FINAL DRAFT (2 APRIL 2008)

JOINT ANNUAL REPORT FOR 2007

1. UPDATE OF THE POLITICAL, ECONOMIC AND SOCIAL SITUATION

1.1 Update on the political situation

Political Democratic Governance - 2007 was an interesting year for Papua New Guinea (PNG), since it was the year of National Election and the Preferential System of Voting^a was for the first time used nation-wide with minimal violence compared to previous elections. It was indeed a real test for the Integrity of Political Party Bill^b and resulted with a smooth formation of government compared to previous years. In addition, relative to the history of political instability and uncertainty, the political environment was stable in advance of parliamentary elections in 2007, with the Prime Minister completing a full five-year term - the first time for any government since independence. Political stability was a result of the Organic Law on the Integrity of Political Parties and Candidates which was enacted in 2001.

With a stable political situation, the national election was held in July 2007 and proceeded more smoothly than previous elections. A new coalition was formed, with the National Alliance Party led by Prime Minister Sir Michael Somare returning to office for a second term. The number of women candidates increased^c compared to the previous elections. There is a very active Ombudsman Commission, but additional resources are needed in order to increase the performance of its constitutional duties.

Although, the Limited Preferential Voting (LPV) system was new to all, it has proven very effective and worked well in the 2007 election. For instance, most people agree it lessoned pre polling and polling violence amongst candidates and created a more collaborative campaigning environment, and many women felt they did get a chance to vote more fairly. Regardless of only one women being reelected to the parliament, it was encouraging to observe that the LPV has enabled an increase^d in women candidates contesting for this election compared to the previous elections. In any case, the Organic Law on Provincial & Local Level Government provides for participation by women in decision making at the lower levels of government.

^a Preferential voting requires voters to vote for candidates in order of their preferences. This enables candidates to seek support from outside their own clans and communities, while ensuring that elected MPs held a majority mandate from the people of their electorates. This is in accordance with the Organic Law on National and Local-Level Government Elections [1997 as amended to 2006], and associated regulations;

^b A law that guides the behaviour of political parties and candidates to avoid political horse-trading and to ensure political stability

^c 2007 Election Assessment Report, Commonwealth PIF Assessment Team

^d On average five (5) women candidates contested seats in each of the 20 Provinces, including the NCD. Out of the total 101 women candidates, 45 stood for seats in the southern region, including the NCD (Central 9, Gulf 5, Milne Bay Province 9, NCD 6, Northern Province 10 and Western Province 6). The Highlands region recorded 26 women candidates compared to 22 women in Mamose and eight in the New Guinea Islands (Source: 2007 Election Assessment Report, Commonwealth PIF Assessment Team).

Although some legislative changes took effect in a very short period of time that affected election planning, electoral officials managed it^e. After the completion of the 2007 national general elections, a total of 52 national election petitions were filed in the registry of national court challenging the results of a number of seats being contested. Out of the 55 petitions three have been dismissed and only 52 accounted for. All election petitions have gone through direction hearings and are currently on the pre-trial conference.

With regard to the human rights' and fundamental freedoms' situation, PNG has a relatively good records with an independent judiciary and free press. The Government has passed the legislation in 2006 and has created and funded a Human Rights Commission in 2007.

Government Effectiveness - Despite some important changes in decentralization including an increase in government funding, the executive arm of government remained generally weak in terms of delivering services to the people. This is not to say that all districts are weak, there are some exceptional districts performing well such as Rabaul and Kokopo districts in East New Britain. As a result of the above, politicians were under pressure from their voters to deliver services thus resulting in a situation where they become legislators and implementers. The issue of greater autonomy & better representations has been aired several times during 2007 with the government indicating that it would surely look into these areas, especially in regard to establishing new electoral boundaries and creating new electorates since population has increased and people feel that they are not being fairly represented thus resulting in less or very little service delivery. A few provincial governments have even proposed to have similar autonomy as Bougainville and this has been presented in parliament on several occasions.

Internal Security - Although, in general, the Peace and Security has been observed to be quite good in PNG, there are key concerns of violent criminal activities, especially in some urban centres of Port Moresby, Lae and Mount Hagen. In this respect, the situation in 2007 has not improved compared to the previous year, and some reports even indicate that there has been a general deterioration. The urban criminal activities stem from an increasing level of unemployed youth living in poor urban areas as well as from the disintegration of the traditional forms of social control. In addition, certain parts of the Highlands region continued to have tribal fights with some areas declared war zones. This has contributed to an increase in movements of people to peaceful areas especially in the coastal areas which may have some potential negative effects. The government has realised this priority issue and has created a Law & Justice Sector Coordination Mechanism where the different arms of the government in the sector meet and coordinate their efforts to reduce crime especially in regard to complaints, arrests, court trials and correctional services. This mechanism seems to work as a result of improved communication^f. Budget allocation has also been increased by K214.3 million where

^e Election News, PNG Electoral Commission, November 2007

f MTDS Performance Management Framework, 2007 Pocketbook

K75 million (from the windfall revenue) was for priority rehabilitation of infrastructure^g.

The *Bougainville situation* was normal with the implementation of the most important provision of the comprehensive peace settlement agreement between GoPNG and Bougainvillean authorities in 2005 and the election of an Autonomous Bougainville Government. The Bougainville Economy has improved significantly and is deemed to be once again ahead of the provincial economies. The question of a referendum on independence is several years away. However, the 'No Go Zone' still exists and there are arms still being held there. There was a group of Ex-Fijian Soldiers training an illegal army on the basis of a promise of being paid huge amount of money by a cult leader. These Fijians have surrendered to the government after learning that they will never be paid. The chiefs in that area and the Bougainville Autonomous Government are gradually paving the way towards peace and normalcy in the area.

Regional Institutional Context - At the regional front; relations with GoPNG and the Australian Government was at its lowest during the first three quarters of 2007 as a result of the "Julian Moti affairh" which was subject to widespread public comments, including the PM's role in the affair. However, it seems now that the relationships with the new Labour Australian government led by Prime Minister Kevin Rudd seem to be positive.

It was also in 2007 that the new head office of the Melanesian Spearhead Group was opened in Vanuatu. This did not go down well with the other small pacific island nations since they see this as disintegration into smaller groupings of the pacific island nations. This sentiment was expressed in Tonga during the Forum Leaders Meeting in October 2007. Finally, the recent social unrest in Solomon Islands and Military Coup in Fiji creates a perception amongst many developed states and investors that most of the pacific states are fragile.

