), except for the fact that 35 new criteria have been added to the 86 previously employed. These latter relate to certain economic aggregates and to the details of inputs per hectare. Criterium number 2, which related specifically to mechanised farms, and which no longer served any purpose since virtually all the returning holdings are mechanised, was replaced by figures indicating the number of returning holdings new to a group since the previous year (2).

The two series of results, for "1971" and "1972", are fully comparable; they make possible an objective assessment of the change in the situation of farms during the period. To make this trend more obvious in certain cases graphs have been used not only to illustrate the overall trend but also the divergencies of trend between the different groups of holdings.

18. The consolidated results illustrate the positions of groups of holdings in certain structures (size groups), types of farming, etc. indicating general trends affecting these groups in the individual Member States and in the Community as a whole. Certain results, which have an obvious political significance, were extrapolated from the overall field of survey represented by using weighting indices based on the number of holdings included, as given in the tables in the Annex.

- 
- (1) cf. Report on the results of the FADN "1968" - "1969" - "1970" Doc. Sec. (72) 2800 final - Part B.
- (2) This criterion must be taken into consideration in year-to-year comparisons of the results for groups where the wastage was particularly high.
- (3) It will be recalled that the "1971" and "1972" results are not strictly comparable with the results for former years since full account has been taken of VAT in "1971" and "1972".

19. In this report, economic results are presented for the first time in a form corresponding to the various types of production. This format supplements the tables and was adopted in response to the wishes expressed by a number of readers of the previous report, who wanted to have the results available in a more condensed form. This presentation requires a certain initial effort of understanding the various parts of the diagram, once this effort has been made, however, it is exceptionally easy to use. The major groupings of products and their costs can be seen at a glance and their relative size can be readily judged. On the basis of this example, the form of presentation of the accountancy data can no doubt be still further improved.
  
20. There exist many other possible forms for the presentation of the results. However, it was thought desirable, for "1971" and "1972", to keep to the same form as for preceding years - apart from the instances mentioned above - and to reserve the other alternatives for use as necessary in presenting the results obtained in forthcoming years. It should be noted, however, that in setting out certain results, constant samples of returning holdings were used so that the trends of the principal factors of production and of incomes could be recorded over a period of several successive years without risking the distortion which can result from the substitution of individual holdings in successive samples.

This presentation of the "1971" and "1972" results marks the end of the experimental "running-in" period of the data network in the six original Member States. It thus forms a transition between the results for the first three accounting years and those for "1973" and "1974" which, of course, will relate to the enlarged data network covering all nine Member States. In turn this will precede the period "1975" - "1978" in which the network will be finally perfected.

V. PRINCIPAL RESULTS FOR "1971" - "1972"

21. In this chapter, by reason of their importance, the following criteria are examined: the Gross Farm Income per ALU, the Labour Income per ALU and the Costs per hectare. Relationships between these criteria and those of Gross Production and of Net Farm Income will also be studied. For the two years concerned this analysis will be based on the average results of those groups comprising at least 10 returning holdings.

A) Levels of income

22. The levels and trends in the Gross Farm Income per ALU and in the Labour Income per ALU are given in the table below, both for all holding groups and by sub-groups relating to the four main types of farming in five area categories.

Gross Farm Income and Labour  
Income per ALU

Holding Sub-Groups	UA			
	Gross Farm Income/ALU		Labour Income/ALU	
	"1971"	"1972"	"1971"	"1972"
All holding groups of at least 10 returning holdings	4,289	5,680	2,751	3,940
By farming type:				
• Arable	4,969	6,144	3,222	4,244
• Permanent crops	3,486	4,663	2,317	3,318
• Cattle and sheep	4,153	5,646	2,578	3,877
• Pigs and poultry	6,176	7,936	4,152	5,510
By utilised agricultural area:				
• < 5 ha	3,438	3,892	2,446	2,953
• 5 - 10 ha	3,087	4,354	2,063	3,204
• 10 - 20 ha	3,911	5,279	2,534	3,661
• 20 - 50 ha	5,215	6,821	3,086	4,540
• ≥ 50 ha	7,023	9,341	4,312	6,369

The data in the above table together with the itemised figures from Annex VII reveal the following facts.

23. The level of Gross Farm Income per ALU has broadly increased from 4,289 UA to 5,680 UA between "1971" and "1972". Labour productivity in monetary terms has thus improved by about 32% in the period of two years.
24. The level of Labour Income has increased from 2,751 UA/ALU in "1971" to 3,940 UA/ALU in "1972" (43%).
25. The average income levels recorded result from a wide distribution which is shown in the following diagram and in Annex VII B. The dispersion of incomes was wider in "1971" than in "1972". It can be seen that there is a gradual shift from one year to the next in the histogram of distribution of Labour Income towards the higher income zones.

Distribution of categories of Labour Income per ALU  
in "10,000" returning holdings from FADN

26. In descending order of incomes it will be seen that:
- a) The class of holding devoted to "Pigs and Poultry" production clearly leads all other groups for the level of income in the two years concerned. Within this class there are categories of holdings which did particularly well as regards Labour Income, e.g. farms devoted to "Pigs, Poultry and Grazing Livestock", which had reached an average Labour Income of 3,994 UA/ALU in "1971" and 5,264 UA/ALU in "1972".
  - b). Next come the "Arable" groups of which "General Agriculture" reached an average Labour Income of 5,523 UA/ALU in "1971" and 7,274 UA/ALU in "1972".
  - c) In third place come the "Grazing Stock" ("Cattle" and "Sheep" groups with an average Labour Income of 2,578 UA/ALU in "1971" and 3,877 UA/ALU in "1972".
  - d) The "Permanent Crops" group was in last place with an average Labour Income of 2,317 UA/ALU in "1971" and 3,318 UA/ALU in "1972".
27. The trends in Labour Income per ALU based on average results from the groups of holdings is given in the following graphs for each of four general farm types (sole or main enterprises).

Each point in the scatter on each graph represents a group of farms. The dotted line is the bisector representing the geometrical position of "status quo" points. Points representing groups of holdings whose incomes have remained the same from one year to another are thus located on this line. The solid line is the regression line for all groups. The equation and the correlation coefficient are also shown.

In particular, these graphs show that:

- a) For the groups of farms belonging to the "General Agriculture" type, the improvement in the Labour Income per ALU was most marked in the case of farms which already had a high income.
- b) The Labour Income per ALU on farms of the "Permanent Crops" type also showed an increase, whatever the initial level of income.
- c) As regards farms of the "Grazing Stock" type, an upward trend was also recorded, the growth of income being slightly greater on farms already enjoying a high level of income.
- d) In the case of farms of the "Pigs and Poultry" type, Labour Income per ALU in "1972" was also higher than in "1971". The higher the income of a farm in "1971", the greater the increase recorded in "1972".

