FARM INCOMES in the European Community **1990/91**

including selected results for 1986/87 to 1989/90

***Farm
Accountancy
Data
Network***

Commission of the
European Communities

This report has been prepared by the unit A-3 "Analysis of the Situation of Agricultural Holdings" of the Directorate General for Agriculture (DG VI). It presents results using data collected in close collaboration with Member States in the Farm Accountancy Data Network. The report is edited by Bernard Brookes.

Text and tables completed 19 November 1992. Versions will follow in German, French and Italian.

IMPORTANT!

You have acquired a copy of *Farm Incomes 1990/91*, which is available also in French, German and Italian versions. This report presents FADN results in graph and table form. The main body of results refer to the accounting year 1990/91. Inevitably it takes time for accounting data to be collected and corrected, and the collection periods end with a spread of months. It is our aim in future editions to make the results available as soon as possible after the end of the accounting year.

In this edition there are detailed tables in section 4 which follow the pattern of the earlier publications of results only. In this report considerable supplementary material (such as general information on the survey, graphs and structural information) have been added. In the next edition it is intended to provide this block of detailed tables on diskette rather than in printed form.

For designing the next report, it would help us if you reply, even partially, to the following questions. You can reply in any official language of the Community.

- Where are you active?

in an official economic or statistical service: analysis

in an official economic or statistical service: research

in a farmers' or producers' organisation

in university research

in third level teaching

in private consultancy work

in another activity (please state)

- Would you like to see any general additions to the report?

- Could you suggest any parts of the report which could be left out?

- Are you interested in obtaining *specific* information additional to that included in this report?

(e.g. additional distributions/ more detailed result variables; on diskette, or directly accessible on a data base). You can give a detailed answer if you wish.¹

- What is your mother tongue?
- In which other language, if any, would you prefer this report?
- Do you ever refer to FADN information in the report "The Agricultural Situation in the Community"?

INTRODUCTION.

The agricultural sector in the European Community has great diversity of structure and production patterns. Both very large farms, perhaps covering several thousand hectares and with large investments in machinery and equipment, and the smallest almost subsistence units with small parcels of land, scarcely sufficient to provide an income for the farm family, fall into the European agricultural spectrum. This diversity makes it important to provide information about the structure of farming and the different situation of farms, and in particular concerning income and welfare. Some farms behave financially as medium size businesses, whilst others could be compared to one-man businesses: the comparison of a paper-mill to a newspaper seller would be of the same scale.

Of those farms large enough to fall into the field of interest of the EC Farm Accountancy Data Network (the smallest farms are for practical reasons difficult to include, as a basic requirement is the keeping of accounts), the largest 10% have a turnover 6 times as great as the smallest 10%. This and other differences can be explored using the tables and graphs presented further on in this report.

The report provides detailed farm output, cost and income results for a wide variety of farm groups (such as different farm sizes and different production types) in the European Community and Member States, using data from the Farm Accountancy Data Network (FADN). The Network collects farm accounts data, using the same returning form, from almost 59000 (in 1990/91) businesses. Detailed results are given for 1989/90, and summary results for 1990/91 and earlier years back to 1986/7 to make comparisons possible. Results are given in real terms to make comparisons even easier..

More emphasis is put on graphs than in previous reports from FADN. The accompanying text is intended only to guide the reader through the graphs and the tables serve to give additional detail.

In order to produce average results for groups or countries, and because of different rates of sampling, individual farm accounts results are weighted during calculation by the Commission Services. Particular attention is drawn to the revision of the weights used compared to earlier reports. This means that results for 1986/7 in "Economic Results of Agricultural Holdings No. 5 - 1986/7", published in 1990, will differ from results for the same year in this report, and will not be strictly comparable with them. Longer time series of results, some from as far back as 1981/2, will be available in the forthcoming publication "Farm Incomes in the European Community in the 1980s".

NOTE:

Results from FADN for Member States may differ from those produced by national farm accounts networks due to differences in methodology and calculation.

All results for Germany are for the territory prior to November 1990.

1. THE STRUCTURE OF FARMING IN THE COMMUNITY

THE FIELD OF SURVEY OF THE FARM ACCOUNTANCY DATA NETWORK

According to the latest EUROSTAT Farm Structure Survey results there were 8,6 million farms in the Community in 1987, with an average size of 13,4 hectares⁽¹⁾ (see table 1.2). There is a wide range of average farm size, from 4,0 hectares in Greece to 67,2 hectares in the United Kingdom.

The *FADN field of survey* covers the so-called professional farms in the Farm Structure Survey, and so excludes the smallest (and often part-time) farms below the FADN "thresholds" (shown in tables 1.1 and 1.2). This is particularly the case in Italy and Spain (see graph 1A). The average size of farm in the Community FADN field of survey is 21,4 hectares. The average size in Member States ranges from 6,4 hectares in Greece to 97,5 hectares in the U.K.

The average FADN farm is closest to the average "all farms" (see table 1.2) in Denmark (average area is 5% higher) and furthest in Italy (average area 66% higher). The average economic size of farm and labour input (in Annual Work Units) per farm are correspondingly greater for farms in the FADN field of survey (see table 1.1).

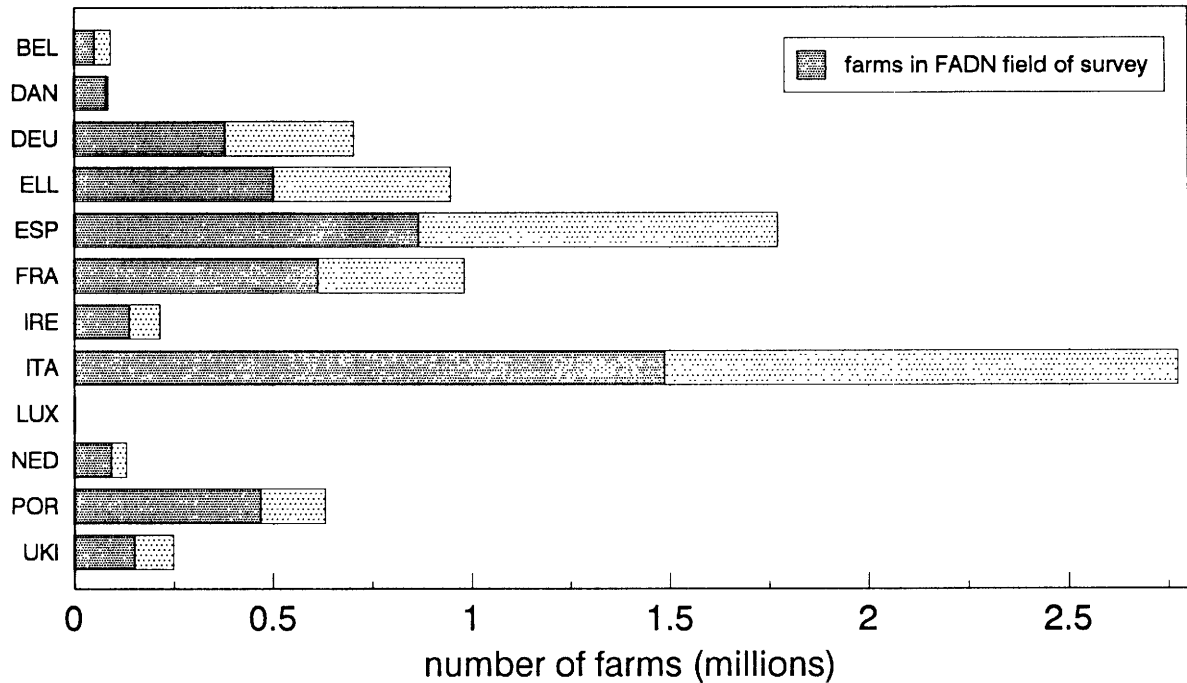

Graphs 1A and 1B show the FADN *coverage* (see table 1.1 for the corresponding numbers). Although coverage of farms is apparently poor (graph 1A) the coverage of agricultural value added on farms, as represented by the coverage of the total of standard gross margins, is good (94%). In any case the FADN sample is selected in the first instance to cover agricultural production and not the very small holdings which contribute little to aggregate agricultural production.

The *farm size distributions* of both the Farm Structure Survey and FADN are given in table 1.3, together with an indication of the coverage of the FADN field of survey in each Member State.

2. INCOME RESULTS.

2.1. COMPARISON OF 1990/91 AND 1989/90.

The graphs which follow (pages 11 to 13) show the changes for 1990/91 as compared to 1989/90.

Tables of results in real terms, for the above years and earlier years going back to 1986/87, (table 3.2) are given at the end of section 3 (pages 50 to 69).

All results are treated in real terms, with the absolute figures in ECU at 1990 values (see table 3.1).

INCOMES

Between 1989/90 and 1990/91 the average income (Family Farm Income or FFI) per farm in the FADN fell by 11% in real terms. The value of output dropped (by 6%) and input costs were not sufficiently reduced to maintain incomes (intermediate consumption goods and the average depreciation charge both decreased 4%, the sum of rent, wages and interest paid, by 3%).

Changes in income ranged from nearly 60% for Denmark to a small (1%) increase in France. Portuguese farms experienced a large fall of nearly 27%; those in Belgium, Germany, Luxembourg and the Netherlands showed falls of between 20% and 25%. Only in France did income remain almost unchanged (a marginal 0.6% increase).

Interestingly the *Cash Flow* result, which is a closer indicator than Family Farm Income of the cash income that farmers receive, was often less severe than the corresponding change in FFI. The aggregate average fall in Cash Flow for the Community was 6% (as compared to 11% for FFI). Indeed, in France, Cash Flow increased by 7% (whereas FFI was almost unchanged), and most dramatically, in Denmark, Cash Flow remained steady (+0.5%) whilst FFI fell by a dramatic 59%. Other notable changes in Cash Flow were in Spain (no change, -8% for FFI), Luxembourg (-15% , -24% for FFI) and the U.K. (-10%, -15% for FFI). Results for Cash Flow and Family Farm Income were closest in Greece where both fell appreciably (Cash Flow -10%, FFI -11%).

INCOME AND PRODUCTION TYPE OF FARMING

A key to the production patterns of the types of farming is given in table 5.1.

References to income are always to Family Farm Income (FFI), and to output to "total output", which is the final value of all production on the holding.

For *CEREAL* farms, incomes (Family Farm Income) fell by 9% on average, ranging from a fall of over 30% in Denmark (where income was already negative in 1989/90) to a rise of over 100% in Germany, where a negative FFI became again positive, although low in absolute terms. Large falls in FFI were also recorded in Greece (-33%) and in France (-19%). Circumstances were very different (see table 3.2). Danish farms suffered from big increases in rent and interest costs, Greek farms from a large fall in output and French farms from a combination of reduced value of output and higher intermediate consumption

costs. Average incomes of Spanish and U.K. cereal farms increased, by 11% and 17% respectively. In both cases the value of output was actually *less* than in 1989/90, but this was more than compensated by all-round falls in input costs.

On *GENERAL CROPPING* farms the average income results was a fall of 11%. The Danish average moved from a low positive to a negative income result. Large falls in FFI were observed in Portugal (-36%), Germany (-23%) and Belgium (-19%), where there was a general drop in the value of output. Only in Spain (+1%) and the U.K. (+3%) were there small increases. In the case of Spain the almost unchanged average income situation hid large falls in both output and input values (see table 3.2).

HORTICULTURE holdings showed great volatility, changes in income varying between a fall of 56% in Portugal to a rise of nearly 200% in Germany. In Italy, the single most important country in this type group, average income rose by 28%, due especially to increased value of output. The large fall in Portugal may have been influenced by many more small farms falling into this type of farming group, pulling down both average output and income. The average fall in incomes for the Community was 5%.

For *VINEYARDS* there was a small rise in the average Community result (3%), but considerable difference between countries, with large falls in Germany (-44%) and Luxembourg (-25%). Italian producers experienced almost no change (+1%) and their French counterparts a large rise (+8%) in average income. German vineyards suffered a 21% fall in total output, whilst Luxembourg producers, although benefitting from a higher value of output, suffered a very large increase in intermediate consumption costs (+49%). French vineyards gained from a modest increase in output.

Incomes of *OTHER PERMANENT CROPS* farms dropped by an average 2%, and most notably in Portugal (-22%), the Netherlands (-37%) and the U.K. (-44%, but on a small sample). Both countries returned large falls in output. French holdings showed a large rise in output and very large upturn in income (+46%). Incomes fell by an average 6% on Italian farms, due to a small fall in output.