From the regional perspective on trade, the signing/initialling of the EPA by Fiji and PNG whilst the rest of the islands nations were reluctant did not go down well with the Pacific Islands Forum Secretariat. When Fiji and PNG signed the interim arrangements despite strong advice, it had surely weakened the regional position. PNG and Fiji went ahead to conclude negotiations with the European Union (EU) since they felt that they might lose out on certain benefits they are currently enjoying if they did not sign. From the PIF Secretariat point of view, the intention was to negotiate with the EU at a regional level in order to increase Aid for development so that it can cater for the adjustment and development costs such as loss of revenue, employment, etc.

g 2007 Budget Volume 1

^h Julian Moti was the Attorney General of Solomon Islands who was accused of underage rape in Vanuatu by the Australians. He escaped from arrest with the assistance of PNG Government to Solomon Islands which soured the relations between PNG Australia & Solomon Islands

1.2 Update on the economic situation

Economic growth, accelerated further in 2007, is projected to continue in 2008. Global prices for key commodities softened from the high levels of 2006, but mining production recovered from the contraction of 2006 as a result of earlier investments and the exploitation of higher-grade ore bodies. This recovery offsetted an expected decline in oil and gas output resulting from depletion of the oil fields. Mineral production grew by about 7% in 2007. The forecast was not affected by the cancellation in early 2007 of a planned gas pipeline from the Southern Highlands to Australia, since this facility would not have had an impact on output for several years. Energy companies involved in the project have indicated willingness instead to consider developing the gas fields for liquefied natural gas exports and petrochemical production.

Mining investment stimulated construction, notably in the first year of building the Ramu Nickel Mine. The sector also benefited from public expenditure on infrastructure and strong private demand in a low interest rate environment. Construction grew by 10.0% in 2007 and is projected to further increase in 2008. Manufacturing, such as food and beverage processing, grew at a modest rate on the back of growth in consumer demand, which underpinned growth in areas like transport and communications. The agriculture, forestry, and fisheries sector grew by 3.6% in both 2006 and 2007 as cash crop production rose in response to new investments and transport infrastructure improvements, as forestry output expands when new project areas are developed, and as fisheries production maintains a steady rate of increase. Palm oil and log production have been the major contributors to growth in the sector. Non-mineral GDP grew by 4.2% in 2007 and is expected to further increase by 4.0% in 2008.

Inflation was kept low at 3.0%. Continued fiscal prudence and sound monetary management ensured exchange rate stability, and a move to a productivity-based wages policy was effective in containing supply-side pressures, because inflationary expectations fell in 3 years of relatively low inflation. The 2007 budget had a deficit of 0.2% of GDP, in accordance with objectives established in the Medium-Term Fiscal Strategy 2002-2007.

Pressures on the **budget** were expected in the lead-up to the elections, but responsible **fiscal management** was maintained. In 2008, a budget surplus of 1.2% is projected on the basis that revenues from the mineral sector will decline and that expenditures will be reduced accordingly. Public debt is expected to fall to 39.7% in 2008 as both domestic and external debt stocks come down from 2006 levels, which was as a direct result of the government's strict adherence to its public debt strategy. Continued fiscal prudence and exchange rate stability has permitted the central bank to maintain a neutral monetary policy stance, and interest rates were expected to be steady.

Softer prices for mineral exports and declining oil production are projected to reduce the current account surplus in 2007 and 2008. Moreover, imports for major mining projects will rise. The cancellation of the gas pipeline points to a smaller drop in the external surplus than earlier pencilled in, since the pipeline-associated high level of imports will no longer be required. The decline in the current account

surplus does not reflect excess demand pressures or structural imbalance. Imports arising from mining projects are fully funded by capital inflows related to private sector decisions to launch financially viable projects. Foreign reserves are forecast to provide over 9 months of import cover.

Corporate Income Tax receipts increased by K34.0 million (or 7.1 per cent) to K511.7 million in 2007, compared with K477.7 million estimated in 2006. The increase in corporate income tax reflected the solid economic conditions which resulted in the continued improvements in corporate profitability.

The **District Finance Office roll-out program** reached 42 districts. The November 2006 Supplementary Budget provided an additional K22 million to allow those district finance offices already opened to become fully functional. To support the continued roll-out of these offices at the district level, K30 million of the windfall gain was provided to meet the capital costs of establishing 10 new district finance offices in 2007 (that is, an initial capital cost of K3 million per office).

The **privatizations of State Enterprises** and allowing competitions have added many benefits especially in regard to no political interference. The Privatization of PNG Banking Corporation to Bank of South Pacific has seen its growth and expansion to Niue, Solomon Islands and Fiji in 2007. It is now a public company on the POM Stock Exchange. The NASFund and the Nambawan Super have also declared windfall dividends to its members as a result of independence and good business practices. The PNG Ports, Electricity Commission, Air Niugini, are yet to show their performanceⁱ.

In the **telecommunication sector**, there is now a rather fragile situation of competition after so many political interferences and according to public opinion; there are signs of improving services at affordable cost. The most controversial case concerns the relations between the state-owned company Telicom and the new entrant into the market - Digicel. Digicel was awarded a licence by PANGTEL^j to operate in the country but the Ministry of Communication & Public Enterprise indicated that the competitor cannot operate in the country since the issuance of the license did not comply with the ITC policy. This national court indicated otherwise. After several judgments always in favour of Digicel, the issue has been raised in the broader framework of the reform of the ITC policy at the Parliamentarian level, where the bill is still under discussion and some pending issues still need to be solved.

According to the 2007 budget, the government allocated substantial funding to some state enterprises. PNG Power and Telikom have been allocated K65 million and K35 million respectively of the windfall gain to assist them in extending their services to rural districts. In addition, the national airline, Air Niugini, is in the process of expanding its fleet of F-100 aircraft. K30 million of the windfall gain has been provided to allow it to complete this program.

¹ There are no real competition thus these entities are still operating as monopolies

^j Independent Regulatory and Licensing Authority for Information & Communication Industry

In 2007, the government approved the Framework for a Trade and Investment Strategy^k. This framework has two interrelated elements:

- International trade policy, by which is meant the negotiation of international trade agreements and liberalisation of tariffs, and
- Export promotion strategy by which is meant all the measure to promote export capacity. This includes investment policies and information on export markets.

From a **trade perspective**, apart from initialling an Interim Agreement in the framework of the EPA, PNG is also member of a range of regional trade arrangements: Melanesian Spearhead Group (MSG: PNG, Fiji, Vanuatu, Solomon Islands), PICTA (14 Pacific Islands), PACER (PICTA +Australia and NZ), APEC, and it has preferential access agreements with Australia and NZ. The initialling of the Interim Agreement, with the particular favourable rules of origin in the fishery sector, now enables competition and free access of certain goods in the EU. This situation has alarmed the key trade partners in the Pacific of PNG - Australia and New Zealand - who intend to revamp and speed up the negotiations in the framework of PACER.

1.3 Update on the poverty and social situation

Poverty has proven difficult to quantify in PNG due to lack of statistical data, especially in relation to subsistence and monetary incomes and lack of agreement on the definition of poverty in the PNG context. There has been a lack of surveys in the last few years to reflect possible changes in poverty given the rate of economic growth and substantial increase in government funding to the districts.

According to the 2006 UNDP Report, PNG's Human Development Index fell to 142 out of 177 countries and is one of the lowest countries in the South East Asia-Pacific region. It has lower average life expectancy, a higher infant mortality rate and lower rates of adult literacy than most countries in the region. The availability of basic data on social and health conditions in the country is very poor with little data created in 2005 and 2006. A table of available data under the MDG Indicators is attached in Annex I. The government has adopted some realistic but ambitious targets in the Medium Term Development Strategy (MTDS), which relate to the expected increase in income generation in rural areas that can sustain improved social services.