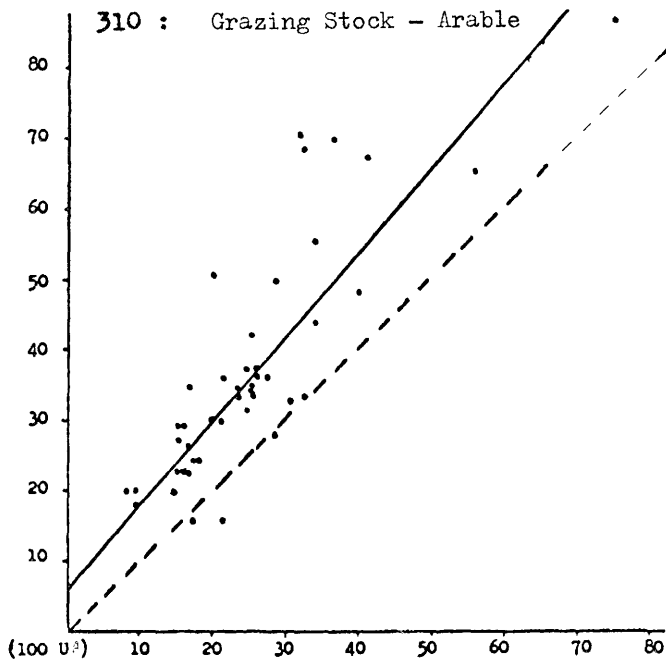

COMPARISON OF LABOUR INCOMES

PER ALU "1971" - "1972"

---- status quo

$$y = 1.28 X - 87$$

$$r = 0.948$$

---- status quo

$$y = 1.19 X + 647$$

$$r = 0.836$$

---- status quo

$$y = 1.45 X + 222$$

$$r = 0.946$$

340 : Grazing Stock - Pigs & Poultry

----- status quo

----- status quo  
 $y = 1.06 X + 965$   
 $r = 0.736$

- e) The trends in labour income per ALU recorded for farm types I, III and IV are confirmed when a comparison is made with those for each of the mixed types of farm: "Grazing Stock - Arable", "Cattle", "Grazing Stock - Pigs and Poultry".

The growth in the Labour Income per ALU does not depend on the initial level of income for the Cattle type of farm. On the other hand, the influence of the initial level of income is felt where cattle production is combined with the farming of arable land and even more so where such production is combined with that of pigs and poultry.

Thus, the higher the initial level of income, the greater was the increase in the Labour Income per ALU, in the case of the two types of farms considered to be technologically advanced, that is, "General Agriculture" and "Pigs and Poultry".

28. In the "1972" accounting year it can be seen that the sharp rise in farm income applied to most types of farming. Labour Income increased by between 19% and 52% compared with the previous year which had already shown a significant rise in income. Farms producing grazing stock, benefited by an increase generally exceeding 40%. The growth in Labour Income was less for horticultural holdings (19%) and fairly modest for fruit farms (29%) (cf. Annex VIIC).

29. The data in the table on page 20 also tend to show the favourable effect of a larger area on income levels for medium and large sized holdings. Reference also to tables in Annex VIIB1 to B2 would alone lead one to suppose that area is an important factor in the level of Labour Income.
30. However, this conclusion must be modified in the light of a special analysis of the "1971" and "1972" sample (see Annex VIIC). While Labour Income per ALU would appear to be closely related to area in the case of "General Agriculture", "Permanent Crops with Arable", "Grazing Stock with Arable", "Grazing Stock with Permanent Crops" and "Cattle", for most other types of farming this factor has little significance. There are even cases where the size of UAA may be regarded as entirely irrelevant, e.g. "Arable with Permanent Crops", "Pigs and Poultry with Grazing Stock" and "Vines".
31. The Community averages for Labour Income per ALU recorded in "1971" and "1972" for the different types of farming include a considerable variation from one holding group to another (cf. Annex VIIE and graphs pp.24 & 25). The "1971" and "1972" results for 4 categories of holding illustrate the point. Within these categories, the range of regional variation in Labour Income per ALU either side of the mean (= 100) was as follows:
- a) "Grazing Stock - Arable" from 10 to 20 ha:
- "1971" - lowest value 41, highest value 201;  
"1972" - lowest value 58, highest value 177.

b) "Grazing Stock - Arable" from 20 - 50 ha:

"1971" - lowest value 46, highest value 224;

"1972" - lowest value 65, highest value 212.

c) "Cattle" from 10 to 20 ha:

"1971" - lowest value 49, highest value 227;

"1972" - lowest value 33, highest value 178.

d) "Cattle" from 20 - 50 ha:

"1971" - lowest value 61, highest value 240;

"1972" - lowest value 45, highest value 187.

32. Of the 309 holding groups represented by 10 or more returning holdings in "1971", 162 (i.e. 52%) had a Labour Income of less than 2,500 UA/ALU. This percentage fell to 25% in "1972".

Holding groups with a Labour Income of between 2,500 and 5,000 UA/ALU rose from 39% (119 groups) in "1971" to 50% (160 groups) in "1972".

Holding groups with a relatively high Labour Income (over 5,000 UA/ALU) increased from 9% (28 groups) in "1971" to 25% (78 groups) in "1972".

33. A breakdown of holding groups by country and by total Labour Income per ALU gives the following broad picture for the two years:

- The German and the French holdings are divided approximately equally between the "less than 2,500 UA/ALU" and the "2,500 - 5,000 UA/ALU" income brackets in "1971";

However, in "1972" 79% of the German groups were in the "2,500 - 5,000 UA/ALU" category and in the French groups respectively 51% and 38% more in the "2,500 - 5,000 UA/ALU" and the "more than 5,000 UA/ALU" categories.

- The Italian groups of holdings fall mainly into the category "less than 2,500 UA/ALU" (74%) in "1971" and in "1972" are divided about equally between the categories "less than 2,500 UA/ALU" and "2,500 - 5,000 UA/ALU".
- For the Benelux countries in "1971" the holdings groups were fairly evenly divided between categories "2,500 - 5,000 UA/ALU" and "over 5,000 UA/ALU". In "1972" the majority fell into the category "over 5,000 UA/ALU" (78%).

34. A detailed analysis of the changes as between "1971" and "1972", based solely upon the results of those holding groups which appeared in the sample in both years, shows that the level of Labour Income per ALU has increased most in the farms engaged in "Permanent Crops" ( 47%), followed by "Cattle and Sheep" farms ( 44%), "Pigs and Poultry" ( 40%) and finally by "Arable" farms ( 27%).

#### B) Costs

35. The bar chart in Annex VII H shows the changes in Costs, Gross Production and Net Farm Income between "1971" and "1972". Labour and Capital Costs have not been included in this comparison.