The average Community *DAIRY* farm suffered a fall in the value of output (-8%) giving an average drop in income of 19%. Danish farms reacted most and showed a 36% fall in income, followed by Belgium (fall of 24%), Spain and Ireland (falls of 23%), the U.K. (-22%) and Germany (-21%). French farms were the important exception and benefitted particularly from an increase in the item "current grants and (net of) taxes" giving almost no change in average income (+0.7%).

Incomes of *DRYSTOCK* farms fell by 4% following a drop in the value of output of 6%. The result would have been worse had not input costs (notably intermediate consumption and depreciation) fallen significantly (by 2.4% and 7% respectively). Hardest hit were farms in the U.K. (-31%), Belgium (-27%) and Luxembourg (-22%). An average 6% increase in incomes in Italy and 4% in Ireland were recorded. Dutch farms (though a small sample) increased their income by 14%. Average income remained unchanged in France. There the fall in output (-5%) was compensated notably by a 52% increase in "current grants and taxes".

Average income of *PIGS and/or POULTRY* farms fell by 19%. Very big income drops were seen in many countries (Denmark, Germany, Spain, the Netherlands and Portugal with changes of -60% to -23%) after an exceptionally good result in 1989/90. The overriding factor in the income fall was reduction in output. However in both France and Italy there were rises in output, giving average income results of +6% and +17% respectively.

MIXED farms suffered a fall in the value of output (-8%) which led to an average 19% fall in income. There was a dramatic fall in Denmark (-71%), where profit margins are very sensitive (in 1989/90 the value of all inputs represented 85% of the value of output). Large falls in income were recorded also in Luxembourg (-42%), the Netherlands (-31%), Germany (-28%) and Belgium (-26%). Income falls of between 15% and 20% were recorded in the U.K., Ireland, Greece and Portugal. Farms in Italy (representing 20% of all mixed farms) showed a smaller downturn (-9%). Only in Spain did average income rise (by 4%), due to substantial falls in wage and interest payments, and a much reduced depreciation charge.

ASSETS, LIABILITIES AND INVESTMENT

For the Community *TOTAL ASSETS* dropped an average 3.7% between 1989/90 and 1990/91. Behind this average were marked falls in Spain (-13%) and Portugal (-12%), whilst no other Member State showed a fall of more than 6%. Changes in *CURRENT ASSETS* did not follow this trend and the Community average remained unchanged. However movements were very different in Member States, and average values rose sharply (+34%) in Italy (total assets by only 1%), and fell by 15% in the Netherlands (total assets -2%). Average current assets declined also by 7% in both Belgium and the U.K. (total assets fell by 1.5% and 6% respectively).

LIABILITIES fell 2.4% overall for the Community. There were improvements (i.e. reductions) of 16% in liabilities in Portugal, 11% in Spain and Italy, and 7% in Germany and the U.K. There was a deterioration (i.e. increase) of 11% in Ireland.

GROSS INVESTMENT was down slightly by an average 3.4%. There was a massive fall of 56% in Spain, and falls of over 5% in Belgium, Denmark, Germany, Italy and Portugal. Only four other countries showed a significant increase in Gross Investment: Greece, by a remarkable 31%, Ireland by 11%, the Netherlands by 9% and the U.K. by 5%.

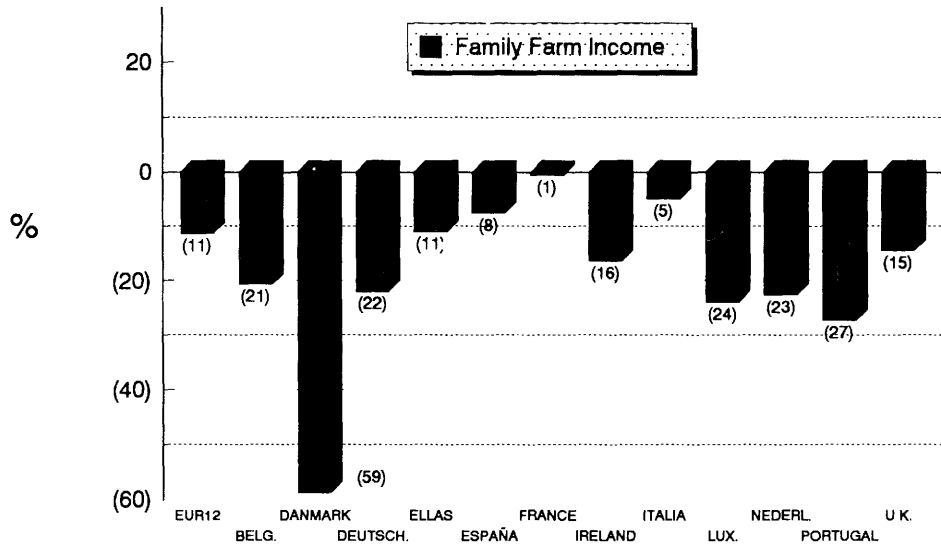

REAL INCOME BY ECONOMIC SIZE OF FARM 1989/90 TO 1990/91.

NOTE: the proportions of farms in the different economic size classes varies greatly from one Member State to another (certain have no farms in the smallest size classes). See sections 1, 4.2 and 5.2.

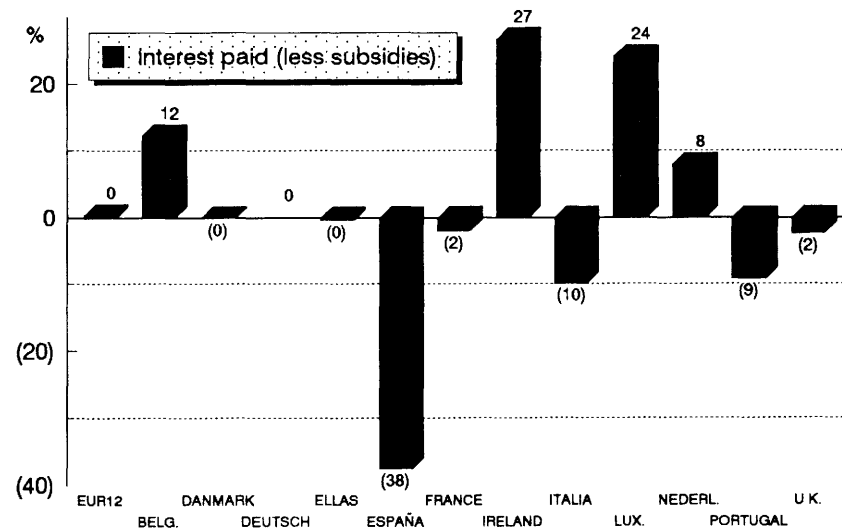

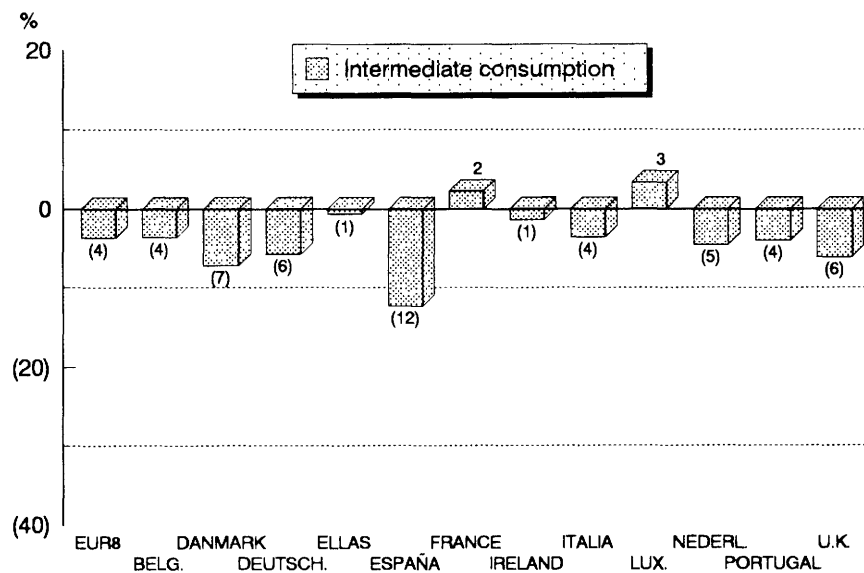

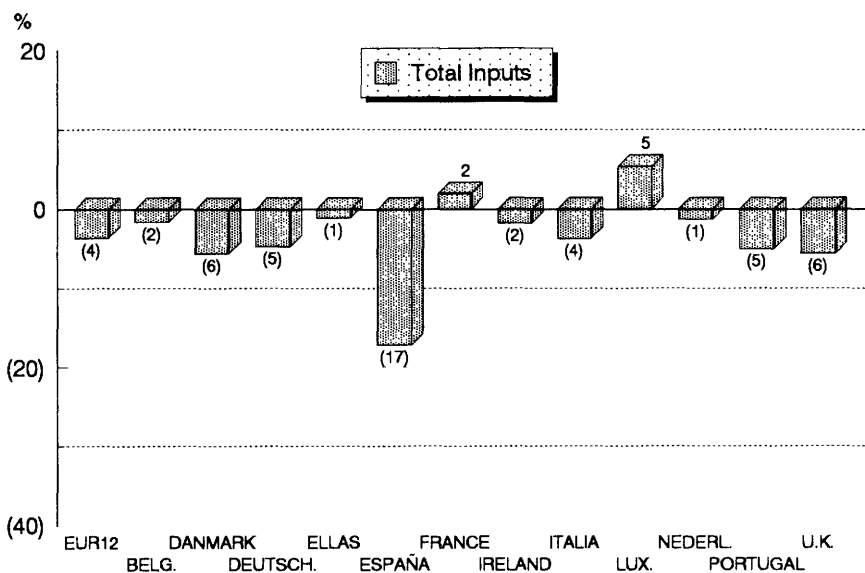

As illustrated in graph 2.4 on page 14, the largest farms in the Community showed the greatest average falls in income (15% as against the all farms average fall of 11%). The smallest size groups ("very small" and "small" farms) showed falls which were close to the average for all farms. The "lower medium" size group of farms showed the smallest decline in average income of all the groups (-6%).

All the farm size groups suffered decreases in output. They were greatest for the small farms (falls of 13% and 11% respectively for the 2 smallest farm size groups) and the main factor responsible for the drop in average income there. For the "large" and "very large" groups a moderate fall in output combined with low margins over total costs were the causes of the large drop in their average incomes.

Graph 2.4.
Changes in farm indicators 1989/90 to 1990/91

2.2. DISTRIBUTION OF INCOMES IN 1990/91

2.2.1. PER CAPITA INCOMES

The distribution of per capita incomes within the Community and Member States is shown in graph 2.5.

The geographical distribution of per capita incomes over the Member States of the Community in 1990/91 is shown in map form in graph 2.6.

The distributions have been calculated for Family Farm Income per Annual Work Unit of unpaid labour (for further details see section 5.1).

Although the graphs take their information only from the FADN field of survey(1), they provide however a useful indicator of the income variation both within and between Member States.

In graph 2.5 most countries show "left-skewed" distributions, that is with a larger proportion of persons with low incomes. The extreme case is Portugal, where over 80% of persons earned less than 4000 ECU. Denmark, Greece, Spain and Italy also have large shares of persons in the lowest income group. The case of Denmark is special, as a very large proportion of farms have a low Family Farm Income due only to high interest costs.

France and Germany also have left-skewed, but more gradually falling, distributions. In Germany 39% of persons and in France 46% of persons earn over 12000 ECU.