Thus Government priorities are aimed at improving social services in rural areas, raising rural incomes and strengthening provincial and district governments. These are laid down in the MTDS, where seven key priority areas have been defined including education and health, transport infrastructure and boosting rural incomes and employment. It is worth mentioning that in 2007 the government took the lead in investment compared to previous years where donors provided more funding. When all Government expenditure is taken into account, the Government is the

^k A Trade & Investment Strategy is intended to be prepared under the 9th EDF Trade Related Assistance Project

lead financier in six out of the seven Expenditure Priorities Areas under the MTDS. It is envisaged that the trend towards greater Government leadership in terms of financing will coincide with the Government taking greater responsibility for service delivery in each of the MTDS priority areas.

Based on the MTDS and the National Education Plan 2005-2014, the main strategy and reform for **education** is an emphasis on basic education, as well as strengthening adult and technical education. The government and all the donors have been and are continuing to support efforts to achieve targets relating to universal primary education and to elimination of gender disparities, as well as to supporting infrastructure facilities in secondary and tertiary education and testing new approaches to vocational education, whilst also focussing on quality through upgrading teachers, supply of books and teaching materials.

The funding for the education sector increased from K15.7 million from 2006 to K30.4 million in 2007. A further K200 million was made available in 2007 for priority education infrastructure rehabilitation.

According to the MTDS Performance Management Framework, there are some improvements in the education indicators, whilst there are disappointing results /indicators related to health. The Government has been supporting educational improvements since 1990 and very good progress has been made in the main education indicators, especially towards enrolment and retention targets for universal primary education, as well as gender ratios in secondary/tertiary levels. Thus the reforms over the last decade have resulted in a large increase in total enrolments in the national education system, a dramatic growth in elementary education enrolment and significant increases in teachers and numbers of schools. However, government recognises that major challenges remain including difficulties in financing core functions, providing provincial capacity in educational services provision, difficulties faced by many parents in affording school fees despite subsidisation, concerns over quality due to the rapid expansion in the educational system, insufficient infrastructure and teachers and lack of capacity to monitor and administrate educational reforms.

The health sector budget relating to primary and preventive health and HIV & AIDS increased and the government took the lead in investment compared to previous years where donors provided more funding. When all Government expenditure was taken into account, the Government is the lead financier except for the HIV & AIDS where donors are the lead funders. It is envisaged that the trend towards greater Government leadership in terms of financing will coincide with the Government taking greater responsibility for service delivery in this priority sector. The overall sector plan is guided by the overall National Health Plan 2001-2010 and its strategy for health in the Strategic Plan for the PNG Health Sector 2006-2008. In 2007 the total development budget allocated to the health sector was K141.3^m million with the focus on the MDS indicators and targets.

¹ From K30.8 million in 2006 to K57.5 million in 2007

^m K110 million from the two supplementary budgets (wind fall revenue) was made available for Priority Health Infrastructure

Previous available data pointed to deterioration in health indicators such as immunization and infant mortality rates and the increasing prevalence rates of HIV/AIDS, malaria, TB, pneumonia, diarrhoea, measles and meningitis. According to the MTDS Performance Management Frameworkⁿ, there are some very slight improvements due to increased funding by government over the last few years. Performance in the health statistics is poor is as a result of poor access to healthcare professionals as well as facilities. Effective health care requires sound management and efficient use of resources. On average, health centres find themselves short of key drug supplies for five months of each year. On average, only 21% of the funds intended for healthcare reach the health centres. The trend will improve if the government enhances its health service delivery system.

According to the recent reports^o available, as of the end of December 2006, a cumulative total of 18,484 people have been diagnosed with HIV infection; 8530 (46%) infections were in males, 8824 (48%) in females, and 1130 or 6% of infections were in individuals whose sex was not reported. HIV has been diagnosed from every province, with 61% percent of all HIV infections reported from NCD, 17% from the Western Highland Province, 6% from Morobe, 4% from the Eastern Highlands Province, and the remaining 12% distributed across all other provinces^p.

Water borne diseases are common in rural areas where access to improved clean water supplies in rural areas is low. It is estimated that in rural areas, only 9% have access to piped water and 70% use raw untreated water. As a result, the government has also increased funding especially at the district level and the EU has come in a big way with Euro 25 million and AusAID under it Community Development Scheme focusing on rural communities water supply systems. This will surely assist government in improving the current situation.

Violent crime against women^q is a concern making them vulnerable to HIV infection. Although, there are adequate laws relating to violence against women, the problem still remains due to ineffective implementation. During 2006 and 2007, there have been a lot of public out cry against such behaviours and the police and the community are now improving by taking matters to court rather than out of court settlements. The government has indicated its commitment and taken a number of legal steps to stem violence against women Continued improvements in the status of women in PNG are being achieved through the educational system through improved women retention rates in secondary schools and the increase in the number of women engaging in tertiary and vocational training..

ⁿ See page 7 of the MTDS PMF

^{° 2007} Estimation Report, National Aids Council Secretariat

^p These are concrete statistics as a result of the establishment of Voluntary Counseling & Testing Facilities in most of the districts throughout PNG. People normally come for testing when they see and feel the symptoms rather than testing to be safe thus statistic does not reflect those with the virus.

^q Various Media Reports in 2007

Urban drift is a major concern due to the limited social and economic opportunities in rural areas and has resulted in the proliferation of squatter settlements in the urban centres. Tribal warfare in the highlands region is a major factor which pushes migration into coastal urban centres.

2. OVERVIEW OF PAST AND ONGOING CO-OPERATION

The focal sectors of the 8th EDF were Education, Training and Human Resources Development, and Rural Development/Environment while those of 9th EDF are Education, Training and Human Resources Development, and Rural Water Supply and Sanitation with a large non-focal sector programme on Institutional Capacity Building and Governance. 2007 was the year where nearly all the 8th EDF focal sector programmes came to the end of implementation thus requiring a formal closure process. Despite being decentralised direct labour operations where the government have to take responsibility, most of 8th EDF projects were managed by technical assistance with full responsibility for project implementation. At the end of their service contracts, this responsibility were simply handed over or dumped to the respective departments without any additional support. In many cases, the funds were badly managed and recovery orders could be issued to the Government which in reality had no practical responsibility during implementation.

A lot of challenges were encountered during the closure process where many files were not in order with supporting documents and proper procurement procedures not being adhered to. In regard to the two remaining 8th EDF projects, there were very low disbursements, as a result of many opened commitments. No Programme Estimates were signed for the Rural Coastal Fisheries Development and Improvement to Rural Primary Education Facility projects.

The issues and concerns experienced in the projects and programmes under implementation or recently completed are related to non-adherence to and/or ignorance of established procedures and processes by responsible managers/supervisors and their accounting officers. It can also be argued that there are also capacity problems within the NAO Support Unit as well as the EC-Delegation, which had contributed to limited oversight and control leading to such problems and time-consuming efforts to resolve them.

The impact of these focal sector programmes as foreseen in the intervention frameworks cannot at present be established with any degree of certainty because of some delays encountered in activities, formulations or appraisals, but there have been some outcomes and more will become visible in the course of 2008. The construction and rehabilitation of educational facilities under the 8th EDF have been completed and there is a noticeable increase in student enrolments in secondary schools and tertiary institutions. Other good examples with impact on rural population are from STABEX funds. With research from Stabex funds, cocoa farmers now have a hybrid which yields in 9 months, coffee farmers can earn more due to improved quality, alternate cash crops are available for farmers and it has contributed to the Bougainvillean people and its economy as a result of the cocoa rehabilitation and related skills training thus contributing to increased production and income. The 50 M€ Sysmin programme is already attracting and increasing

mining exploration in the country with its updated digital and online geological information and small scale miners will surely benefit from the training and equipment that will enable them to increase their production safely.