36. Only those farm types which include at least 50,000 holdings at Community level have been considered.
37. The costs include specific charges of cultivations, specific charges of livestock, costs of mechanisation and contract work as well as general costs. They are expressed per hectare, by Member State and for the Community (of Six) as a whole.
38. The data appearing in the bar charts gives the average weighting of groups appearing in the Network sample for the Community of Six and for each country and farm type. The results have been weighted on the basis of the Structure Survey of 1966/67 with the exception of data for Italy, weighting the figures of other countries on the basis of the number of holdings from the 1970 census would have biased the results. The table attached to the bar charts shows the number of returning holdings in the sample and the number of holdings represented by the sample.
39. To judge better the cost changes of Gross Production and Net Farm Income between "1971" and "1972" the diagrams show the number of holdings groups represented in "1971" by at least 10 returning holdings, the number of holdings groups represented in "1971" and "1972" as well as the number of holdings groups represented in "1972".
40. The diagrams in Annex VII H prompt the following conclusions:
  - a) For all the types of holdings analysed, farm costs have increased on average by 8.0% Gross Production by 21.5% and the Net Farm Income, as a result, has risen strongly (33.9%).

By type of farming the "1971" - "1972" trends are as follows:

<u>Type of farming</u>	<u>Index "1972" ("1971" = 100)</u>		
	<u>Gross Production</u>	<u>Farm Costs</u>	<u>Net Farm Income</u>
General Agriculture	114.9	111,8	117,5
Horticulture	99.6	93.2	103.8
Arable - Grazing Stock	113.6	103.2	123.0
Permanent Crops - Arable	131.0	118.8	136.7
Fruit	115.1	105.3	118.6
Vines	122.6	108.6	127.4
Olives	136.3	89.2	155.0
Cattle	129.3	111.4	145.2
Grazing Stock - Pigs and Poultry	115.3	106.3	129.0
Grazing Stock - Arable	119.5	105.3	135.0
Pigs and Poultry - Grazing Stock	111.1	103.4	124.5
Weighted average of farming types	121.5	108.0	133.9
Range of Index	100 - 136	89 - 119	104 - 155

- b) For the same type of holding the Costs and the Gross Production are different in absolute values between countries. The cost structure varies according to the farming system.

- c) The relationship between Gross Production and Costs is as follows for different types of holding:

<u>Type of holding</u>	<u>"1971"</u>	<u>"1972"</u>
Pigs, Poultry - Grazing Stock (430)	1.56	1.68
Grazing Stock - Pigs, Poultry (340)	1.66	1.80
Grazing Stock - Arable (310)	1.91	2.17
Arable - Grazing Stock (130)	2.11	2.32
Cattle (336)	2.12	2.46
General Agriculture (111)	2.21	2.27
Horticulture (112)	2.56	2.73
Olives (225)	3.52	5.39
Permanent Crops - Arable (210)	3.13	3.45
Fruit (223)	3.80	4.15
Vines (224)	3.90	4.40

The output/input ratio has increased between "1971" and "1972" and this has favourably influenced incomes on these holding types. A high ratio such as that of "Vines" is a feature of a farming system with relatively low costs. A low ratio, e.g. "Pigs, Poultry and Grazing Stock" indicates a system with relatively high costs.

Incomes of farming systems with enterprises of high output/input ratios will be less influenced by cost increases than those with low output/input proportions.

The figures show that between "1971" and "1972" the output/input/ relationship improved in all the farming systems.

In general those holdings with intensive livestock enterprises are much more influenced by increases in factor costs than those based on permanent crops.

- d) In "1971" Costs applicable to the holding lay between 26% (224 : "Vines") and 64% (430 : "Pigs and Poultry and Grazing Stock") of the Gross Production (see bar charts Annex VII H). In "1972" these percentages had slightly fallen, being situated between 19% (225 : "Olives") and 60% (430 : "Pigs and Poultry and Grazing Stock").

VI. TRENDS IN RETURNING FARM INCOMES BETWEEN "1969" AND "1972"

41. In order to analyse trends in farm incomes from "1969" to "1972" according to the type of farm whilst avoiding distortions which might result from the natural erosion of the FADN sample income trend analyses were carried out on the basis of constant samples. (1)

The following table includes the results of the constant samples of some 5,000 holdings. It shows that the growth in incomes (Gross Farm Income) expressed on the basis of annual indices varies greatly according to the type of farm. It varies from an index of 132 for farms specializing in "General Agriculture" to an index of 175 for farms specializing in "Cattle".

- 
- (1) As long as the FADN does not represent all the Community countries the use of constant samples of returning holdings is necessary in order to assess as accurately as possible the trend of agricultural incomes in the various types of farm represented. The trend of incomes thus ascertained takes into account all elements which influence income and the evolution of farm structures; the other approach, which consists in not using constant samples tends to ignore structural changes, the effects of which on income are to some extent offset by the annual reclassification of returning holdings.

Growth index of Gross Farm Income between "1969"  
and "1972" broken down according to main type of  
farming on the basis of constant samples from  
about 5,000 returning holdings

Type of farm	Index ( 1969 = 100)		
	"1970"	"1971"	"1972"
General Agriculture	99	120	132
Arable - Grazing Stock	100	121	154
Grazing Stock - Arable	106	129	174
Cattle	107	124	175
Grazing Stock - Pigs and Poultry	86	114	141
Pigs and Poultry - Grazing Stock	82	111	140
Horticulture	106	123	153
Fruit	102	118	147
Vines	131	123	167

Farms specializing in cattle breeding together with those specializing in vines are, therefore, those with the highest "apparent" growth in income over the whole of the period in question, but especially, as shown in the following table during the last year "1972".

TREND OF PRODUCTION FACTORS IN THE PRODUCTION AND INCOME OF RETURNING HOLDINGS

from "1969" to "1972" on the basis of three constant samples from 5000 returning holdings over two consecutive farm years "1969"=100

42. This increase, however, warrants analysis in greater detail, not only in the form of indices but also in absolute value. In the first place, it seems that there were large (percentage) increases in groups of farms whose incomes were very low at the beginning of the period in question ("1969").

General Agriculture	4,400 UA/ALU
Arable - Grazing Stock	2,132 UA/ALU
Grazing Stock - Arable	1,550 UA/ALU
Cattle	2,212 UA/ALU
Grazing Stock - Pigs and Poultry	2,580 UA/ALU
Pigs and Poultry - Grazing Stock	3,019 UA/ALU
Horticulture	2,905 UA/ALU
Fruit	2,238 UA/ALU
Vines	2,550 UA/ALU

Labour Incomes were lowest for farms specializing exclusively or mainly in grazing stock and in fruit growing and vines. These were precisely the farms which had the highest rate of income growth. Despite considerable increases in income, however, these types of farm were not always able to make good, or even narrow the gap which separated them from those which were already in a comfortable economic position in "1969".

43. Labour Income rose in the same proportion as Gross Farm Income. In fact, it increased more rapidly, considering that the cost of the two factors other than labour (land and capital) did not rise at the same rate as inputs and that, moreover, there was a certain decrease in manpower.

44. It is seen, for example, that farms specializing in "Cattle" which have an index of 175, experienced a very slightly higher increase in income in absolute value than did farms specializing in "General Agriculture". The latter are, on the whole, always far ahead of farms specializing in "Cattle".
  