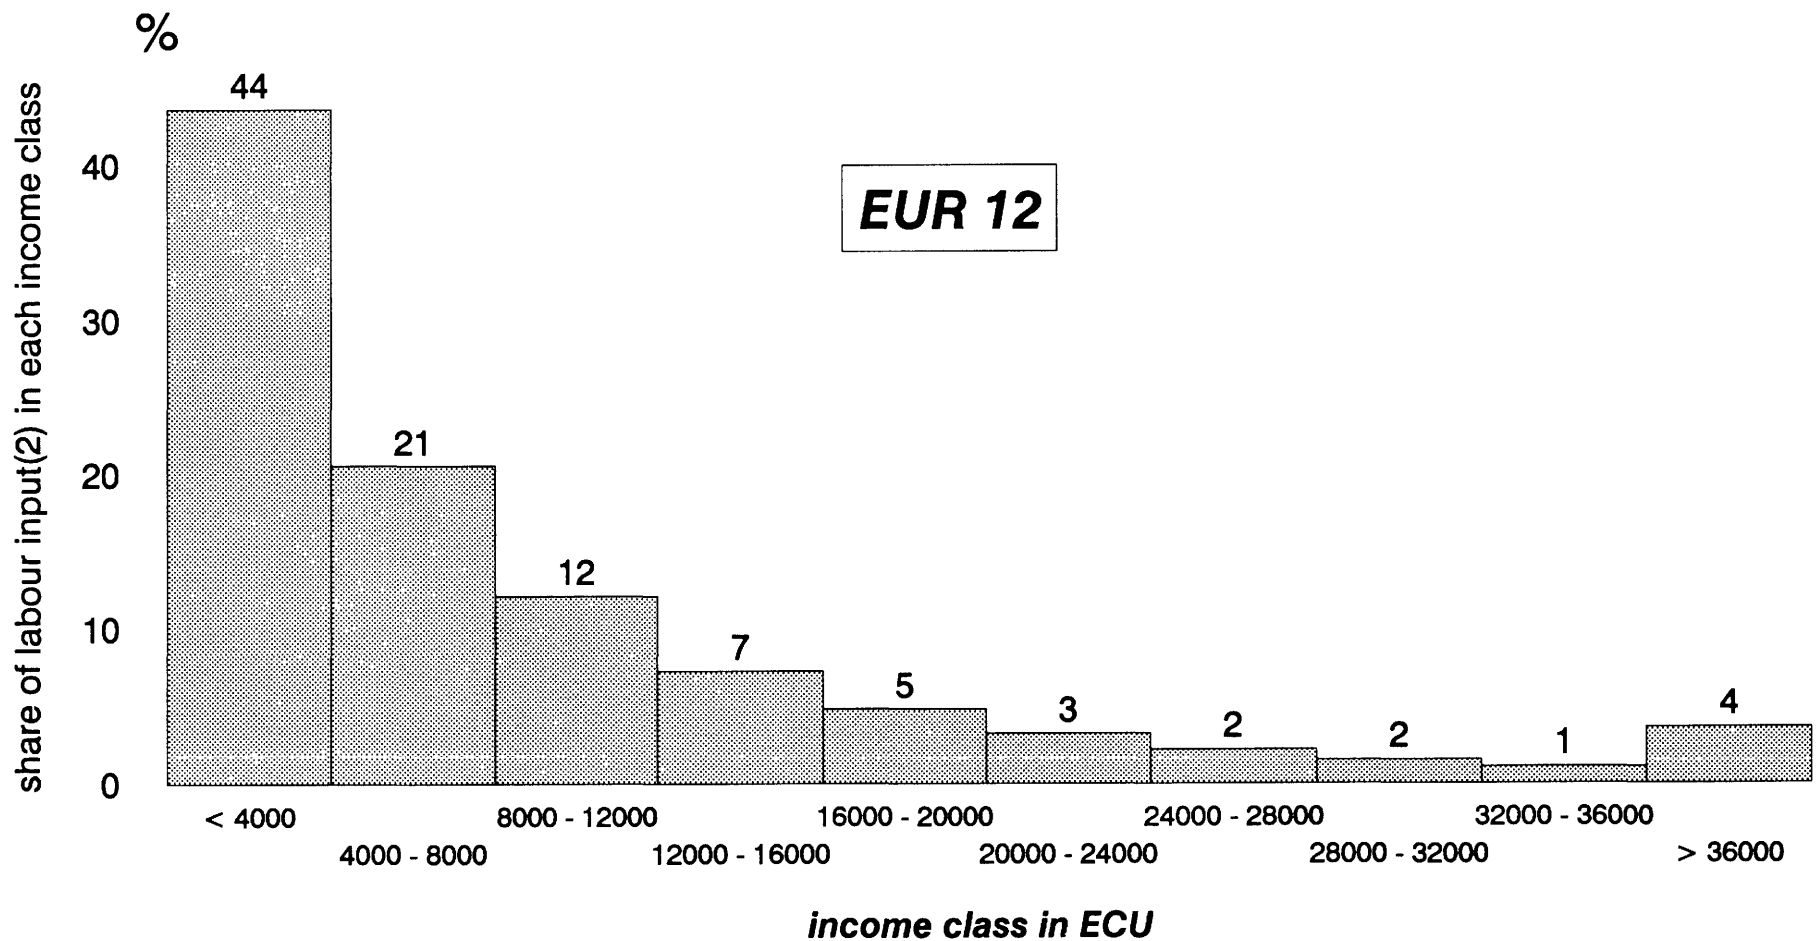

Belgium and the Netherlands have "right-skewed" income distributions, with a large proportion of persons in the highest income class (28% with over 32000 ECU in the Netherlands and 21% in Belgium). This apparent concentration is exaggerated by the limited number of classes used in the graphs, but it still holds that a significant share of persons in agriculture earn high incomes in those countries.

The U.K. shows a "U" shaped distribution, with higher shares of persons in both the lowest and highest income classes. The occurrence of as many as 26% of persons with less than 4000 ECU is very likely due to the farms with financial difficulties (notably high interest shares in farm costs).

The original results used for the graphs are shown in more detail in table 4.4. (results by income per head).

(1) the FADN is at present the only Community source of the distribution of per capita incomes in agriculture.

GRAPH 2.6.

EEC 12 - FAMILY FARM INCOME/FWU - ECU

2.2.2. FAMILY FARM INCOME PER FARM (GRAPH 2.7).

Dividing the FADN farm population into 10 equal parts in increasing order of income gives another view of the disparity of incomes (this time *per farm* incomes) at Community level. Whilst the 10% of farms with the lowest incomes have negative incomes, the top 10% have incomes of almost 60000 ECU on average and account for 58% of the total output of FADN farms. Although the deciles represent very different proportions of total agricultural output (closely following incomes, as shown by the similarity of the top and middle sections of graph 2.7), they cover almost equal shares of the agricultural labour input (as measured in Annual Work Units of unpaid labour).

An analysis of the deciles by Member State (see table 2.1, in particular the lower part) shows the large shares of farms of northern European countries in the top deciles (in fact over half the farms in the Benelux countries) and the large shares of farms in Spain, Italy and Portugal in the bottom decile. However there is a special situation in Denmark and the U.K., where a significant proportion of farms fall into the bottom decile (35% of Danish and 20% of U.K. farms). Farms in Greece, despite their small average size, are thickly clustered around the middle income deciles. These observations are reflected in results for the average income per farm in each member State, which are compared in graph 3.1 in section 3.

Detailed results for the Community, but for a reduced number of groups (5 quintiles rather than 10 deciles), are given in table 2.2.

A closer look at table 2.2 reveals that the 20% of farms with the lowest incomes have on average more resources and higher output than those in the next highest quintile (70% larger farm size; 60% higher total output; 94% higher current assets). Another observation is that farms in the top quintile of farms have much higher average receipts of grants (6.5 times) than those in the lowest quintile. The absolute level of grants and subsidies is relatively insignificant as a share of farm output in all the groups.

weighted using the 1987 Farm Structure Survey

classification using <<1984>> standard gross margins

3. FARM INCOMES : MEDIUM-TERM TRENDS (1986/87 - 1990/91).

On the following pages income results per farm are presented in graphs for the nine FADN type of farming groups (see also sections 4.1 and 5.2). In addition there is one graph showing income *per person* by type of farming and income per person according to (*economic*) size of farm.

TYPES OF FARMING

The average shares of production enterprises found in each *type of farming group* are shown in table 5.1 (section 5.2). For instance, "dairying" farms earn an average 66% of their gross margin from dairying and the average "general cropping" farm takes about 29% of its gross margin from cereals.

The output of *specialist* farms should not be confused with production. The classification according to type of farming was intended to be a proxy for the economic behaviour of the major production systems (for example cereals, wine, milk). However the share of total output of a commodity which is produced on specialist farms alone is very variable. For instance, about two-thirds of milk output comes from dairying farms but less than one third (27%) of cereals output comes from specialist cereal producers (see section 5.2, table 5.3).

INCOME

In all cases *income* is the FADN "*family farm income*" definition, that is the value of farm production less intermediate consumption, depreciation, cash wages, cash rent and interest payments. No deduction is made for the value of the labour of "unpaid" labour (normally family labour). This indicator is close to the EUROSTAT macroeconomic indicator 3 "Net income from agricultural activity". Details of the income indicators can be found in section 5.1.

CURRENCY

All results are given in *real terms*, in ECU at 1990 values (see table 3.1).

The results (per farm) by type of farming group, used in the graphs are given in table 3.2 after the graphs (pages 49 to 69).

GRAPH 3.1 - AVERAGES FOR MEMBER STATES.

The concentration of high farm incomes is evident when looking at Member State averages in this graph, where the Benelux countries stand out a long way ahead. In 1990/91 the average income per farm was almost 11 times as high in the Netherlands than in Portugal.

Over the period 1986/87 - 1990/91 the highest incomes per farm were in the Netherlands and Belgium, followed by Luxembourg and the U.K. The lowest were in Portugal, Denmark, Spain and Greece. The range in 1990/91 was from 37100 ECU in the Netherlands to 3400 ECU in Portugal.

There are several reasons for the differences in average Member State incomes. Size of farm is an important factor contributing to high incomes in the U.K. (with 110 ha) and to low incomes in Greece (with 6,4 ha). In the Netherlands, characterised by intensive farming, it is the value of output per hectare (7700 ECU compared to a EUR 12 average of 1900 ECU) which gives rise to high incomes. In Belgium large margins over costs appear to give producers high average incomes (in Belgium, family farm income represented as much as 39% of the value of total output in 1989/90, and 34% in 1990/91). Portuguese farms are handicapped by a very low value of output per hectare, and, because of the relatively small average size of farm, output per farm is also low. Danish farms, although having a high value output, suffer a large interest burden. Over the period 1986/87 to 1990/91 average liabilities per farm were equivalent to 57% of total assets. Interest payments accounted for 16% of total farm costs and, on average, were equivalent to more than double the family farm income of the farm.

Average incomes in Member States are also considered in the analysis of Community farm income deciles in section 2.3.2.

Graph 3.1.

**REAL INCOME (FFI) per FARM
MEMBER STATE AVERAGES**

C:\BB90\b90all.WK3_msavf.*

GRAPH 3.2 - FARM INCOME RESULTS AND TYPE OF FARMING**(EUR 12)**

Taking out the exceptional case of pigs/poultry, the average results for the types range from 7950 ECU for cereals (the lowest) to 23100 ECU for horticulture (the highest).

Except for the relatively small group pigs/poultry, the long term absolute differences between types of farming are much more important than year on year changes (both 1989/90 and 1990/91 average results are quite close, and not far from the 1986/7 - 1990/91 averages).

Pigs/poultry farm incomes fluctuate considerably due to production cycles - however they are a small group (see graph 2H later).