The 9th EDF strategy is directed at strengthening education and improving the quality of rural life, and at fostering good governance. Programmes under 9th EDF are fewer and typically larger than those under 8th EDF. The two major 9th EDF projects were under implementation with varying results with the Rural Water Supply & Sanitation Programme achieving some results whilst the Education, Training & Human Resources Development Program receiving no results at all due to various deficiencies and views from all concerned. Since the TAs started over a year and half ago, no programme estimate has been approved and endorsed thus no implementation.

The government by and large is on schedule in maintaining its policy commitments under the 9th EDF- maintaining the share of education in the national budget (around 15% of GDP), financing the recurrent expenditure, facilitating regular dialogue with major donors on education and encouraging community and non-state actors' participation.

Rural development projects under 8th EDF had a focus on improving cash income, while the priority of the 9th EDF is on the well being of rural people. The introduction of non-state actors as implementing agents, and the inclusion of governance as a key issue to development in 9th EDF and 10th EDF, is significant shifts of emphasis, which followed from the evaluation of 8th EDF. The 10th EDF is focusing on Rural Economic Development and Education, Training & Human Resource Development with Governance & Institutional Capacity Building as a cross-cutting issue. The Country Strategy Paper and the National Indicative Programme for the 10th EDF have been finalised and accepted. After evaluation of the incentive tranche, the European Commission agreed to increase the total amount of the A envelope from the initially requested 108 million Euros to 130 million Euros.

The Country Strategy Paper and National Indicative Plan for the 10th EDF were signed on 18th October 2007 and Euro 142.5 Million have been allocated for the development of PNG for the period 2008-2013.

3. POLICY COHERENCE FOR DEVELOPMENT (PCD)

The EC's development policies and strategies have always been consistent with PNG's three key objectives at the top of the Programme for Recovery and Development: good governance; Export driven growth; and rural development, poverty reduction and empowerment through human resources development. These objectives are intended to be achieved through a number of key priority areas, which are transport infrastructure rehabilitation and maintenance; promotion of income earning opportunities including agriculture research extension and marketing, the nucleus agro-estate model, revitalisation of the Rural Development Bank, micro-credit, skills training and establishment of industrial parks; basic education; development-oriented informal adult education; primary healthcare; HIV/AIDs prevention, and Law and Justice.

Out of the 12 policy areas, the following ones are of relevance to PNG:

Trade: There were capacity constraints in terms of human resources, communication and other institutional aspects within the Department of Trade & Industry. The mid-year shift of responsibilities in the field of international trade to the Department of Foreign Affairs, Trade and Immigration, did not bring more clarity. By 2007, there was no National Trade Strategy in place but only a Trade and Investment Strategy Framework which was approved by the government. Sectoral studies were not done in order to prepare for a national position which can be presented at the regional EPA Ministerial and technical meetings. From the government's perspective, trade is a MTDS priority which calls for export led economic growth. Coordination of all the public and private sector economic actors were difficult which resulted in some sectors such as fisheries opting for a Bilateral Trade Agreement approach with the EU.

In 2006 and early 2007, at the request of the Department of Trade & Industry, the EU financed under the 9th EDF a technical assistance project under Technical Cooperation Facility to assist the Department of Trade & Industry in building up its institutional capacity to effectively prepare for and participate in the Economic Partnership Agreement as a country and the region. Almost simultaneously, a long term Trade Related Assistance Project was being prepared under the 9th EDF to assist with the mainstreaming trade matters in development strategies and sector strategies, benefiting more from international trade and participating effectively in multinational and regional trading arrangements. The 10th EDF has also allocated some funds for the trade sector and the definition of the program is yet to be done. The focal sector of rural economic development and skills training are focussed on increasing production for domestic consumption as well as export according to international standards.

Environment & Climate Change: At the political level, the Prime Minister Grand Chief Sir Michael Somare was personally interested and taking the lead in advocating and mobilising support in environment, climate change and carbon trading at the national, regional and global arenas. As such, the government has established an Office for Climate Change to specifically focus on the implementation of the Kyoto Protocol.

The EU has been in the forefront on environmental issues and has taken the agenda on board in its involvement accordingly, in line with the 2007 Communication on the Global Climate Change Alliance. The EU programme in PNG has been focusing on Environmental sustainability mostly through conservation, and sustainable use of natural resources (Agriculture, Forestry & Fisheries). As such, the 8th, 9th EDF took into account sustainable use of natural resources with programmes in forestry, fisheries and agriculture where resource owners are involved in harvesting their resources for income and self consumption. The EU was supporting the resource owners from sustainable harvesting & production and linking the resource owners to markets. All the other EDF projects and programmes had environment as cross cutting issue and that the EU had not ventured into any environmentally unfriendly programme. The 10th EDF Rural Economic Development will surely look into environmental & natural resource governance and carbon trading within the context of climate change.

Employment & Decent Work: The Government focus has been focusing on creating employment in its various huge public investment programme created employment/jobs for many Papua New Guineans. This notable improvement in employment growth is due to stronger economic growth, which reflects a more conducive investment climate, sound macroeconomic policy and increased expenditure on improving and maintaining public infrastructure. Employment grew in retail, building and construction, agriculture, forestry and fisheries sectors. Urban unemployment remains high due to a huge influx of unskilled workers looking for educational and job opportunities^r. Informal sector employs the majority of the people and the Department of Community Development has various strategies and policies to support its growth. Allowing competition in the communication sector, despite the problems mentioned in chapter 1.2, has also enabled an European firm to invest, whereby contributing in the increase in employment in the urban centres.

Support from the EU in this regard relate to the education and skills training it supports (under its Education, Training & HRD Programmes) where the training is targeted towards/and on the basis of the market demand or available resources in the community for self employment. In addition, projects such as forestry, fisheries, agriculture and mining support looks at avenues to provide maximum self - employment to the rural population. The current Mining Sector Support Program which has a focus at the small scale alluvial miners with the provision of training and micro-finance to this targeted population is a good example. One of the focal sectors, the Rural Economic Development under the 10th EDF Country Strategy and the National Indicative Program RED will surely stimulate economic growth and employment in the districts throughout PNG.

Energy: In February 2007, the Government established a new entity called Petromin, to manage the PNG Government's stake in resources operations. Under PNG law, the state is entitled to a stake in all mining and petroleum projects—30% and 22.5%. The newly established government enterprise Petromin has taken the lead in developing LNG projects, with the PNG Cabinet giving its approval to a joint

^r BPNG QEB, September 2007

venture with Italian energy giant ENI to build an LNG plant in PNG. Add to this InterOil's recent commencement of a second exploratory well in its Elk field in Gulf Province, and the potential of its Antelope field, plus the foundation of PNG LNG (its new joint venture with partners Merrill Lynch and Clarion Finance), and it looks certain that LNG will start to play a much more prominent role in the development of the country's resources sector.