45. Farms concentrating on beef and dairy cattle make up more than a fifth of the holdings in the field of survey. They also account for more than a fifth of the ALU's. For this reason they are particularly important from the standpoint of the Common Agricultural Policy, the more so since it is in the context of those farms that arbitration is effected between meat production and milk production, two fields which are of special concern to those responsible for the Common Agricultural Policy.

A specific analysis of this type of holding was carried out in order to determine the specific behaviour of farms engaged in beef or milk production or in both activities together. This analysis, however, is not based on a constant sample but on all returning holdings engaged in cattle production and appearing in the samples of four accounting years.

The table in Annex VIII C provides a summary of the Labour Income per ALU in the three sub-types of returning holdings: "Milk", "Milk and Beef", "Beef" for the four accounting years concerned.

In "1972" a significant reversal in income occurred in the "Beef" holdings vis a vis those for "Milk". This reversal arose mainly from the rise in the price of beef and veal during the "1972" accounting year, this price rise occurring at the moment of the closing valuation.

From the increase in capital invested in these holdings it appears that no insignificant part of the recorded rise in income has been sunk in the form of "live stock" and especially on "Beef" farms.

Doubtless, the holdings concerned have not felt this increase in their income in the same way as if it had been obtained by cash returns.

Another characteristic feature of the "1972" situation lies in the fact that the Labour Income per ALU in the mixed farms "Milk and Beef" have not followed the same trend from which "Beef" holdings have benefited. Notwithstanding their advancement they fall short of the incomes seen for those farms specifically devoted to either "Milk" or "Beef".

In that year specialization has been less rewarding than a mixed type of production. Nevertheless, whatever the dominant farming system, the Labour Income per ALU has been higher for the "Cattle" type of holding and more significant than the size of the holding.

The deviation between the income of holdings of the smallest size (5 - 10 ha) and the income of the largest size holdings (>50 ha) varied in "1972" from one to three times, though four years before the deviation was merely between one and two times. This deviation has gradually increased in the intervening years. The economies of scale are thus accentuated in the "Cattle" farms at the end of the four year period.

In "1972" it will also be noted that the holdings of smallest size (5 - 10 ha) engaged in "Beef" production and which in previous years represented an exception as to economy of scale no longer benefited from an income advantage over those holdings in the category immediately above (10 - 20 ha).

\*

\*                   \*

Summing up, the accounting year "1972" can be considered a very good year as far as farm incomes were concerned. A distinct improvement over previous years had already been noted for "1971". All farming systems were much encouraged by these very favourable circumstances. In general those farm types with the lowest income levels have recorded the biggest improvements. This has brought about a narrowing of the dispersion of farm incomes as between the various systems.

The two accounting years have been marked by an exceptionally rapid growth in farm incomes on farms engaged in beef production and in vines. This spectacular increase in incomes in these two farming systems have arisen, inter alia, from a substantial increase in the price of the products. This situation has created a climate conducive to increasing production of these commodities, while, conversely, external circumstances were bringing about a reduction in consumption at the same time as an increase in production costs. All the ingredients of a serious crisis in the two types of farming were thus being brought together.

PART 1

FEATURES OF FADN IN "1971" AND "1972"

THE EEC FARM ACCOUNTANCY DATA NETWORK -

ORGANIZATION

This Annex contains:

A - A brief description of the organization of the Network.

B - A diagram of the operation of the Network.

C - A map showing the Territorial Divisions of the Network.

D - A map showing distribution of FADN "1971".

THE EEC FARM ACCOUNTANCY DATA NETWORK - ORGANIZATION

To meet the needs of the Common Agricultural Policy the Council of Ministers of the European Economic Community, acting on a proposal from the Commission, set up by Regulation (Reg. No. 79/65/EEC of 15th June, 1965) a network for the collection of farm accountancy data. This network, in fact, has been functioning in the field since 1968.

The main purpose of the network is to provide the necessary accountancy data for an annual determination of incomes and business analysis of agricultural holdings. The results provided by the network are primarily used by the Commission to prepare an annual report on the situation of agriculture and of agricultural markets in the Community.

The field of survey is confined to holdings which market at least half of their final production and are run by persons who devote at least three-quarters of their annual working time to the business. During the network's first years of operation the field of survey was further limited so as to cover only holdings of five or more hectares, though this limitation as to area did not apply to businesses producing wine, fruit, horticultural produce or olive products, for which no limit as to area has been set.

During its initial years of operation the network has relied for its returns on a sample of 10,000 holdings, selected from within the various regions of the Community of Regional Committees consisting of representatives of those concerned (administrative authorities, farms, accountancy offices, etc.). All holdings taking part in the survey do so voluntarily. With the help of the accountancy offices each holding keeps full farm accounts. The main task of the accountancy offices is to prepare, from these accounts, farm returns. The annual data in these returns are forwarded to the Commission by the various national liaison agencies.

The data are processed at Community level by the Commission, assisted by a Management Committee (the Community Committee for the Accountancy Data Network) consisting of representatives of the Member States and of the Commission. The Commission provides the Chairman and also acts as the Committee's secretariat. The Committee is consulted mainly for the purpose of verifying that the selection of returning holdings has been carried out correctly and of analysing and evaluating the data recorded.

\*

\* \*

As from 1973 the Data Network includes 13,600 returning holdings and covers the entire territory of the enlarged Community. The "1972" results are, therefore, the last to relate to the original Community of Six.

At the end of 1973, the Council of Ministers decided to double the number of returning holdings in the four years 1975 - 1978, gradually raising it to 28,000. This extension will considerably enlarge the scope of this source of information.

MAP SHOWING THE DISTRIBUTION OF RETURNING HOLDINGS  
Selected for the "1971" accounting year

FIELD OF SURVEY OF THE  
FARM ACCOUNTANCY DATA NETWORK

The Annex contains a breakdown of holdings classified by category of holding and by territorial division in 1970 . In the absence of a special statistical analysis corresponding to the Community classification of farm holdings, the breakdown has in most cases been estimated by the authorities of Member States on the basis of available statistical data. The data from the 1970 Census of Agriculture have mainly been used for this purpose, except in Italy, where no adequate data for the purpose are available more recent than those contained in the 1966/67 Community Farm Structure Survey.

It should be recalled that the field of survey of the FADN includes market-oriented holdings, where marketing is the main activity of the man in charge. Anticipating the application in "1975" of the recent Council decision limiting the field of survey according to the labour employed, we have already set a manpower threshold expressed in ALUs (annual labour unit) per holding. The ALU threshold by holding has been adopted in Germany, France, Belgium, Luxembourg and the United Kingdom. In the other Member Countries 0.75 ALU by holding was adopted. The 1966 data for Italy also gave a threshold of 0.75 ALU.

THE "1971" AND "1972" SAMPLE

The Annex contains for each of the two accounting years considered the following:

- A. Breakdown of returning holdings by division.
- B. Breakdown of holdings forming part of groups of at least ten returning holdings by type of holding.
- C. Coverage of the field of survey by groups of ten or more returning holdings.
- D. Breakdown of groups of ten or more returning holdings by type of holding and division for each of the accounting years "1971" and "1972".