The types of farming groups with high average incomes are prevalent in northern Europe. For instance, consider the shares of total output from these types of farming (see table 3):-

pigs/poultry: 70% from northern Europe, of which 21% from the Netherlands;

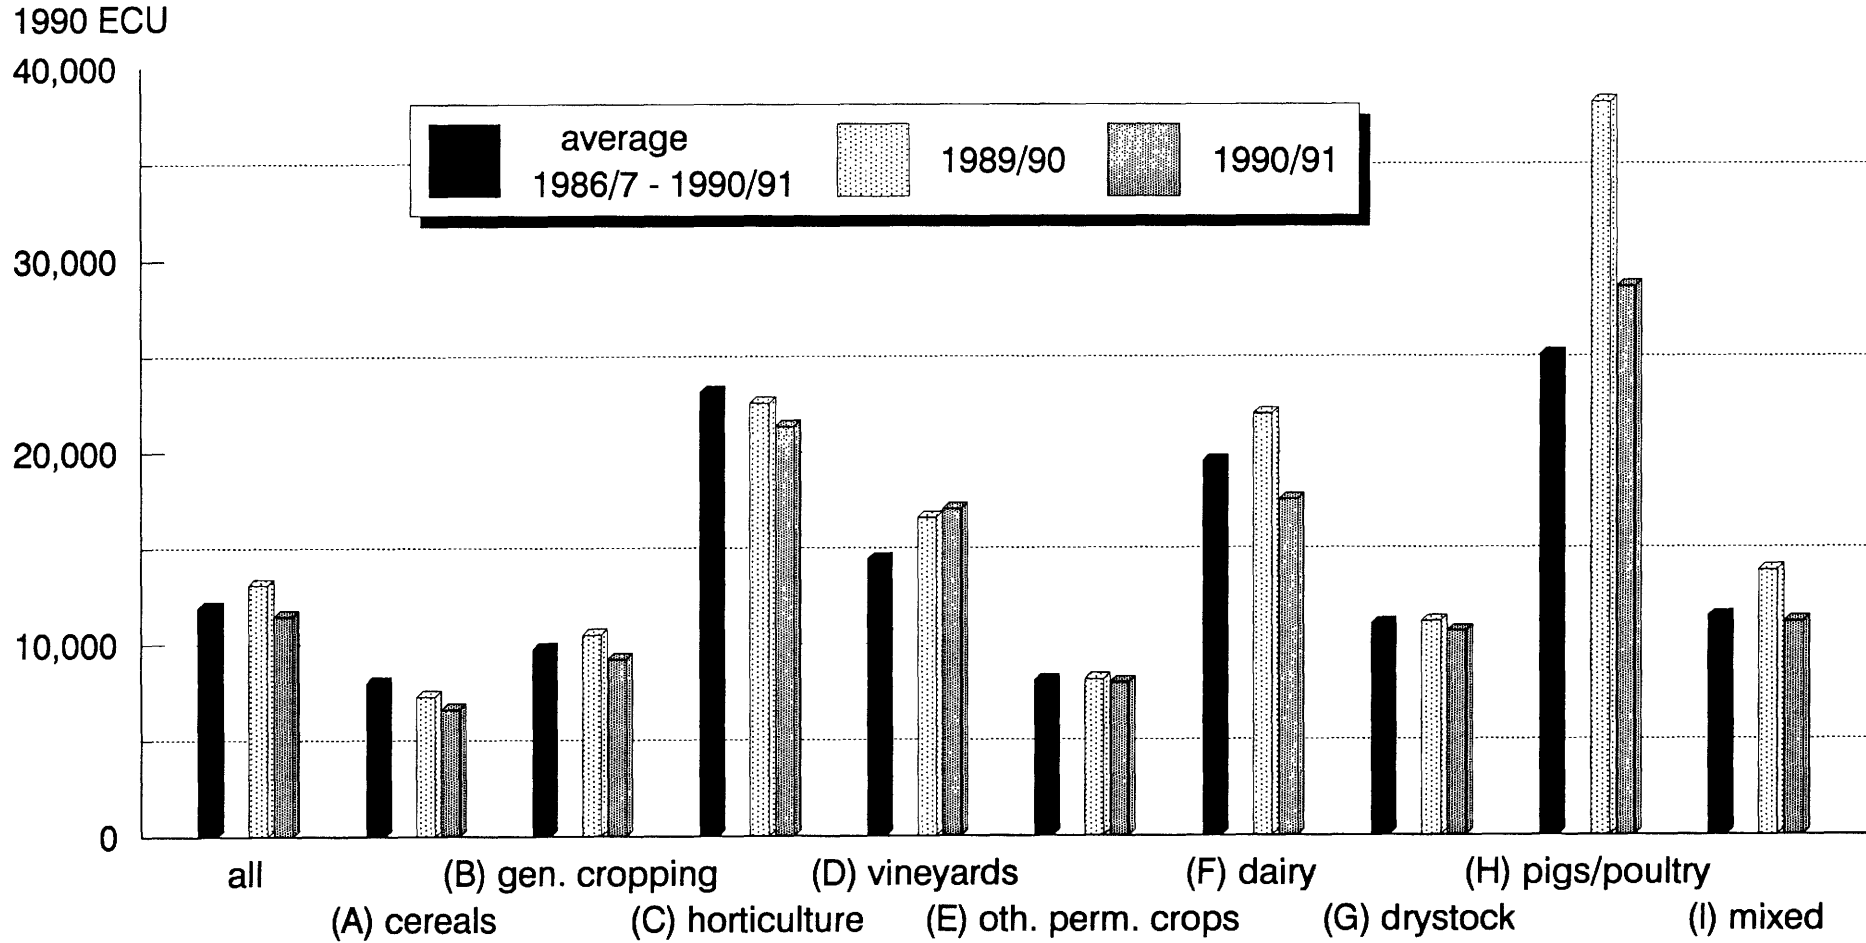

horticulture: 72% from northern Europe, of which 35% from the Netherlands;

dairying: 76% from northern Europe, of which 23% from Germany and 20% from France.

Graph 3.2.

REAL INCOME per FARM (FFI) by TYPE of FARMING

EUR12

\bb90\eurtf

GRAPH 3.3 - CEREAL FARMS.

Spain, France and Italy are the important countries for this group, but have very different production structures. France, with 28% of the total output of this farming type, has only 11% of the farms; Spain has only 21% of the production but 33% of the farms; Italy accounts for 17% of the production and has 32% of the farms (see section 5.2, table 5.2).

In 1989/90 the average French cereal farm was 4.3 times the size of the Spanish counterpart, whilst using only 1.4 times as much labour: an indicator of very large structural differences. The average economic size (see below) of specialist cereal farm was 41.2 ESU in France, 12.0 ESU in Italy and 10.6 ESU in Spain (see pages 49 to 69).

A selection of indicators (average values for all farms) for the most important countries for this type of farming is given in the table below.

	total output	total UAA	yield (soft wheat)	total assets per hectare	UAA / AWU
<i>[1989/90]</i>	<i>ECU</i>	<i>HECTARES</i>	<i>TONNES / HA</i>	<i>ECU</i>	<i>HECTARES</i>

**REAL INCOME per FARM (FFI) by TYPE of FARMING
CEREALS (TF11)**

GRAPH 3.4 - GENERAL CROPPING FARMS.

The largest group in the Community (28% of farms producing 21% of the total output). These farms are most numerous in Italy (38% of the total) and Greece (17%), and most important in production in France (23%) and Italy (22%). This group covers a very mixed bag of farms with a wide variety of crops from northern and southern Europe.

The differences in income and size are closely related to geography: for instance Belgian "general cropping" farms in the FADN are 4 times as large as their Portuguese counterparts (38 hectares compared to 11 hectares) and have incomes 10 times greater.

"General Cropping" farms in Denmark have exceptionally low incomes due to the very high debt burden in that country. On *average* these farms owed 3400 ECU per hectare in 1990/91 and their debts are equivalent to two-thirds of total farm assets and exceed the value of 2 years' farm output.

Some indicators from the main countries for the "general cropping" farm type are given below (averages over all farms in the type).

	total output	Utilised Agricultural Area			total assets per hectare	UAA / AWU
		cereals	other field crops	permanent crops*

* including horticulture and flowers.

Graph 3.4.

REAL INCOME per FARM (FFI) by TYPE of FARMING

GENERAL CROPPING (TF12+60)

GRAPH 3.5 - HORTICULTURE FARMS.

These are most numerous in Spain (30% of Community horticulture farms) and most economically important in the Netherlands (with 35% of the total output of these farms). Italy has an important share of the farms (20%) but these have a relatively small output. Spanish farms also make a large contribution to the combined output (18%) of farms of this type.

In 1989/90, income per farm ranged from 6000 ECU in Portugal to 51000 ECU in the Netherlands, though Dutch farms have only just over twice the average labour input than their Portuguese counterparts.

Size of business is an important factor in determining average incomes in Member States. Because of the heterogeneous nature of horticultural production it is more meaningful to compare the value of output than the area of holding. At the extremes Dutch farms have, on average, a total output or turnover of 273 000 ECU, whilst Portuguese holdings of the same type barely reach a turnover of 12000 ECU (1989/90 figures). In the other Member States average turnover per "horticulture" type holding is about 153 000 ECU in Germany, 222 000 ECU in the U.K., 55 000 ECU in Spain and 38 000 ECU in Italy.

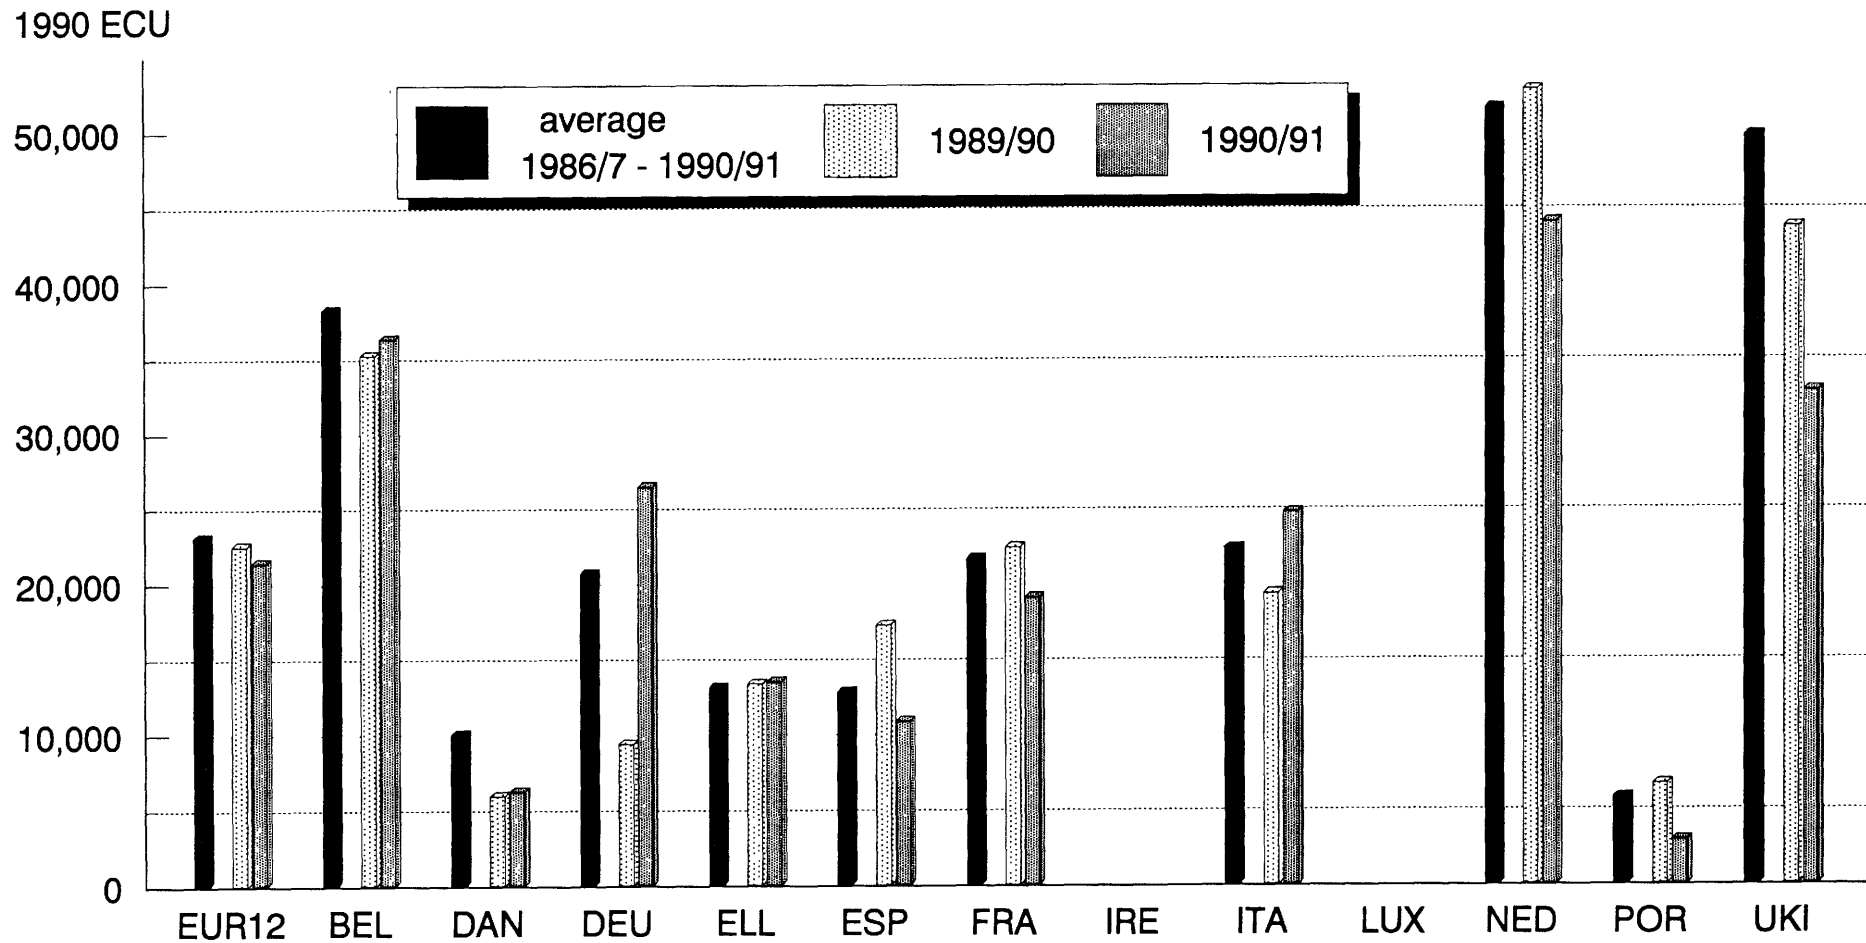

Average indicators per holding for selected countries are given below.

	total output	Annual Work Units	depreciation	total assets
<i>[1989/90]</i>	<i>ECU</i>		<i>ECU</i>	<i>000 ECU</i>
España	54921	3.46	3481	178
Nederland	272985	4.20	38590	480
Italia	37880	2.14	4020	102
Belgium	102211	2.49	12361	153

Graph 3.5.