And the PNG Government has approached the EIB and there were some discussions in the equity financing of the PNG Gas Pipeline Project which EIB expressed interest. PNG government will approach EIB in 2008 when other investors sign the deal. PNG has a good record with EIB when it financed the Yonki Hydro-electricity Plant which supplies electricity to the through-out highlands region and down to Madang & Morobe Provinces.

In addition to the above, the EU under its Energy Facility has had a visit to PNG in 2007 with the intention of supporting public and private sector organizations to prepare and submit project proposals on a competitive basis to access funding. No organizations in PNG was short-listed thus no funding. Other Pacific Island countries were eligible.

4. JOINT EUROPEAN UNION STRATEGY FOR THE PACIFIC

Strengthened Partnership: The EU is a significant player in the pacific region with Australia, New Zealand, and Japan with increasing presence of China. The EU's Development aid under the 10th EDF Regional Indicative Programme is likely to increase significantly compared to the 29 M€ allocated under the 9th EDF.

A Special Dialogue was held between the EU and the Pacific Islands Forum (PIF) in Nuku'alofa on 19 October 2007. The PIF delegation was led by the Forum Troika consisting of the Prime Minister of Tonga and Ministers from PNG and Niue, supported by the Secretary General of the Pacific Islands Forum Secretariat. The EU Delegation was led by Commissioner Louis Michel and Ambassador Antonio Mendes for the Portuguese Presidency. Representatives from the United Kingdom, Italy and France as well as Pacific Forum Countries also attended the meeting at Ministerial and senior officials' level. This Special Dialogue was the first high-level political meeting between the EU and the Pacific Island Forum. The Special Dialogue agreed to launch an enhanced EU - Pacific Islands Forum Political Dialogue. This will enable a structured interaction between the EU and the Pacific region to increase visibility of the EU in the Pacific and the Pacific in the EU. During the meeting it was agreed that a follow-up ministerial meeting will take place during the first quarter of 2008 prior to the Ministerial Meeting.

From a bilateral perspective EU-PNG, in 2007 the bases for the political dialogue according to Article 8 of the Cotonou Agreement were laid. The EC Delegation held regular meetings and discussions not only with the NAO, but also with the Prime Minister and its office, as well as with the Ministry of Foreign Affairs, Trade and Immigration.

More Focused Development Action: Along this perspective, the EU has aligned its development strategy to the Pacific Islands Development Strategy which focuses on good governance, regionalism and sustainable management of natural resources. Since PNG has a huge National Indicative Programme, the Regional Indicative Programme focuses and benefits more the smaller island pacific countries. This means that there is only synergy at the strategic and policy level and not the implementation or activity levels. However, in 2007, the B Envelopes from several Pacific Island States were mobilized for a Regional Disaster Risks Management Programme. The financing agreement was signed in October 2007 during the Forum Leaders meeting together with the Facilitating Agriculture Commodity Trade Project - a project intending to facilitate increased agricultural commodity trade in the pacific by working with selected enterprises in farming and forestry sectors.

The EU recognizes that the pacific island countries are particularly vulnerable to natural disasters, climatic change, environmental degradation and external economic shocks. For this reason the EU Member States and the Community support disaster prevention and preparedness in these countries, with a view to increasing their resilience in the face of these challenges. The aim of this project is to do exactly that. It will also maximize the close synergies with EU regional and national water sector support programmes.

Natural disasters are expected to become more frequent and intense through global warming. The EU has a leadership role in promoting international action to tackle climate change. In 2007, the European Commission has proposed to build a new alliance on climate change between the EU and developing countries. Through this alliance the EU and partner countries will work jointly to integrate climate change into poverty reduction strategies. Substantial resources will be provided by the EU for this purpose. The Alliance renews the commitment of the EU Action Plan on Climate Change and Development to systematically integrate climate change into development cooperation. Proof of this commitment is today's signing of the Disaster Risk Reduction Programme.

More Effective Delivery: In addition to the donor coordination and harmonisation activities taking place within PNG (see following chapter), at a regional level, given the geographic location of the countries of the region, donor coordination is a challenge especially amongst and between the pacific island countries. A good example of this challenge is the preparation for the EPA with the EU. Communication, coordination and logistics for meetings and dissemination of information was a frustration which is one of the main reasons why there was limited progress and preparation resulting in only Fiji and PNG initialing the Agreement in 2007. There are ineffective communication systems in terms exchanges of experiences amongst the pacific islands states for better and effective delivery of aid. The information regarding the implementation of regional indicative programmes does not normally reach concerned officials at the national levels for information and sound decisions. The above perspective is better at the EC-Delegations in the region.

In terms of effective aid delivery, the EU has concentrated one its focal areas under the RIP in human resource development and sustainable management of natural resources. At the national level, human resources development was maintained as a focal sector but the second focal sector sometimes varied to focus on national need and in most cases focuses income generation activities.

5. DONOR COORDINATION AND HARMONISATION

The Government's mandate in Aid Coordination is vested in the Department of National Planning & Monitoring. Since the signing of the Paris Declaration, the government has been in discussion and collaboration with all the donors undertaking major steps to localisation of the declaration. The Paris Declaration, to which PNG is party, is "designed to track changes and encourage progress at global level among countries and agencies that have agreed to this declaration.

In October 2006, the Department of National Planning & Monitoring hosted an Aid/Donor Coordination workshop which led to the signing of the Madang Road Map to localisation of the Paris Declaration. Several meetings were held in 2007 on a rotating chairmanship basis where activities were identified, decisions were made responsibilities divided and progress monitored on the basis of milestones.

Perhaps, the biggest milestone which the government achieved in 2007 is the finalisation and approval of the MTDS Performance Management Framework. This paved the way forward for the donors to clearly see whether their respective sector of concentration is progressing and if not identify why and how to progress and/or improve progress in the indicators.

With the principle of concentration, it has guided the EU's programming at the national and regional levels. This means selecting a limited number of priority areas of action, through the dialogue with partner countries, rather than spreading efforts in too many sectors. In this context the has been focusing on education, training and human resource development and rural development with non-focal areas in governance & institutional capacity building, human rights & rule of law and support to NSAs.

As a result of the above, progress was again presented and discussed during the 2007 Aid/Donor Coordination Worksop resulting in the signing of the Kavieng Declaration on Aid Effectiveness where all the donors signed commitments to undertake different actions in progressing the localization of the Paris Declaration in 2008. With the simplification of the Paris Declaration from the in Madang Action Plan, the Kavieng Declaration bring more realistic and concrete targets, indicators and plan of action and protocols for Missions to PNG and management of TA in PNG. The donors have agreed to work with the government in terms of aligning and harmonizing development aid into the government system.

With regard to SWAP, AusAID has been involved in sectoral approaches in the health and law and justice sectors which are more sector coordination since funding control and implementation decisions are still being control. Therefore, implementing the commitment and eventually the final agreements would be a real

challenge especially in regard to implementation of governance reforms procurement and financial management & information system. These are the challenges that both government and donors will continue to discuss and work on in 2008.

From the EU perspective, the NAO Support Unit has proposed a new delegated NAO System which is inline with the Paris Declaration. The proposal which has been submitted to the EC-Delegation in 2007 still remains to be further discussed between the NAO and HOD.