The accounting sample comprises all the holdings which were selected by regional committees and approved by the Commission Services after consultation with the Community Committee and for which the Commission received a correctly completed return. In "1971" and "1972" this sample contained 10,134 and 10,287 accounting returns respectively. Although the presentation of overall results generally includes all the holdings in the sample, sub-groups of the sample are used in presenting and analysing specific aspects. The presentation of accounting results by groups of holdings (all holdings of a given category in a given division) is mainly based on those returning holdings that belong to groups of ten or more holdings. In "1971" and "1972" the number of returning holdings belonging to such groups was no more than 8,501 and 8,752 respectively.

## BREAKDOWN OF RETURNING HOLDINGS BY DIVISION

TERMINOLOGY, DEFINITIONS, TYPOLOGY OF HOLDINGS

The Annex contains:

- A. Information on the accounting year, the starting and finishing dates of which differ from one Member State to another, on the rates of exchange of national currencies into units of account and a series of standard definitions used in preparing the accounting results as shown in Annexes V and VI, particularly the definition of "Annual Labour Units" (ALU), the method of calculating capital and return on capital, the determination of certain costs,...
- B. A diagram showing the main criteria of farm production and farm income, particularly gross production, gross output, gross and net farm income and labour income. This diagram reproduces the main headings on the farm accounting return.
- C. A diagram showing the three criteria for classifying holdings, used both in selecting returning holdings and in presenting the results, namely:  
  
type of farming;  
  
size (area);  
  
geographical location (division).

**A**  
**STANDARD DEFINITIONS ADDITIONAL TO THOSE SET OUT IN**  
**THE REGULATIONS RELATING TO THE FARM ACCOUNTANCY DATA NETWORK (1)**

Most of the definitions used in the Tables which follow can be found in the Council and Commission regulations dealing with the Data Network (1). This section gives a number of additional definitions :

Indication of accounting year : the accounting year is indicated in the top right-hand corner of each page by reference to the calendar year corresponding to the harvest in question, taking "1972" as an example, the actual accounting years used in each case are as follows :

- a) For horticultural and fruit-growing holdings (all countries) :  
 1.1.1972 - 31.12.1972
- b) For other holdings :  
 1.1.1972 - 31.12.1972 for France and Italy  
 1.5.1972 - 30. 4.1973 for Belgium, Luxembourg and the Netherlands  
 1.7.1972 - 30. 6.1973 for Germany

Unit of Account (UA) : the exchange rates used for converting national currencies were as follows :

Currency of Member State	Accounting year	
	"1971"	"1972"
DM	3,57502	3,469
FF	5,55419	5,554
Lit.	625,190	631,000
Fl.	3,58494	3,520
Fb/Flbg	49,51569	48,657

Item 6 : an Annual Labour Unit (ALU) represents one person working on the holding for at least 280 days or 2,380 hours. No person may constitute more than one ALU. ALU has been calculated as follows : each person working on the holding for 280 days (or 2380 hours) or more counts as one Unit; in the case of persons working for lesser periods, the total working period has been converted into ALU by dividing by 280, if given in days, or by 2380 if given in hours.

(1) Council Reg. No 79/65/EEC, Commission Regs. Nos 91/66/EEC, 118/66/EEC and 184/66/EEC (of. "The Farm Accountancy Data Network for the EEC", published by the Publications Office of the European Communities, No 8396).

Items 9 - 15 : figures for Capital represent the average of the opening and closing valuations.  
Item 15 : Net Worth as % of Total Capital. This figure is obtained by expressing Total Borrowings as a percentage of Total Capital (Land and Buildings + Farm Capital) and subtracting the result from 100.

Items 60 - 64 : Costs represent goods and services purchased plus produce consumed on the farm. "Goods and services purchased" comprises entries H 5/4 to H 22/4 on the EEC Farm Return.

Costs are subdivided into Crop Costs (H 13/4 to H 17/4 + H 13/5), Livestock Costs (H 9/4 to H 12/4 + H 9/5 to H 11/5), Machinery Costs (H 6/4 to H 8/4), Contract Operations and Machinery Hire (H 5/4) and General Costs (H 18/4 to H 22/4).

Item 68 : Supplies and Services comprise entries H 5/4 and H 7/4 to 22/4 on the EEC Farm Return.

Item 73 : Wages, Salaries and Social Security Charges Paid are in respect of hired labour only and comprise entries H 1/4 + H 3/4 - D 2/9 - D 1/9 (excluding Operators' salary where he is not a member of Holder's family).

Item 74 : Land and Building Expenses and Interest Paid comprise entries H 23/4 to H 27/4 on the EEC Farm Return.

Item 77 : Return on Land and Buildings and on Farm Capital comprises entries H 26/4, C 1/1 + H 30/3 and 5 % of I 4/2 to I 9/2 + I 4/4 to 9/4.

Items 87 - 121 : Details of Gross Production and Farm Costs per ha UAA.

Production and Incomes Measures : See diagram on following page.

Classification of Holdings : See scheme of classification and instructions in Annex II of Reg. No. 91/66/EEC. Simplified description of the various type of farming categories are given on page IV - C of this Report, while the Divisions are listed in Annex III of Regulation No. 91/66/EEC.

Explanation of symbols used in the tables :

- Nil
- \* Not available or negligible
- \* Item calculated using both survey and non-survey data

B

DIAGRAMMATIC PRESENTATION OF MAIN FARM PRODUCTION AND FARM INCOME MEASURES  
(Letters and figures in brackets refer to entries on the EEC Farm Return)

Item 65 : GROSS PRODUCTION (E 100/8 to E 100/13 + E 100/15 + E 100/16 - E 100/5 + G 22/6 to G 22/11 + G 22/13 - G 22/2 - G 22/3)		Farm Use (H 9/5 to H 11/5 + H 13/5)	
Item 67 : GROSS OUTPUT			
Item 69 : GROSS FARM INCOME	Chargeable Taxes (H 21/4)	Feed, Seed and Plants Purchased (H 9/4 to H 11/4 + H 13/4)	Other Supplies and Services Purchased (*)
Item 71 : NET FARM INCOME	Depreciation of machinery and equipment (H 5/4)	Goods and Services Purchased (H 5/4 to H 22/4)	
Item 71 : INCOME OF HOLDER AND FAMILY	Wages, Salaries and Social Security charges Paid(**) (H 27/4)	Interest Paid (H 26/4)	Rent Paid (H 26/4)
Item 78 : LABOUR INCOME	Rental Value (C 1/1 x H 30/3); Notional Interest on Farm Capital(***)		
Item 80 : FAMILY LABOUR INCOME	Wages, Salaries and Social Security Charges Paid (**)		

(\*) H 5/4+ H 7/4+H 8/4+H 12/4+H 14/4 to H 20/4 + H 22/4  
 (\*\*) H 1/4+H 3/4 - D2/9 - D1/9 (excluding Operator's salary where not a member of Holder's family)  
 (\*\*\*) 5% of  $\frac{I 4/2 + I 9/2 + I 4/4}{2}$  to I 9/4

C

CONSTITUTION OF HOLDING GROUPS

The annual results for the EEC Farm Accountancy Data Network are presented with the returning holdings grouped by type of farming, surface area and locality, in accordance with the schemes of classification set out below. The returning holdings have been classified on the basis of the data provided in the farm returns. Thus a "group of returning holdings" consists of holdings which, according to the data returned by them, fall within the same Type - of - Farming and Area category and are situated in the same Division.