REAL INCOME per FARM (FFI) by TYPE of FARMING

HORTICULTURE (TF20)

GRAPH 3.6 - VINEYARDS.

Italy has the giant's share of these farms (54%) whilst France has the largest share of the value of production (58%). The next most important producers, Germany and Greece, are a long way behind. The graph shows that French vineyards have a much better economic structure and much higher incomes than Italian vineyards (on average 3.5 times higher between 1986/7 and 1990/91). This is more or less in proportion to the land areas: however labour input was only 1.8 times greater in France than in Italy.

Production structure and quality are primordial in the economy of vineyards, as shown by the following table of areas and value of production in the leading producing countries of the community (FADN results for 1989/90).

The average structure of holding in the 5 most important countries with "vineyard" holdings very diverse, as shown in the table below.

<i>[1989/90]</i>	average area of vines (ha)	value of output per hectare vines
Germany	4,2	12578 ECU
Greece	2,3	4425 ECU
Spain	11,0	1143 ECU
France	12,4	6866 ECU
Italy	3.1	4978 ECU

VINEYARDS (TF31)

C:\BB90\b90vin.WK3 vin.ch1

GRAPH 3.7 - FARMS WITH OTHER PERMANENT CROPS.

The average farm in this group obtains half of its margin from fruit crops, and the remaining half is split almost equally into olives (and olive oil), wine and other farm enterprises (including fruit and nursery stock) (see section 5.2, table 5.1).

This is an important group, including 15% of the farms in the Community FADN. Just under half of the farms - which represent almost 40% of the total output of these farms - are in Italy. There are also considerable shares of the total farms in Spain (21%) and Greece (20%). The farms in these 3 countries have less than average output for the group, whilst the relatively small numbers of farms in France, the Netherlands, Germany and the U.K. have well above average output. These northern countries have much higher incomes, except the U.K. where results were very poor for the 3 years 1986/7 - 1988/9.

Note that the countries with the highest incomes (Belgium and the Netherlands) have nationally relatively small numbers of farms - less than 4% of their total farms - in this type.

The average area of farm and income for the most important Member States are:

	average area of holding (ha UAA) <i>[1990/91]</i>	average family farm income <i>[1986/87 - 1990/91]</i>
Greece	5,1 ha	7851 ECU
Spain	12,3 ha	5722 ECU
France	17,9 ha	22310 ECU
Italy	4,3 ha	8229 ECU

Graph 3.7.

REAL INCOME per FARM (FFI) by TYPE of FARMING
OTHER PERMANENT CROPS (TF32+33+34)

GRAPH 3.8 - DAIRY FARMS.

The Community leader is Germany (territory prior to November 1990) with 22% of the farms and 23% of total output of all "dairying" farms. It is followed closely by France (21% of farms and 20% of the output). Italy, the Netherlands and the U.K. are also important for this type of farming.

In 1990/91 incomes per farm ranged from 6300 ECU in Portugal to 36400 ECU in the Netherlands. Although the average value of output of Dutch dairy farms is almost ten times that of the Portuguese, the Dutch have a slightly *lower* labour input per farm.

Below are some indicators for the principal countries in this type:

<i>[1990/91]</i>	average number dairy cows	farm labour (AWU)	average family farm income
Germany	26	1.5	15188 ECU
France	30	1.5	17414 ECU
Italy	18	1.9	22785 ECU
Nederland	50	1.6	36441 ECU
United Kingdom	69	2.2	22640 ECU

Graph 3.8.

REAL INCOME per FARM (FFI) by TYPE of FARMING

DAIRY (TF41)

GRAPH 3.9 - DRYSTOCK FARMS (CATTLE/SHEEP/GOATS).

Two-thirds of these farms are to be found in France, Spain, Italy and Ireland. In terms of output France is the leader (27%), followed by Italy (21%). Average farm income is very high in Belgium, but this is an exceptional case at Community level. Incomes in Italy and the Netherlands are well above the average for the group. The largest drystock farms (in terms of area) are in Italy. Incomes are lowest in Portugal and low in Ireland due especially to low output per farm.

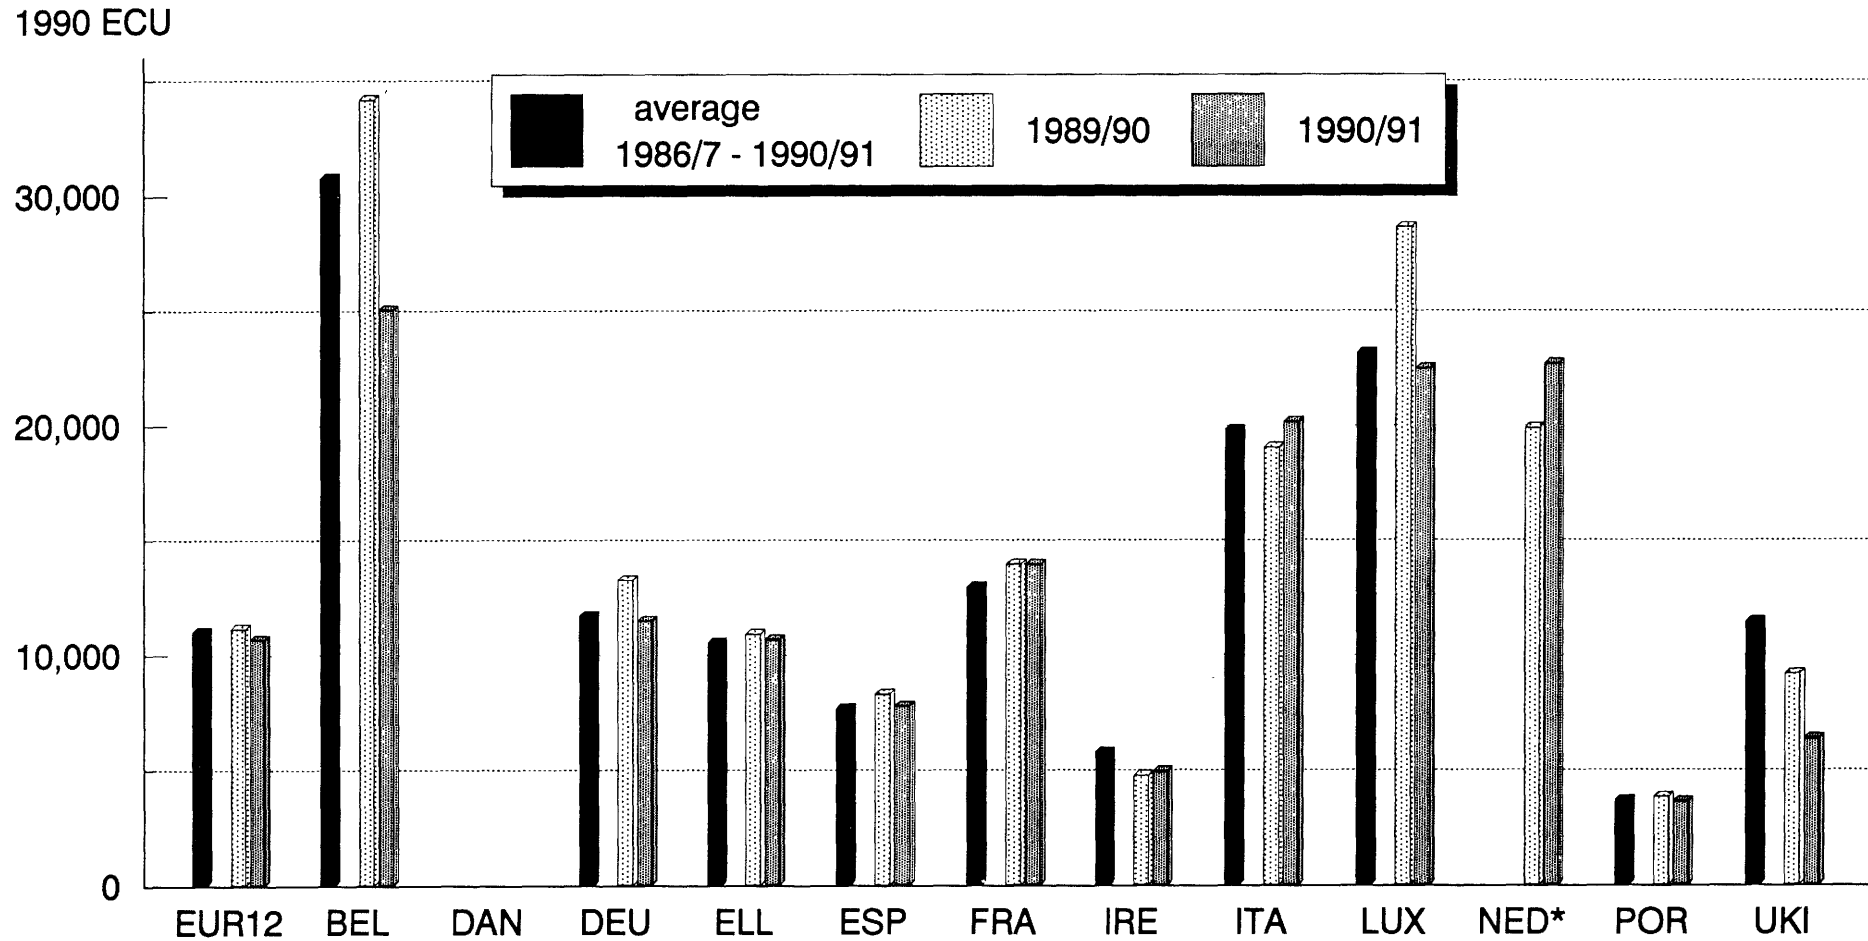

Given below are the relative output and herd sizes of the more important countries for this type of farming:

<i>[1989/90]</i>	average number grazing livestock units (excl. dairy cows)	calculated output per grazing livestock unit
Belgique	59	959 ECU
España	20	777 ECU
France	48	691 ECU
Ireland	31	345 ECU
Italy	19	1019 ECU
United Kingdom	98	374 ECU

Graph 3.9.

DRYSTOCK (TF42+43+44)

* insufficient sample prior to 1989/90

GRAPH 3.10 - PIGS AND/OR POULTRY FARMS.

This is numerically a very small group (only 1.4% of FADN farms) but important in its contribution to output (at 6.2%, this exceeds the "cereals" and "vineyards" groups and is equal with "other permanent crops"). By far the largest proportion of "pig and/or poultry" farms are in Spain (23%) followed by the Netherlands (15%) and France (14%). The Netherlands alone account for 21% of the output of these farms.