6. DIALOGUE IN COUNTRY WITH THE NSAS, LOCAL AUTHORITIES AND THE NATIONAL PARLIAMENTS

From 2008 onwards, under the 9th EDF, the EU will directly support improvement of governance and service delivery in PNG at local level as well as through strategic alliances with Non State Actors. The EU in PNG has substantial experience in working with NSAs within the context of service delivery through programmes such as The Rural Water Supply and Sanitation, Rural Coastal Fisheries Development Programme, the sustainable eco-forestry programme and various NSAs projects from budget lines such as support to advocacy for revision of the electoral system and various health projects and eco-tourism projects. These interactions with NSAs in PNG show a strong need for capacity building and increased knowledge on procedure and requirements for EC funding. Previously, there has been little progress in building bridges between the agendas of donors, civil society and government through round table meetings, despite the fact that there is a willingness to improve public participation, governance, and considerable interest in public sector reform generally. Opportunities also exist to cooperate with donors in supporting the role of NSAs in the decentralisation process at provincial and district levels.

The Consultative, Implementation and Monitoring Council (CIMC) chaired by the Minister of the DNP&RD and established some four years ago is another important avenue for coordinating and monitoring policy. The Council, comprising of highlevel representatives from the GoPNG, civil society and the private sector holds an annual forum in which it trashes out policy and development issues and then makes recommendations to the government. It also reviews major policy decisions implemented by the government in previous years. The formation of the Council stemmed from a perception that government was not getting enough advice from non-state actors, especially the private sector, and that this had affected the quality of governance. Even in cases where decisions were taken, not enough was being paid to coordinating the implementation of policies and that the GoPNG was failing to implement important decisions. The CIMC was therefore established to include non-state actors into the policymaking process and to assist the GoPNG develop and coordinate the implementation of policy. The Council continues to play an important role within the GoPNG and some of its recommendations have been taken on-board in the MTDS. There are, however, questions about the ability of the CIMC to coordinate as well as to monitor the implementation of policy given that it does not have the capacity to do so. Moreover, since it only recommends, its advice really depends on whether the government takes it seriously.

At the parliamentary level, the NAO of PNG is a politician who normally represents the government in the execution of decisions and agreements. It is a government requirement that all major decisions have to be endorsed by the National Executive Council and it is the NAO's responsibility to present a case and obtain a NEC decision before implementation can proceed. The NAO also briefs the NEC and in certain cases the parliament on progress and issues relating to implementation of the EDF programme in PNG.

7. Conclusions

Political stability, supported by strong economic growth, improved over recent years and PNG held its first general elections using the Limited Preferential Voting system. The same Government, which held power for a full term (2002-2007), was returned to office in August 2007. With enhanced political stability, the government has aimed at sustaining and growing the economy through removing impediments to growth and investment, and improving physical infrastructure. The Government has continued with its medium term strategies - the Medium-Term Fiscal Strategy, the Medium-Term Development Strategy and the Medium-Term Debt Strategy - which provided a coherent medium term policy framework, mapping out future plans and building on the gains achieved to date.

In 2007 the government took the lead in investment compared to previous years where donors provided more funding. When all Government expenditure is taken into account, the Government is the lead financier in six out of the seven Expenditure Priorities Areas under the MTDS. It is envisaged that the trend towards greater Government leadership in terms of financing will coincide with the Government taking greater responsibility for service delivery in each of the MTDS priority areas.

PNG's macroeconomic performance has improved in recent years. 2007 marked the fifth year in a row of economic growth, with growth at 5.4 percent. While economic growth was at its highest rate in over a decade, the challenge is of sustaining and further improving performance, as well as translating these gains into tangible benefits for the people. A strong and sustainable economic growth is also required to make a noticeable improvement in income per capita growth, given the population growth rate of 2.7 percent per annum. PNG has benefited from the favorable global economic conditions and high international commodity prices. The country has pursued prudent economic, financial and fiscal management which have together, resulted in improved consumer and investor confidence in the economy. Recently, the international credit rating agency, Standard and Poors upgraded its long-term foreign currency rating on PNG to B+ and long-term local currency rating to BB- thus the long-term growth prospects are also favorable. Inflation has remained low, with the outcome in 2006 of 2.6 percent on a year-on-year average. Interest rates also remained low by historical standards while the exchange rate has remained relatively stable, with a slight appreciation against the United States dollar, although it has depreciated against the Australian dollar over 2006 and 2007. Foreign exchange reserves continued to increase to historical levels. The Bank of PNG will continue to maintain the floating exchange

rate regime, with intervention only to smoothen out short-term exchange rate volatility.

Despite these achievements, the law and order situation as well as social challenges remain to be vigorously addressed. Criminality in a few urban centers remains high and service delivery. The HIV/AIDS pandemic represents a threat to the population, while public health and education facilities need improving, and transport infrastructure needs rehabilitating. The country continues to face the challenge of raising the efficiency of public utilities to provide vital services to businesses and the population at large. The Public Service Machinery needs to be revamped to effectively deliver basic goods and services to the people. Furthermore, PNG is a small, open and developing economy still faces several risks to the economic outlook. These risks include any of the following: down-turn in the global economy; fall in major export commodity prices; depreciation of our currency, especially against the Australian dollar; and natural disasters such as pests, frosts, floods, landslides, cyclones and volcanic eruptions.

The Government of PNG is making efforts to improve the delivery of public services, and is continuing with its reform agenda it started in 2003 under its broader public sector reform. The Public Expenditure Review and Rationalization process and implementation of its recommendations has had solid donor support including from the World Bank. The financial sector liberalization and reforms have contributed to reducing business impediments, enhance competition and supported private sector growth. Reform work is also continuing in the trade and the public utilities.

The EU has been concentrating on human resources development and rural socio-economic development under its 8th, 9th and now the 10th EDF. Governance, capacity building and trade have been the EU's non-focal areas. These sectors, being key elements for poverty alleviation, are clearly in line with the Poverty Reduction Strategy and with the Millennium Development Goals the EU endorses. In the 8thEDF, main focus was given to support in income generation and infrastructure investments in primary, secondary, technical/vocational and university with the aim of increasing access and gender equity. In the 9th EDF strategy, more emphasis is given at strengthening education and improving the quality of rural life. The introduction of non-state actors as implementing agents in the focal sectors including governance and support to non-state actors are significant shifts towards ownership and sustainability. The 10th EDF has a similar focus on Rural Economic Development and Education, Training & Human Resource Development with Governance & Institutional Capacity Building as a cross-cutting issue.

A lot of challenges were experienced in the projects and programmes under implementation or recently completed are related to non-adherence to and/or ignorance of established procedures and processes by responsible managers/supervisors and their accounting officers. It can be argued that there are capacity problems within the NAO Support Unit as well as the EC-Delegation, which had contributed to limited oversight and control leading to such problems and time-consuming efforts to resolve them.