The annual results are confined to data from groups comprising ten or more returning holdings.

A. BY TYPE OF FARMING

Main type	Specific type	Characteristics of category (1)	Code	Simplified description
I. Arable (excluding forage crops)	concentrating on general agriculture (A) horticulture (vegetables and flowers) (B)	$I > 2/3$ { $A > 1/2$ } { $B > 1/2$ } (neither A, nor B $> 1/2$ )	111	General Agriculture } Horticulture } Arable Gen.Agric. with Horticulture)
	combined with permanent crops stock farming dependent on the land stock farming independent of the land		$1/3 < I \leq 2/3$ { $III < II < I$ ; $IV < II$ } { $II < III < I$ ; $IV < III$ } { $II < IV < I$ ; $III < IV$ }	
II. Permanent crop production	concentrating on fruit (C) vines (D) olives (E)	$II > 2/3$ { $C > 1/2$ } { $D > 1/2$ } { $E > 1/2$ } (neither C, nor D, nor E $> 1/2$ )	223	Fruit } Vines } Permanent Olive Products } Crops Misc. Permanent Crops }
	combined with arable cropping stock farming dependent on the land stock farming independent of the land		$1/3 < II \leq 2/3$ { $III < I < II$ ; $IV < I$ } { $I < III < II$ ; $IV < III$ } { $I < IV < II$ ; $III < IV$ }	
III. Forage crop prod. and stock farming dependent on the land (horses, cattle, sheep, goats)	concentrating on cattle (F) sheep and goats (G)	$III > 2/3$ { $F > 1/2$ } { $G > 1/2$ } (neither F, nor G $> 1/2$ )	336	Cattle } Sheep and Goats } Grazing Cattle with Sheep and Goats } Stock
	combined with arable cropping permanent crops stock farming independent of the land		$1/3 < III \leq 2/3$ { $II < I < III < IV < I$ } { $I < II < III < IV < II$ } { $I < IV < III < II < IV$ }	
IV. Stock farming independent of the land (pigs;poultry (including other small livestock))	concentrating on pigs (H) poultry (K)	$IV > 2/3$ { $H > 1/2$ } { $K > 1/2$ } (neither H, nor K $> 1/2$ )	448	Pigs } Poultry } Pigs and Pigs with Poultry } Poultry
	combined with arable cropping permanent crops stock farming dependent on the land		$1/3 < IV \leq 2/3$ { $II < I < IV$ ; $III < I$ } { $I < II < IV$ ; $III < II$ } { $I < III < IV$ ; $II < III$ }	
V. No predominant type		neither I, nor II, nor III, nor IV $> 1/3$	550	Other

(1) Roman numerals indicate main type of farming, fractions refer to proportion of gross production (total value of products listed in Annex I, excluding forage crops (Code 53)) consumed on the farm. The symbol " $<$ " means "less than"; " $\leq$ " means "less than or equal to"; " $>$ " means "greater than".

B. BY AREA (Utilized Agricultural Area)

Code	U.A.A.	Code	U.A.A.	Code	U.A.A.	Code	U.A.A.	Code	U.A.A.
1	< 5 ha	2	5 - 10 ha	3	10 - 20 ha	4	20 - 50 ha	5	≥ 50 ha

C. BY DIVISION

No	Name of Division	No	Name of Division	No	Name of Division
01	Schleswig-Holstein	13	Basse-Normandie, Haute-Normandie	25	Liguria
02	Niedersachsen	14	Bretagne, pays de la Loire, Poitou-Charente	26	Emilia-Romagna
03	Nordrhein-Westfalen	15	Centre, Région parisienne	27	Toscana
04	Hessen	16	Franche-Comté, Champagne, Bourgogne	28	Umbria, Marche
05	Rheinland-Pfalz	17	Lorraine, Alsace	29	Lazio, Abruzzi
06	Baden-Württemberg	18	Limousin, Auvergne	30	Campania, Calabria, Molise
07	Bayern	19	Rhône-Alpes	31	Puglia, Basilicata
08	Saarland	20	Aquitaine, Midi-Pyrénées	32	Sicilia
09	Hamburg (*)	21	Languedoc, Provence-Côte d'Azur-Corse	33	Sardegna
10	Bremen (*)	22	Piemonte, Valle d'Aosta	34	Belgique / België
11	Berlin (*)	23	Lombardia	35	Luxembourg
12	Nord, Picardie	24	Veneto, Trentino-Alto Adige, Friuli-Venezia Giulia	36	Nederland

(\*) There were no returning holdings during the accounting year concerned for Divisions Nos 09 (Hamburg), 10 (Bremen) and 11 (Berlin).

## PART II

PRINCIPAL AVERAGES FOR "1971" AND "1972"BY GROUPS OF RETURNING HOLDINGS

The tables in Part II mainly contain the averages of groups of ten or more returning holdings. Each group of farms consists of all the returning holdings of a given type and size in a given region. Eighty-six criteria of structure, production and income have been used in presenting the results from "1968" to "1970". However, for the "1971" and "1972" accounting years a series of criteria relating to gross production and costs per hectare have been included (criteria 87 to 121).

\*

\* \*

For the first three years of operation of the Data Network a reduced field of survey was adopted, but even this reduced field could not be fully covered by a sample of 10,000 returning holdings. Consequently, the data obtained from the Network give a necessarily incomplete picture of economic conditions on Community farms as a whole (1).

---

(1) Original Community (six Member States).

Since every holding selected to make a return must be one farmed by a person willing and able to keep accounts, the holdings in the sample may be regarded as enjoying an above average level of management. This is particularly true of Luxembourg, where in addition the holdings concerned receive special attention from the local farm extension services.

The first years of operation of the Data Network should moreover be looked upon as a running-in period for a medium of information that some Member States were using for the first time. Despite the considerable progress achieved since "1968" the returns for "1971" and "1972" have not yet, in all cases, reached the desired level. These results moreover contain a number of omissions due to the fact that in some Member States certain of the optional items in the farm return, particularly those concerning borrowings and the interest charges relating thereto, were not completed.

Contrary to the presentation of results of the previous accounting years, those for "1971" and "1972" (criteria which have been derived from criteria 65 and/or 68) take VAT into account (1), in other words

---

(1) The figures for Italy are exclusive of VAT since it was not applied there until 1st January, 1973.

VAT received on products has been taken into account in determining the amount of production (criterion 65) and the VAT paid on costs and investments to determine the amount of supplies and services (criterion 68) (1). The other criteria (1 to 64 and 87 to 121) that correspond to values have as in previous accounting years been given exclusive of VAT (2).