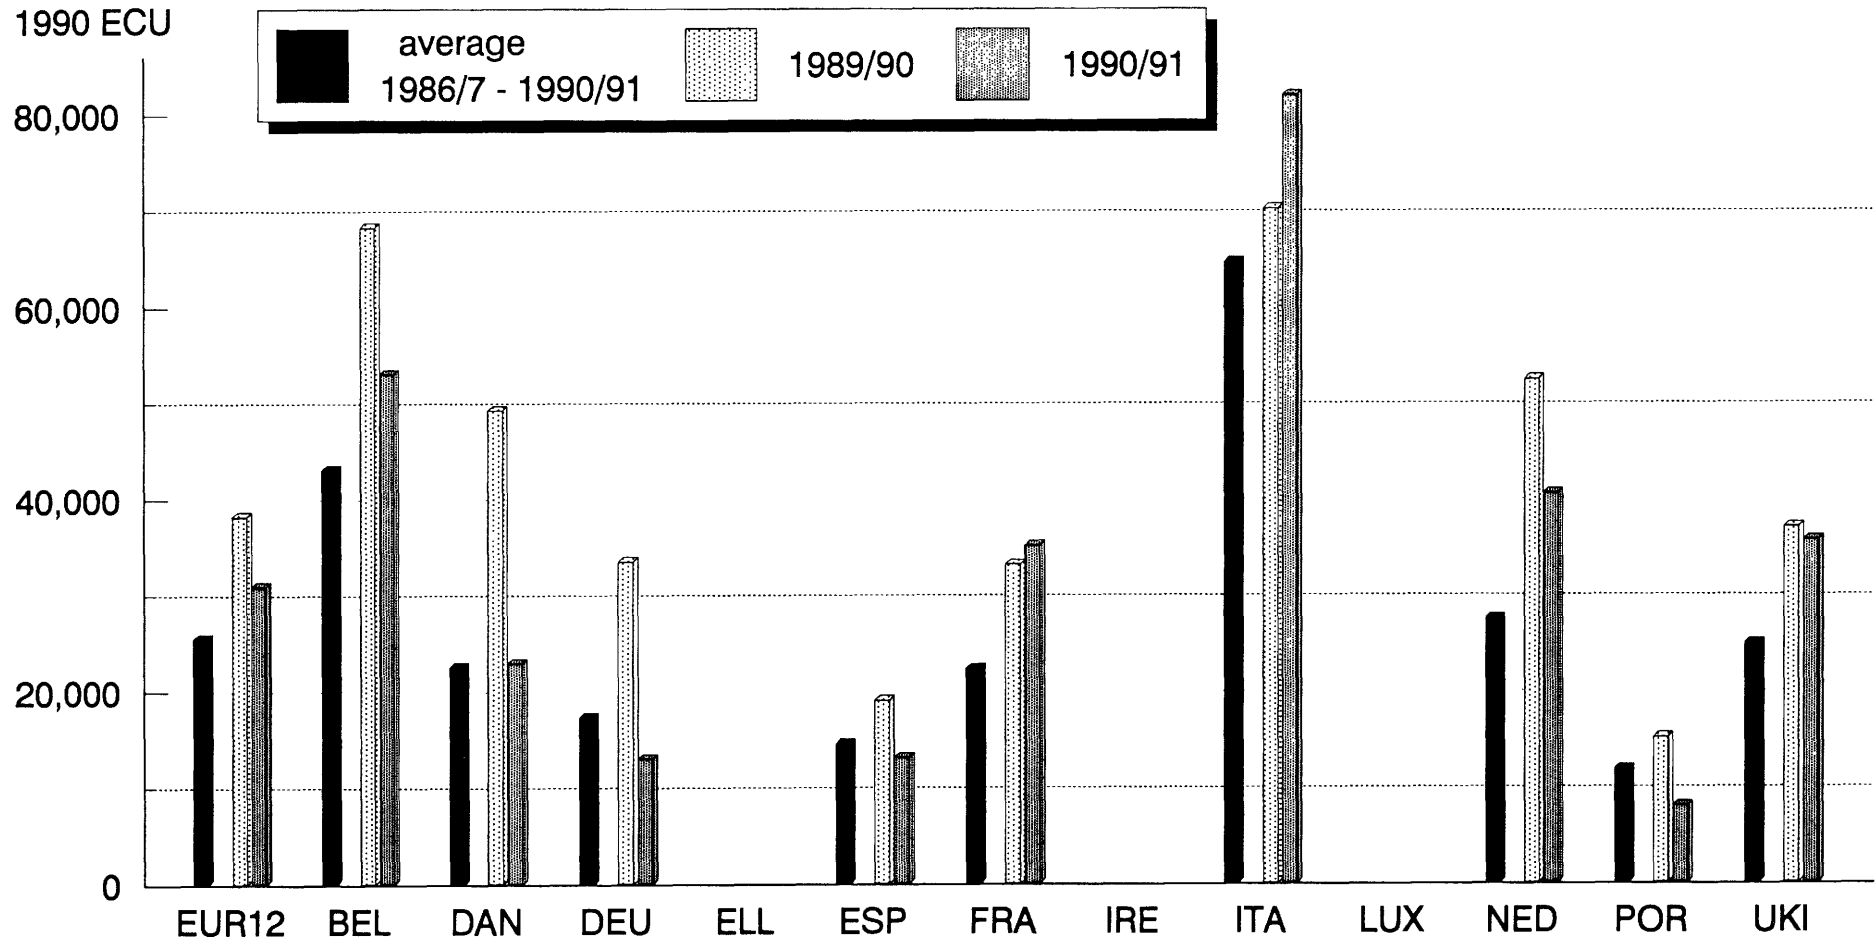

Over the period 1986/7 - 1990/91 Italian pigs/poultry farms earned almost 65000 ECU per annum and employed less than 2 persons. Across the Community, incomes (average of 1986/87 to 1990/91) decreased steadily to 11850 ECU in Portugal. The Community average, at 25050 ECU (for the same period), is more than double the average income of all FADN farms.

Selected indicators from the most important Member States in the "pigs and/or poultry" type of farming are given in the following table:

	pigs and poultry	total output	labour input	Family Farm Income
<i>[1989/90]</i>	<i>LIVESTOCK UNITS</i>	<i>000 ECU</i>	<i>ANNUAL WORK UNITS</i>	<i>ECU [AVE. 86/87-90/91]</i>
España	133	115	1.4	14576
Nederland	245	250	1.4	27537
France	250	198	1.7	22357
U.K.	353	316	3.2	24912
Danmark	201	264	1.6	22538
Belgium	209	213	1.3	43115

Graph 3.10.

PIGS and/or POULTRY (TF50)**

C:\BB90\b90pp.WK3 pp.ch1

GRAPH 3.11 - MIXED FARMS.

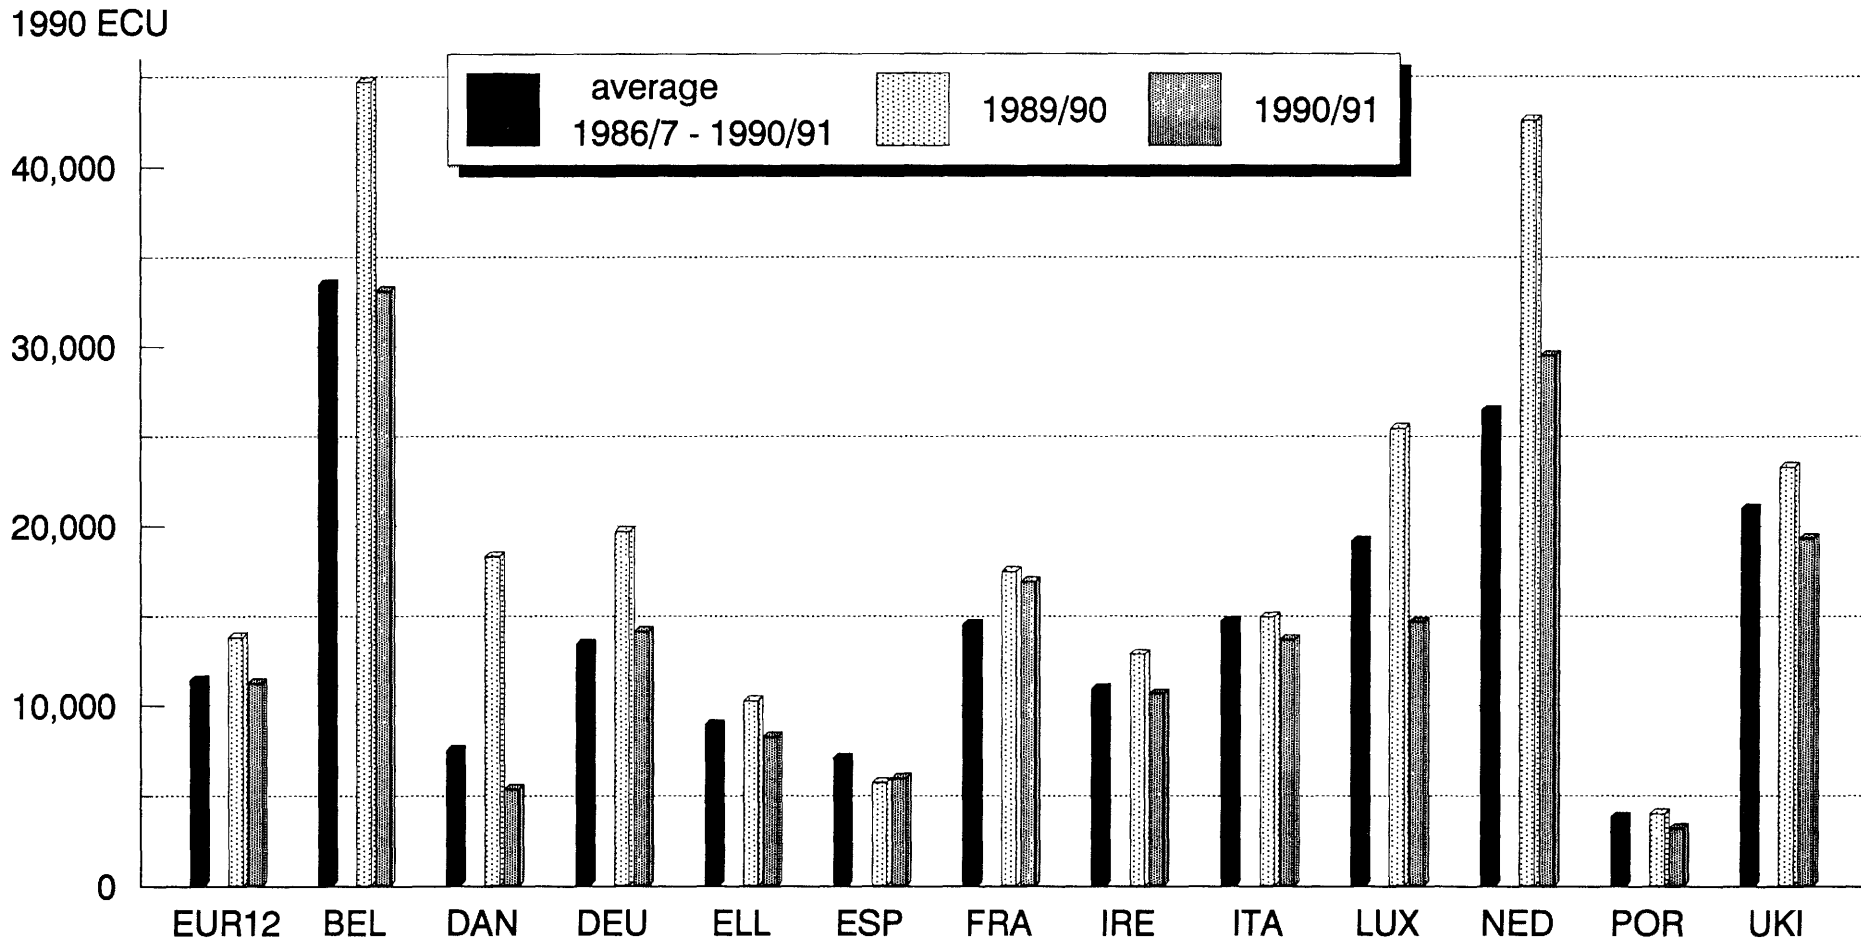

This is a very heterogeneous group of farms from all climatic regions and with a variety of production activities. The table below gives an indication of the activities of these farms in five Member States (values are averages per farm):

	economic size of farm	arable crops	forage crops	permanent crops	dairy cows	other. cattle	sheep and/or goats	pigs and/or poultry
<i>[1989/90]</i>	ESU	ha	ha	ha	LU	LU	LU	LU
Deutschland	33	18	12	0.0	10	13	0	34
España	10	9	7	0.8	4	2	5	11
France	40	22	27	0.4	13	21	3	23
Italy	16	6	7	0.9	4	6	2	2
Portugal	4	2	5	1.0	1	2	1	0

Mixed farms are numerically most important in Portugal (21%), Italy (20%) and Germany (18% of the Community total). For production they are particularly important in Germany which has 30% of the Community output of these farms. Over 1986/7 - 1990/91 average incomes ranged from just under 3850 ECU in Portugal (on 10 hectares) to 33500 ECU in Belgium (on 27 hectares). However the labour input was higher in Portugal (1.8 annual work units) than in Belgium (1.6).