Despite the challenges, there were significant impacts and outcomes which were more visible and will be visible in the course of 2008. The construction and rehabilitation of educational facilities under the 8th EDF have been completed and there is a noticeable increase in student enrolments in primary, secondary, vocational schools and tertiary institutions. Other good examples with impact on rural population are from STABEX funds. With research from Stabex funds, cocoa farmers now have a hybrid which yields in 9 months, coffee farmers can earn more due to improved quality, alternate cash crops are available for farmers and it has contributed to the Bougainvillean people and its economy as a result of the cocoa rehabilitation and related skills training thus contributing to increased production and income. The Euro 50 million Sysmin programme is already attracting and increasing mining exploration in the country with its updated digital and online geological information and small scale miners will surely benefit from the training and equipment that will enable them to increase their production safely.

The challenge with Donor coordination and harmonisation is improving at the strategy and programming stages where the government and donors do have a certain level of effective consultation. At these stages, strategies and programmes are well coordinated and complimentary. A lot has been done since the Madang Action Plan and further progress has been made with clear commitments at the Kavieng Declaration in regard to the localisation of the Paris Declaration on Aid Effectiveness.

Annex 2 Key MDG indicators

The data as required by the table as proposed is not available but PNG has tailored all global targets as well as most of the indicators associated with the MDGs to reflect the realities and priorities of the country. These tailored targets are an important component of the Government's response to the challenges the country is facing. These specific targets and indicators have been included as part of the country's Medium Term Development Strategy.

Considering PNG's development situation and progress made since 1990, the tailored national targets are still very demanding. PNG faces many challenges in achieving these targets, some of which are MDG specific whereas others affect the implementation of all MDGs, or more generally the achievement of all development goals in the country.

International Target	National Target	1990	1996	Recent date	Progress on National Target since 1996

Notes:

- This report contains contracts and invoices in status provisional, committed, decided and ongoing.
- Contracts in this report without a budget line mentioned have no forecast registered.
- Contracts without the analytical breakdown entered in CRIS will not appear in this report.
- Data in this report will have been refreshed the day before the 'Last Report Refresh' date mentioned at the bottom of the repo

Regional project with activities in Papua New Guinea

9 ACP - RPR 50

Water and Environment Sanitation Project in 3 provinces in PNG Amounts committed end 2007: €1,152,474

Questions on the EU Aid Effectiveness targets

Questions on the EU Aid Effectiveness targets

Note: FR version to follow

The Commission has to report its performance annually against the four EU targets on aid effectiveness. The data for this will be collected through the EAMR reporting system. You are therefore requested to complete the questions below with specific information as noted so that the current limited baseline we have can be updated and subsequently tracked annually. The information will also be important for you to exchange with your government colleagues, NGOs and with other donors, including MS.

Given the similarities between the Paris and the EU Targets, against the questions below reference is given to corresponding questions in the OECD survey. For specific definitions of terms please refer to the OECD/DAC "Definitions and Guidance", Section 5 of the 2006 Survey on Monitoring the Paris Declaration on Aid Effectiveness (link given below). Please follow the OECD definitions closely to ensure standardised reporting. For further clarification where necessary, footnotes have also been included. http://www.oecd.org/dataoecd/13/29/36306366.doc

	the indicator: [(Qd5+Qd6+Qd7+Qd9)/4] / Qd2	0%
Are there ar	ny significant initiatives to promote the use of country systems	s in your country? If

Are there any significant initiatives to promote the use of country systems in your country? If so, please provide a short description. If not, highlight key constraints (use additional page if needed)

Both the PNG government and the development partners agreed, with the Kavieng Declaration on Aid Effectiveness (a joint commitment localising the Paris Declaration, signed on 15.2.2008), to establish frameworks providing reliable assessments of the trustworthiness and usability of country systems and procedures, starting with public procurement and pub-

¹ In practise this will cover all disbursements to the government sector for which the Delegation is the sub-delegated authorising officer.

lic financial management. There are currently three mechanisms making use of diagnostic reviews (both the government and donors are part of them): a working group tasked with upgrading the national public procurement system in place, leading to periodical Country Procurement Assessment Reports; a group conducting the Public Expenditure and Financial Accountability assessment; and the Performance Management Framework for the Mid-Term Development Strategy. All these mechanisms aim at bringing the country systems it in line with internationally agreed standards.

EU target 2 with an incr	Provide all capacity building assistance through coordinate easing use of multi-donor arrangements ²	ed programmes
OECD ref: Q ^d 3	How much technical cooperation did you provide in FY 2007 (Total TC in EUR)?	EUR 6,357,925
Q ^d 4	How much technical cooperation did you provide through co-ordinated programmes in support of capacity development in FY 2007 (EUR)? (Please use definitions given in OECD guidance)	Nil
Definition of	the indicator: Q ^d 4 / Q ^d 3	0 %

Are there any significant initiatives to promote the use of coordinated programmes for technical cooperation in your country? If so, please provide a short description. If not, highlight key constraints.

Within the definition of uncoordinated programmes as TC not provided in the context of a SWAp, no EC funded TC is provided through coordinated programmes in PNG.

No immediately evident possibility of SWAp in the Rural Development Sector for the 10th EDF. However, a coordinated programme for rural economic development with the World Bank is being studied.

The Kavieng Declaration (see above) contains in one of its Annexes (Annex IV) a Protocol for mobilising and managing Technical Assistance, where the government and the donors have agreed to put in place some shared principles and operating guidelines to ensure the more effective use of Technical Assistance.

Shared principles: the government has agreed to exercise leadership over TA, the donors to align it to PNG development priorities and to use common arrangements and programme-based approaches. TA must be demand-driven, selected with the involvement of the authorities, aimed at building capacity of key agency staff, integrated into a broader programme and be cost-effective.

Operating guidelines: government and donors will carry out joint assessment of requirements and joint identification of capacity building needs and expertise; ToR must be clearly articulated; mutual assessment of TA in the country; PNG counterpart to the TA always provided.

² Despite the different wording the target is interpreted to correspond to Paris Declaration indicator 4. Please pay particular attention to the definition for the question Q^d4.

EU target 3	3: Avoid establishment of new project implementation units (F	PlUs).
OECD ref: Qd10	How many parallel project implementation units were funded by EC in FY 2007?	0
	How many integrated project implementation units were funded by EC in FY 2007?	6
	How many <u>new</u> parallel project implementation units were started with EC support in FY 2007?	0
	How many <u>new</u> integrated project implementation units were started with EC support in FY 2007?	0
Definition of port of the E	the indicator: Were new parallel PIUs started with the sup- EC?	No

Are there any significant initiatives to decrease the number of parallel PIUs in your country? If so, please provide a short description. If not, highlight key constraints.

The situation in PNG has not changed. The key constraint for a full abolishment of parallel PIUs is insufficient government capacity for project implementation and lack of managerial attention to EC funded programmes.

In discussions and agreement with the NAO, a number of DNAOs will be appointed in line departments in order to promote more direct managerial involvement from key supervising authorities.

Out of the six EDF funded projects operating in PNG, three make use of PIUs which correspond almost fully to the definition of "integrated PIU" provided by OECD (doc. 5 of the dossier 'Monitoring the Paris Declaration on Aid Effectiveness'), while they are accountable to both the EC and the country implementing agencies and the salary structure exceeds that of civil service personnel (NAO-SU, Sysmin, ETHRDP). In the three other cases of integrated PIUs (RWSSP, RCFDP and IRPEF) it is again the country implementing agencies which sets the terms of reference and appoints external staff but the PIU is created outside existing country institutional structures.