Certain criteria of income, in particular labour income depend on certain assumptions regarding the return on land and buildings and on farm capital (rental value of land and buildings in owner occupation; standard interest rate of 5% on farm capital). Thus the income levels in question are directly dependent on the assumptions made. However, the results are presented in such a way that other assumptions may be applied.

The results as presented in this report are not necessarily identical with those which the individual Member States might produce, mainly because of differences in the samples, in the definitions of criteria, in the classification of holdings and in the methods of calculating averages.

- 
- (1) With regard to the Federal Republic of Germany, VAT on products also includes partial compensation for the effect of the revaluation of the DM in the form of 3% of sales excluding VAT. With regard to France, the flat rate refund paid to a farmer who had opted for this by definition only represents partial compensation for VAT paid on current purchases and for redemption of VAT paid on the purchase of fixed assets. In the case of these farmers, the amount of the refund is included in the gross production (criterion 65) and the VAT on purchases in supplies and services (criterion 68).
  - (2) With regard to the Netherlands, these criteria have been determined by a flat rate deduction of VAT on products and costs.

PART III
----------

The third part of these Annexes contains tables which give a general view of the situation and changes in the returning holdings both as to structure and to types of farming.

The first group of tables relates to the basic "1971" and "1972" results. These tables show how the returning holdings are divided between main farming types as well as according to particular aspects especially the income category. They also show how labour income for a given type of holding varies according to region and how the labour income has changed with the type of farming.

The second set of tables relates to the changes in returning holdings during the accounting years "1969" to "1972" based on constant samples drawn from two successive years. These tables show how the production factors (structure) and the results (income) have evolved for the different types of farming in the last four accounting years.

Attention has been focused particularly on holdings devoted to cattle husbandry (milk and/or beef). In this respect a graph of these farms is given which is no longer based on the constant sample but on the whole of the accounting sample.

## WEATHER CONDITIONS

1971

After some changeable weather (particularly in October 1970), winter began with very harsh weather to be abruptly broken around the 10th of January by a mass of maritime air which benefited the entire Community, with the exception of the most continental areas (North Italy and South Germany). Towards the end of February wintry weather returned and continued until the end of March. In the spring, the weather was favourable to crops almost everywhere in the Community. There was very little frost damage and growth conditions were satisfactory for all types of crops especially cereals.

At the beginning of June, bad weather caused some serious damage in Southern Germany, in most of France and in Northern Italy where growth of certain vegetable crops was somewhat retarded. Summer fruit production, particularly in certain areas of France and Italy, was less than in 1970 on account of over-abundant rainfall and changeable weather. At the end of July, very high temperatures were recorded throughout the Community, reaching 36° in the upper Rhine valley and above 37° in South-East France. The sunny weather was however broken by short periods of violent thunder storms. Changeable weather made for difficult harvesting in the North but, nevertheless, the effect of very varied weather conditions was favourable for all types of crop; there was a record crop of cereals in every country in the Community.

After pleasant, calm weather at the end of the summer, autumn ushered in very low temperatures throughout the Community, with rainfall that varied considerably from one Community region to another. Winter conditions began in mid-November with frost and snow in the North of France, Germany

and the Benelux countries and continued until the end of November in the northern regions of the Community. On the other hand, low pressure conditions in the South (South of France and Italy) were marked by short heavy downpours. In December, the weather as a whole was calmer and milder.

1972

The year began with unusually heavy rainfall, particularly between the Massif Central and the Pyrenees.

Temperatures in January were generally below normal except in Italy and France, particularly in the South and West. Beginning in February (4/5), temperatures rose sharply throughout the Community, while storms of almost hurricane force raged in the West of France. Precipitation, usually rain, was more intense in the South of France and the Po Valley.

At the end of winter very bad weather was recorded; there were floods in the South (Naples and Sicily) as a result of torrential downpours, and avalanches were set off by heavy snowfalls in the north.

In the first days of spring, the weather was relatively sunny and dry while temperatures throughout the EEC fell slightly.

In April, after some weeks of drought, abundant rain fell in the north of the Community. On the other hand, in Italy, rainfall was slight and very localized, being abundant only for a short time.

In May, in nearly the whole Community, the weather was changeable with maximum temperatures approximating to summer levels and the lowest temperatures being cold for the season, except in Italy where in the

last third of the month anticyclonic conditions reigned with clear blue skies and nearly normal temperatures. At the beginning of the summer the weather was distinctly cooler than normal throughout the Community. In some places, for example in the Paris basin, daily maximum temperatures at the end of the month of June dropped to levels not recorded since 1873. The rainfall recorded in many regions, in particular in the South of France and in Germany exceeded the seasonal mean.

The summer thereafter continued fine in all the countries of the Community. The weather which was very hot and sultry at times was broken by sudden violent thunder storms of almost torrential force. Towards the end of August, the weather in Italy was largely influenced by low pressure areas which brought about heavy showers, particularly in the Rome region where there were floods. This rain was said to be the heaviest in the last 20 years.

At the beginning of autumn, the weather was cool throughout the Community. Night frosts dropping to  $-5^{\circ}$  occurred in Northern France (mid-October), the Benelux countries and Northern Germany.

The autumn weather was almost normal in nearly all the Community countries except in the Po Valley (Italy) where towards the end of November temperatures occasionally reached  $25^{\circ}$ . The weather in December was milder than usual throughout the Community, with heavy rain on the Mediterranean coast of France, while moderate night frosts were recorded in Northern Italy.

## YIELDS OF CERTAIN CROPS

"1971" and "1972" can both be considered as excellent farming years.

Favourable weather conditions aided the growth of crops and gave good harvesting conditions. The 1972 cereal crop was outstanding, with record yields being attained.

The following table gives a summary of yields from the main types of crop, as recorded by returning holdings. Although these yields are slightly higher than those given in statistical publications, the trend is consistent with such data.

Yield per hectare of certain crops in 1971 and 1972

Crop	Yields recorded by the F.A.D.N.		Yield trend indices ∅ 1968-70 = 100			
			F.A.D.N.		Statistics (*)	
	1971 (q/ha)	1972 (q/ha)	1971	1972	1971	1972
Common wheat	42.3	44.9	108.4	115.1	113.4	120.0
Barley	37.8	42.0	111.8	124.2	108.4	119.3
Maize (grain)	57.7	49.9	105.1	90.8	109.4	98.1
Sugar beet	465	396	100.0	85.1	104.6	101.3

(\*) Source: SOEC

a) CEREALS1971

Sowings of winter cereals took place under extremely favourable conditions in all Member States. Destruction of sowings by frost was very limited as a result of the mild winter. Planting of spring cereals also went well. Even though there were some reports of temporarily slow growth from certain regions, both crop development and harvest conditions were in general favourable, with the result that exceptionally high yields were attained. For cereals overall average yields were the highest yet recorded - 36.7 q/ha - with record yields also from most of the individual grain crops. Wheat (35 q/ha) and maize (55.3 q/ha) constitute remarkable results.