Graph 3.11.

**REAL INCOME per FARM (FFI) by TYPE of FARMING
MIXED (TF71 + 72 + 81 + 82)**

GRAPHS 3.12 AND 3.13 - INCOMES PER PERSON.

The graph shows incomes (Family Farm Income) calculated per person (in this case annual work units of unpaid labour) by dividing the farm income result by the corresponding labour input (annual work units of unpaid labour, which approximates to family labour). For the Community the average income per person (1986/7 - 1990/91) was 9000 ECU compared to 11900 ECU per farm.

GRAPH 3.12 - INCOMES PER PERSON BY TYPE OF FARMING.

Comparison with graph 3.2 (page 27) reveals more or less the same *ranking* of the type of farming groups, but with the relative incomes of specialist cereal farms up and those of horticulture farms down.

GRAPH 3.13 - INCOME PER PERSON BY ECONOMIC SIZE OF FARM.

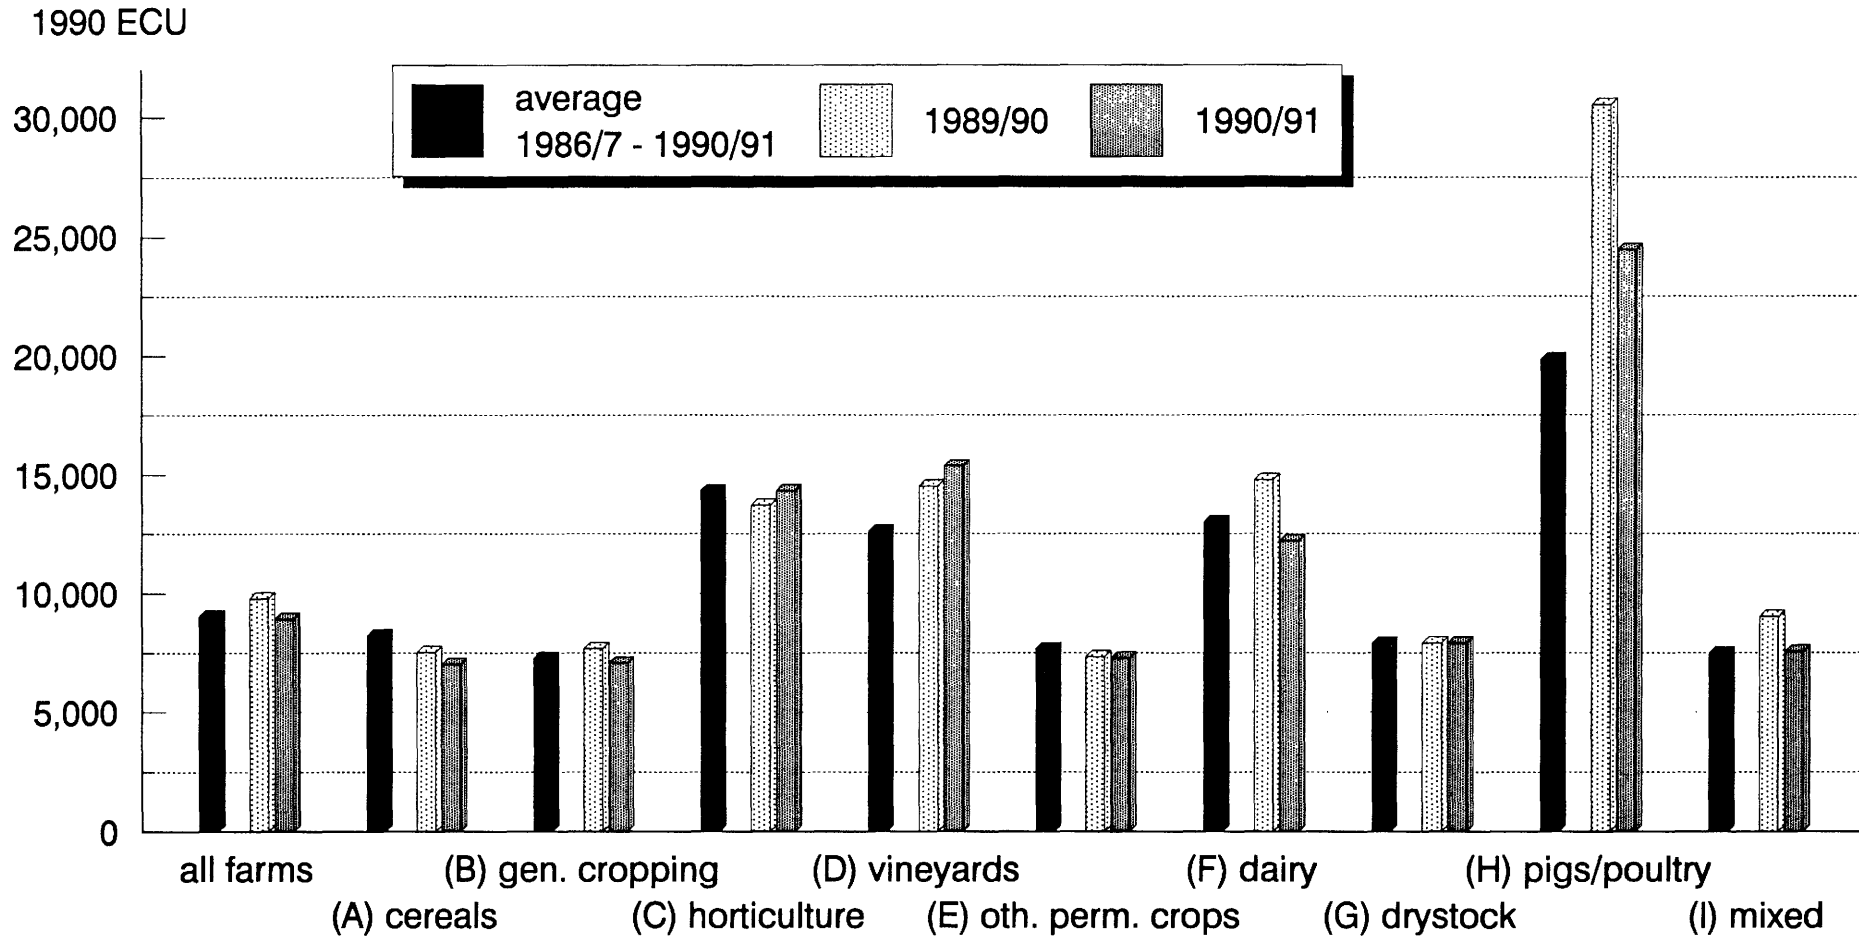

Farms are classified according to economic size, which is roughly equivalent to the gross value added of the farm (for more precision see section 5.2, pages 205 and 210). The columns represent the income per person in each group. They show that incomes are much higher, the larger the farm. "Very large" farms show earnings per person about 4 times the "all farms" average and about twelve times that of the "very small" farms.

It is important to refer to the distribution according to the different Member States in each of the economic size groups (table 5.4, page 210). In the very small group over one third (37%) of the farms are Italian, and one quarter Portuguese (in fact several Member States have so few farms in these groups that they are not sampled at all for FADN). In the "very large" group 30% of farms are in the U.K., 26% in France and 15% in Italy (1990/91 results).

1990 ECU

***SUMMARY RESULTS - 1986/87 to 1990/91,
by type of farming group, in 1990 ECU.***

On the following pages average results are given for each type of farming, in ECU at 1990 values.

Where there are no or very few (<6) farms in a farm type group, no results are shown.
Group averages calculated on small samples (6 to 30 farms) are shown in italics.

Method.

Results for Member States in national currency have been deflated, using the factors given below, then converted to ECU at 1990/91 (FADN) rates of exchange (see section 5.5).

TABLE 3.1

4. TABLES OF DETAILED RESULTS FOR 1990/91.

Tables 4.1 to 4.4 include results for either the complete set of FADN variables ("level 1") or a reduced set ("level 2") for the Community (EUR12) and Member States. Apart from the sample and population (farms represented) statistics, all results are weighted averages. Sample results are weighted and raised to group averages using a population from the EUROSTAT Farm Structure Survey 1987 classified along the Community Typology. For an explanation of the weighting system see section 5.3, and for the Typology, section 5.2.

4.1. RESULTS BY TYPE OF FARMING (LEVEL 1). PAGES 72 TO 123.

Results are given for the 9 type of farming groups, (A) to (I), used by FADN. These are combinations of the 17 principal types of farming of the Community Farm Typology¹. A description of the type of farming groups, including the average shares of the different enterprises found on these farms, is given in section 5.2 (table 5.1).

The complete results list ("level 1") is given.

The importance of each of the type of farming groups in the Community is shown in table . (section 5.3), both in terms of farms and agricultural output.

The shares of each type of farming group in Member States are described by table 5.2.

4.2. RESULTS BY ECONOMIC SIZE OF FARM ("LEVEL 1") PAGES 124 TO 175.

Farms are grouped into 6 economic size classes. Economic Size of farm is a standardised farm gross margin, equal to the sum of the component gross margins (standardised) of the crop and livestock items of the farm (see section 5.2). The units are European Size Units (ESU). In these tables 1 ESU is equal to 1200 ECU.

Due to the different Member States thresholds of the minimum size of farm included in the FADN field of survey, results for the smaller size classes ("very small", "small" and "medium low") cannot be given for several Member States. Care should be taken especially when using EUR12 results for the small size classes as results will refer to only a limited number of Member States.

¹ as defined in Decision 85/377/EEC (see section 6.2).

Due to the very small number of "very large" farms in Greece, there are no results for this group.

For the United Kingdom, results for the "small" farms refer to Northern Ireland only, as this region has a lower size threshold for the FADN field of survey, corresponding to the different farm structure there relative to that of Great Britain.

4.3. RESULTS BY AREA OF FARM ("LEVEL 2") PAGES 176 TO 188.

Results are given for 6 classes of Utilised Agricultural Area (UAA). *The types of farming groups (C) Horticulture and (H) Pigs/Poultry*, which are highly land intensive, *are excluded throughout* to avoid the inclusion of both intensive and extensive farms in the small area classes. Because of the fairly close correlation between farm area and economic size, the caution relating to the FADN thresholds and small farms mentioned in 4.2 above still applies.

4.4. RESULTS ACCORDING TO INCOME PER PERSON ("LEVEL 2") PAGES 189 TO 201.

Results are given for 7 classes of income (Family Farm Income) per person (Annual Work Unit of unpaid labour) in steps of 4000 ECU. An explanation of Family Farm Income can be found in section 5.1. Note that the distribution refers to income per person and *not per farm*, i.e. refers to a calculated per capita income of farmers and farm workers who are not paid employees.

5. METHODOLOGY AND DEFINITIONS.

5.1 INCOME INDICATORS

The derivation of the main indicators (Gross Farm Income, Farm Net Value Added and Family Farm Income) from the components of the farm account (output and inputs) is shown in 3 dimensional form in Graph 5.1. The volumes are to scale for the average of all farms in the FADN. Cash Flow is treated separately below.

Indicators of personal income are also used (Farm Net Value Added per Annual Work Unit and Family Farm Income per Annual Work Unit of unpaid labour). The Annual Work Units are explained below.

CASH FLOW.

This is shown diagrammatically, in the same way as for the income indicators, in Graph 5.2. The "+" rectangles represent the receipts side and the "-" rectangles the costs side for indicators. The main differences in calculating Cash Flow rather than Family Farm Income are the deduction of net investment costs (i.e. real costs) rather than a calculated depreciation charge for capital items, inclusion of the change in the borrowing situation of the farm and exclusion of the treatment of stocks.