1972

Good weather helped to speed up work on winter cereals. Spring sowings were carried out early, except in certain areas of France and Italy where they were somewhat delayed by excessive rain. The steady rains recorded since the end of March had a favourable effect on germination and harvesting, with the result that record yields were obtained. Cereal yields (37.7 q/ha) exceeded 1971 levels by 2.7% and were higher by 20.8% than the 1965-69 average. The 1972 cereal crop was the largest ever recorded, the total wheat crop amounting to 35,813,000 metric tons against 34,277,000 metric tons in 1971. This increase was due solely to improved yields. The grain maize crop declined once more as a result of lower yields in France, whilst barley recorded the highest yield of all types of cereals, up 10.3% on the preceding year.

b) POTATOES1971

A record potato harvest was also obtained, with yields of 255 q/ha, a figure substantially higher than in preceding years (5 year average, 1965-69: 226 q/ha). Average yields, both for early and late potatoes, rose considerably, reaching 182 and 245 q/ha respectively.

1972

Despite a yield exceeding the 1971 level by 5.4%, production continued to decline as a result of a reduction in the area under cultivation (-9.5%). An increase in yields was noted both for early and other varieties of potatoes.

c) SUGAR BEET1971

The average sugar beet yield was also the highest yet recorded in the Community, at 446 q/ha. This figure is substantially higher than the average for recent years (1965-69), which was 417 q/ha. The high yield of 469 q/ha attained in France contributed substantially to this record crop, which was aided by excellent weather conditions.

1972

The slight decline in production in relation to the 1971 level results from a lower yield (438 q/ha against 446 q/ha). Nevertheless, the 1972 yield was up by 12.5% on the 1965-69 average (417 q/ha).

d) FRUIT GROWING1971

Total fruit production reached approximately 18.1 million metric tons, lower than in the record years 1969 and 1970, but nevertheless maintaining the high level recorded since 1968. Satisfactory average yields were obtained in the Community for all the principal varieties of fruit. Among Member States, Germany, Italy and Belgium had lower yields than in the preceding year, whilst in France, on the other hand, yields rose slightly. In the Netherlands, yields were at about the same level as in 1970.

1972

Fruit production (including citrus fruits) declined by 9% on the previous year's level; the principal cause was the low yield in Germany, especially of apples. Italy was the only country in which overall fruit production was practically unchanged, both in relation to the 1971 level and to the 1965-69 average.

For the Community as a whole, the apple crop, which amounted to 5.4 million metric tons, was the lowest recorded since 1965. In Germany, production of this type of fruit declined by about 37.4% on the 1971 level (1971: 19 million metric tons, 1972: 1.2 million metric tons).

e) VINE GROWING1971

Production fell to about 133 million hl in 1971, from the exceptionally high level reached in 1970. The per-hectare yield declined to 57 hl (against 68/hl/ha in the previous year) with the result that vine growers, especially in the northern regions, suffered losses.

1972

Community wine production continued its decline, being 3% lower in 1972. In relation to the previous year, Germany and Luxembourg recorded striking increases, whilst in France and Italy production declined by 3% and 5% respectively.

\*

\*

\*

In general, the two years "1971" and "1972" can be considered as excellent from the yield point of view, overall production per hectare being especially high. As a result of favourable weather conditions at harvest time, produce was also of very high quality. These factors partly explain the high incomes noted in the two years.

The following tables show the yields for various crops with a breakdown into region and farm category. They illustrate the considerable changes which have occurred.

## MILK YIELDS

In France, Italy and Belgium the milk yield per cow is in general lower than the Community average. The best yields are recorded in the Netherlands and in Germany.

The following table presents a summary of milk yields recorded in the returning holdings of the Member States: in general their pattern corresponds to that emerging from statistical data.

Country	Yields recorded in the FADN		Indices of yields (average for 1968/70 = 100) (1)			
			FADN		Statistics (*)	
	1971	1972	1971	1972	1971	1972
D	3860	3897	103.5	104.5	102	104.5

EEC	3709	3791	104	106.5	99	102.5

(1) For Italy and EEC 1970 = 100

(\*) Source: SOEC

The discrepancy between the average milk yields for the returning holdings and those obtained from statistics can be explained by the fact that the returning holdings concerned are drawn only from farms specialising in cattle - included in types of farming 336, 310, 340.

The average annual yields of milk per cow in the groups of returning holdings belonging to category 336 in "1971" and "1972" (3,459 kg and 3,594 kg respectively) are, however, quite close to the figures recorded for Community agriculture as a whole (3,320 kg and 3,424 kg respectively). Also the rate of change from 1971 to 1972 is of the same order (about 3% from both sources of information). However, it should be noted that in the longer term the figure for returning holdings specializing in milk production tends to rise more sharply than the figure for all farms producing milk: index = 106.5 against 102.5 in 1972, index = 104 against 99 in 1971 (1970 = 100).

The productivity of dairy cattle also varies greatly between groups of holdings and indeed from one country to another. Broadly speaking holdings in the Netherlands are ahead in this field with an average annual yield of 4,602 kg in "1971" and 4,568 kg per cow in "1972" (FADN: Farm types 336, 310 and 340). These yields exceed by 1,477 kg and 1,196 kg respectively the yields achieved by the French returning holdings. These differences are also confirmed by statistical data.

As in previous years there are considerable differences according to the size of the dairy herd and for the same size of herd according to the area of the holding (cf. table below).

CHANGES IN THE STRUCTURE OF FARM COSTS (INPUTS)  
BETWEEN "1971" AND "1972"  
IN PARTICULAR TYPES OF FARMING

This annex gives tables and graphs resulting from a special analysis of accountancy data for the years "1971" and "1972".

For this analysis only those holdings have been taken which represent at least 50,000 holdings per system of farming in the Community.

First of all the table of figures gives, for each of these systems of farming studied, the distribution amongst Member States of the number of returning holdings and the number of farms in the field of survey represented by these returning farms.

There follows a series of diagrams derived from a weighting of the results from the returning sample based on data from the 1966/67 structure survey. The first of these diagrams (page VII - 38) corresponds to the whole of the field of survey covered by the returning holdings in the analysis. It shows the level and the cost structure by type of farming. The second diagram (page VII - 39) gives the changes in the relationship between the costs of the four main cost elements against the gross production, according to the types of farming being considered. The following diagrams (page VII - 40 to 50) are each devoted to one type of farming. They provide a picture of the differences in total amount and in the cost structure per hectare recorded in each of the Member States, at the level of that part of the field of survey represented by the returning sample.

SPECIAL NOTE

These results vary according to the system of farming and again according to the country. Their significance is notably dependent upon the coverage of the field of survey as well as on the representativeness of the accounting sample. It is known that at the present stage of development of the FADN, these factors differ between farming types and from country to country. Furthermore, it must be assumed that the size of farm corresponding to a given system may be very different according to the country (cf. table VII - 38).