BALANCE SHEET.

This is shown diagrammatically in Graph 5.3. Net Worth is equal to farm assets less liabilities. Assets are grouped into fixed and current, breeding livestock being considered as a fixed assets item in the accounts. The diagram is in proportion to the average result over all FADN farms.

ANNUAL WORK UNITS.

This represents the work done by one full-time worker in one year. Part-time and seasonal work are included in the calculation. The sub-group "Annual Work Units of unpaid labour" or "FWU" is used to represent the labour input of farmers and their families as, for example, in the indicator "Family Farm Income per person". For more details of the definition see "An A-Z of Methodology" referred to in section 6.1, page 218.

5.2 TYPES OF FARMING AND ECONOMIC SIZE OF FARM.

TYPES OF FARMING.

Farms are designated as belonging to a type of farming according to the shares of different crop and livestock enterprises on the farm. The sizes of the individual enterprises are measured in ECU of gross margin (= gross value added). The gross margins used are average values for a region, known as "standard gross margins" (SGM). Throughout this booklet average values for 1983 - 1985 (referred to as "1984") have been used.

The key to the types of farming, known as the farm "typology" - i.e. the proportions of the different enterprises which determine the classification - is given in Decision 85/377/EEC (see section 6.2). The observed shares of the different farm enterprises in each type of farming group in the FADN, in terms of total output, are shown in table 5.2.

The 9 type of farming groups (A) to (I) presented in this booklet are combinations of the 17 "principal types of farming" defined in the Community farm typology in the above decision. The correspondance of the principal types of farming and type of farming groups are shown in tables 5.1 and 5.2.

The proportion of all FADN farms which fall into each type of farming group, and their contribution to the output of all FADN farms, are shown in graph 5.4.

The distribution of all farms and all output of each type of farming group, at Community level, is given in table 5.2.

The distribution of the main agricultural products between the different types of farming is shown in table 5.3.

ECONOMIC SIZE OF FARM AND EUROPEAN SIZE UNIT. (SEE ALSO 4.2).

The sum of the standard gross margins (see above) for all of the crop and livestock enterprises of the farm determines the economic size of the farm. The unit of measurement is the European Size Unit (ESU), which, for use with the "1984" standard gross margins, is equal to 1200 ECU of standard gross margin.

Six economic size classes are used in this presentation. The class boundaries and labels, together with the distribution of farms in each class in the community, are shown in table 5.4.

For more details see "An A-Z of Methodology" referred to in section 6.1, page 218.

5.3 WEIGHTING AND RAISING OF RESULTS.

SELECTION OF THE SAMPLE.

For the 1989/90 FADN accounting year a little under 59500 farms were selected from a population (the FADN field of survey) of 4,85 million farms as surveyed in the 1987 EUROSTAT Farm Structure Survey. This gives an overall sampling rate of 1,2%. Selection is made on 3 criteria: FADN region, type of farming (according to the Community farm typology) and economic size of farm. Application of these criteria gives a sampling and classification grid, common to both FADN sample and results.

SAMPLE RAISING AND FARMS REPRESENTED

The FADN sample is raised for each cell of the classification grid by a weight equal to the ratio of population size to the sample number. The weights are summed for the desired classification total (e.g. for a type of farming in a Member State) to give the "farms represented". As some of the cells in the classification grid are not sampled, due to lack of sample farms or the fineness of the classification grid, the "farms represented" may be less than the "field of survey" for a region, type of farming or size class.

WEIGHTING OF RESULTS

Mean results for groups of classification cells (for instance average total output per farm for a type of farming in a region) are weighted using the weighting factors mentioned above. The population (the Farm Structure Survey) must be classified on the same basis as the FADN sample (the same typology, regions and standard gross margins), which explains the need to use the 1987 Community Farm Structure for Member States even when a more recent national agricultural structural survey or census is available. For this reason ***weighted FADN results from national farm accounts surveys may give results different to those of the Community FADN.***

More precise information on farm selection and weighting in FADN is available in the booklet "Farm Accountancy Data Network: An A to Z of Methodology" (see section 6.1).

Section / Table 5.5 Average annual exchange rates applied to FADN

This table shows the annual exchange rates used in FADN for the accounting years indicated. When the accounting year differs from the calendar year, a weighted annual rate calculated from the 12 monthly rates for the period is applied.

Member State and accounting period	1981/82	1982/83	1983/84	1984/85	1985/86	1986/87	1987/88	1988/89	1989/90	1990/91

Eastern Europe and the USSR

THE CHALLENGE OF FREEDOM

GILES MERRITT

The sparks of unrest that leapt from Berlin in November 1989 to Moscow's Red Square in August 1991 are firing an explosion of political and economic change. Out of the ashes of Communism is emerging the shape of a vast new European market-place stretching from the Atlantic to the Pacific.

In his fascinating account of Europe's fast-changing East-West relationships, Giles Merritt argues that a massive rescue operation must be mounted to ensure the success of these changes. The upheaval of Communism's collapse is 'The challenge of freedom'.

Written with the cooperation and support of the European Commission, this book sets out to identify the key policy areas where a new partnership is being forged between the countries of Eastern and Western Europe. It offers a privileged insight into the current thinking of European

Community officials, politicians and industrial leaders, and analyses the factors that will determine whether the emerging market economies of Eastern Europe can truly be absorbed into a single European economy.

Immensely readable and often disturbing, this important book contains much up-to-date and hitherto unpublished information on such major East-West problem areas as energy, environmental control, immigration, trade relations, agriculture and investment. It also examines the arguments surrounding a 'Marshall Plan' for Eastern Europe that would emulate the famous US aid programme that helped relaunch the economies of Western Europe in the aftermath of World War II.

For anyone concerned about the future of Eastern Europe and the USSR, whether from a political, social or economic standpoint, this book is essential reading.

Bulletin of the European Communities

The *Bulletin of the European Communities*, which is issued 10 times a year (monthly, except for the January/February and July/August double issues), is an official reference publication covering all spheres of Community activity.

It is compact, easy to consult (with an index and copious references to the Official Journal and to previous issues), logically structured (to reflect the main fields of Community policy) and wholly reliable. The Bulletin is an essential reference tool, describing the passage of Community legislation through all its stages from presentation of a proposal by the Commission to final enactment by the Council.

Thanks to its topical commentaries on the month's major events, it provides the student of European integration and other interested readers with up-to-date and accurate information about the most recent developments in Community policy — the creation of a single market, economic and social integration, the Community's role in international affairs, etc.

Supplements to the Bulletin are published from time to time, containing important background material on significant issues of the day. Recent Supplements have covered German unification, the Commission's programme for 1992 and European industrial policy for the 1990s.

The Bulletin and its Supplements are produced by the Secretariat-General of the Commission, 200 rue de la Loi, B-1049 Brussels, in the nine official languages of the Community, and can be ordered from the Community sales agents.

INFO92

The Community database focusing on the objectives and the social dimension of the single market

As a practical guide to the single market, INFO92 contains vital information for all those determined to be ready for 1992.

INFO92 is really a simple market scoreboard, recording the state of play on the stage-by-stage progress of Commission proposals up to their adoption by the Council, summarizing each notable development and placing it in context, and keeping track of the transposition of directives into Member States' national legislation.

Using INFO92 is simplicity itself. It can be consulted on-screen by means of a wide range of everyday equipment connected to specialized data-relay networks. Fast transmission, the virtually instant updating facility (several times a day, if necessary) and dialogue procedures requiring no prior training make INFO92 ideal for the general public as well as for business circles and the professions.

The system offers easy access to information thanks to the choice of menus available and to the logical presentation modelled on the structure of the *White Paper*, the *Social Charter* and the decision-making process within the institutions.

Enquiries may also be made to the Commission Offices in the Member States or – for small businesses – the Euro-Info Centres now open in all regions of the Community.

DIRECTORY

OF COMMUNITY LEGISLATION IN FORCE and other acts of the Community institutions

The Community's legal system is of direct concern to the individual citizen as much as to the Member States themselves.

Both lawyers and non-lawyers, then, need to be familiar not just with national law, but also with Community legislation, which is implemented, applied or interpreted by national law and in some cases takes precedence over it.

To make Community legislation more accessible to the public, the Commission of the European Communities publishes a Directory, updated twice a year, covering:

- binding instruments of secondary legislation arising out of the Treaties establishing the three Communities (regulations, decisions, directives, etc.);
- other legislation (internal agreements, etc.);
- agreements between the Communities and non-member countries.

Each entry in the Directory gives the number and title of the instrument, together with a reference to the Official Journal in which it is to be found. Any amending instruments are also indicated, with the appropriate references in each case.

The legislation is classified by subject matter. Instruments classifiable in more than one subject area appear under each of the headings concerned.

The Directory proper (Vol. I) is accompanied by two indexes (Vol. II), one chronological by document number and the other alphabetical by keyword.

The Directory is available in the nine official languages of the Community.

EUROPEAN ECONOMY

European Economy appears four times a year, in March, May, July and November. It contains important reports and communications from the Commission to the Council and to Parliament on the economic situation and developments, as well as on the borrowing and lending activities of the Community. In addition, *European Economy* presents reports and studies on problems concerning economic policy.

Two supplements accompany the main periodical:

- Series A – ‘Economic trends’ appears monthly except in August and describes with the aid of tables and graphs the most recent trends of industrial production, consumer prices, unemployment, the balance of trade, exchange rates, and other indicators. This supplement also presents the Commission staff’s macroeconomic forecasts and Commission communications to the Council on economic policy.
- Series B – ‘Business and consumer survey results’ gives the main results of opinion surveys of industrial chief executives (orders, stocks, production outlook, etc.) and of consumers (economic and financial situation and outlook, etc.) in the Community, and other business cycle indicators. It also appears monthly, with the exception of August.

Unless otherwise indicated, the texts are published under the responsibility of the Directorate-General for Economic and Financial Affairs of the Commission of the European Communities, 200 rue de la Loi, B-1049 Brussels, to which enquiries other than those related to sales and subscriptions should be addressed.

Subscription terms are shown on the back cover and the addresses of the sales offices are shown on the third page of the cover.

Success in business

**depends on the decisions you make ...
which depend on the information you receive**

Make sure that your decisions are based on information that is accurate and complete!

In a period of rapid adjustment, with national economies merging into a single European economy under the impetus of 1992, reliable information on the performance of specialized industry sectors is essential to suppliers, customers, bankers and policymakers.

Small and medium-sized enterprises, in particular, need easy access to information.

The market must be defined, measured and recorded. Information is needed on production capacities, bottlenecks, future developments, etc.

SOCIAL EUROPE

Social Europe, published by the Commission of the European Communities, Directorate-General for Employment, Industrial Relations and Social Affairs (DG V), Coordination and Information Policy Unit, deals with current social affairs in Europe.

The basic review appears three times a year. In addition, a number of supplements/files are published annually, each dealing in depth with a given subject.

ENERGY

A CHALLENGE FOR EUROPE AND THE WORLD

Since it first appeared in 1985 **Energy in Europe** has become recognized as an invaluable source of information on both the policy-making and the operational aspects of European Community energy policy. Subscribers include leaders of energy-consuming and energy-producing industries and other decision-makers in the private and public sectors, as well as major consultancies and research institutes in and outside the Community.

In the present situation within the Community, itself at the eve of the single market, and *vis-à-vis* the huge energy problems, as well as the potential, of our neighbours in Central and Eastern Europe and in the Commonwealth of Independent States, the energy sector is of the greatest strategic importance. An understanding of it is indispensable in many areas of economic activity. It also constitutes a crucial factor within a debate of truly global importance, namely the protection of the environment, including the global warming issue.

Energy in Europe continues to keep its readers abreast of the ongoing situation as regards overall policy, markets, energy planning, and the constant quest for cleaner and more efficient energy technology.

Market trends and perspectives are covered in **two regular issues** each year, and also in a **Short-term energy outlook** appearing in the first half of the year and an **Annual energy review** at the end of the year which includes the world energy situation by region including EC Member States, the short-term energy outlook for the Community, and a review of trends in main indicators over 10 years. Further **Special Issues** are also produced in connection with major developments or events, including international conferences on or relevant to the energy sector.

Energy in Europe appears in English but each issue also contains translations into French, German or Spanish of articles from the preceding issue.