With the Kavieng Declaration (see above), the government and donors have agreed that, unless it has been mutually decided as necessary, donors will avoid creating new parallel structures.

EU target 4	: Reduce the number of uncoordinated n	nissions by 50%.

	/? If so, please provide a short description					
			· ··			

Uncoordinated missions do not appear to be the most pressing problem in PNG and little attention has been paid to reduce their number. With the foreseen work on SWAp in the education sector, greater use of coordinated missions could be foreseen.

Annex III of the Kavieng Declaration (see above) contains a Protocol for mounting development partner missions to PNG, putting in place share principles and operating guidelines to ensure the more effective conduct of incoming missions.

Shared principles: timing and objectives will be communicated to the government reasonably in advance, allowing the latter to support the mission appropriately; donors will reduce the number of separate, duplicative missions.

Operating guidelines: ToR clearly articulated and in line with government priorities, composition of mission appropriate for the aims, monthly update of the Matrix of Missions; etc.

³ This question applies to the missions from the HQ

Other aid effectiveness related information (Optional)

Road map

(i) Have the EU missions in your beneficiary country implemented the Council request to prepare an EU road map guiding the implementation of Paris Declaration? If not, briefly explain what the causes of non-implementation of such request are.

France and the UK are the only MS present in PNG and both have quite an insignificant cooperation with the country in terms of bilateral disbursement of development aid. They do not participate in the donor coordination mechanism, but are regularly informed by the EC Delegation. There are no cases of delegated co-operation.

(ii) Who is in the charge of this work and are other stakeholders participating?

The GoPNG –Development partner Co-ordination is the body tasked with the responsibility of localising the Paris declaration and implementing it. The body is co-chaired by the Ministry of Planning and Monitoring and AusAid, and groups all donors in the country.

(iii) How is the road map being followed? What is the extent of the Government involvement on the Road Map, and more generally in the implementation of the Paris Declaration objectives?

The above body meets regularly and adopts strategic documents at 'annual summits'. In 2005, in Goroka, the first summit did not produce major results, while the second one in Madang in 2006 had shown a real will from the side of the GoPNG to progress on the implementation of the Paris Declaration. The summit in Kavieng, which was supposed to take place end 2007 and took instead place in February 2008, has been successful in demonstrating that the partnership between donors and the GoPNG has reached maturity, but failed in showing a commitment at political (ministerial) level. The Kavieng Declaration (attached document) constitutes an excellent road-map in localising the Paris Declaration, and identifying monitorable targets based on specific indicators – based on those of the Paris Declaration.

Blue Book

(i) Is there a 'Blue Book' tracking the donor activities at the national level?

Yes

(ii) Who is in charge of this work and is it actively updated?

The GoPNG – Development partner Co-ordination body.

Web site

(i) Is there a country website on donor coordination, harmonization or on aid effectiveness issues?

No

(ii) Who is managing the website and is it actively updated?

n.a.

(iii) Please provide the URL of this site.

n.a.

Papua New Guinea

Donor Activity Matrix

Donor Coordination

While respecting the particular objectives and conditionalities from each donor, the Government of Papua New Guinea (PNG) has succeeded in 2007 to steer the individual donor interventions towards its own Medium Term Development Strategy (MTDS).

The tables below show clearly the major intervention sectors for each donor for supporting achievement of the 7 main MTDS goals. Australia remains the main donor in the health sector, but in 2007 the PNG government increased significantly its support to HIV/AIDS prevention. Education still remains dependent on foreign donors for its investment budget. However, as a result of the windfall revenue from increased commodity prices, the government has allocated K200 million for investment in priority education infrastructures. It should also be noted that the whole recurrent budget is fully funded by the government, which is also substantial. During the first year of the budget, under the 9th EDF, the EU's contribution to the development budget became equal to the Australian one. Each of them funded 40% whilst the governmental intervention was 10%. Transport rehabilitation and maintenance is mainly funded by the Government through own funding and loans. The Australian Aid intervenes for 34% of the budget. In 2007, the Australian Aid budgeted a very important support in law order and good governance which became their main interventions in the Development Budget.

It has to be noted that in supporting income earning opportunities, the EU is the major donor. Up to now, the main origins of that funding are the 8th EDF- projects under implementation. In the 9th EDF, support to income generation was not included and the budget in this regard will decrease significantly. In the same range of ideas, the support to Development oriented adult education is very poorly funded. Nevertheless, these two interventions are the two major areas which could have a quick economic responds with related income generation, absolute condition for the enhancement of the livelihood of the rural population. To overturn this situation, the Government decided during the year 2007 for significant increases in support to Districts initiatives. In parallel, the negotiations for definition of the 10th EDF-NIP concluded in orientation of the main focal sector towards support to the rural economic development at district level supported through vocational and adult training of education, the second focal sector. To facilitate this reorientation the 9th EDF non focal sectors of support to good governance and to Non State Actors were reoriented towards support at District level to facilitate the implementation of the 10th EDF funding.

Total	1687	711	976	1885	763	1285	12%	7%	32%

⁽¹⁾Concerns not necessarilly MDTS related funding such as General Government Admin reform and events, Aid administration and not directly MDTS related projects

⁽²⁾ EU contribution is calculated on the basis of the forecasts of committments foreseen for 2007 in 2006. The amount under 'primary and preventive health' includes the project 'rural water and sanitation support', while the amount under 'income generating opportunities' includes the mining project and the stabex fundings.

Donor Support

By funding 42% of the development budget - approximately the same amount as the one allocated by the Government - the **Australian Aid** is by large the main external donor supporting the MTDS. The Australian Development Cooperation Strategy is based on a genuine partnership between PNG and Australia, driven by PNG ownership and leadership with a strong emphasis on sustainability and capacity building. The objective of the Australian Aid is to reduce poverty and promote sustainable development through support for the PNG Government's efforts to implement its MTDS and Medium Term Fiscal Strategy (MTFS), with a specific focus on four core areas: i) improved governance and nation building, ii)sustainable broad-based economic growth and increased productivity iii) Improved service delivery and stability iv) strengthened, coordinated and effective response to the HIV/AIDS epidemic.

The Asian Development Bank (ADB) assists Papua New Guinea in achieving its MTDS goals through loans and technical assistance focusing on i) strengthening governance through support in fiscal and financial management and public service reform, ii) supporting private sector development, through improvement of sector policy and institutional frameworks, mainly in the agriculture and fishery sectors, enhancement of productivity factors (skills development and microfinance services), and improvement of market access (selected transport infrastructure investments, especially in rural areas and iii) improving social conditions through support in health policy development and in water and sanitation infrastructure investments. Through its Asian Development Fund (ADF) grant facility, ADB helps addressing the growing HIV/AIDS pandemic in PNG.

Japan finances several programmes in selected fields such as bridge building for roads constructed with the assistance of other donors, long distance learning through radio and TV broadcasting, and specific rice development and water and sanitation projects. Through loans, Japan supports the Structural Adjustment Programme, the Trans Island Highway and a Rural Bank credit facility.

Major loans having been suspended for governance reasons, hence the **World Bank** has a limited portfolio in PNG. Smaller loans are still operational for road maintenance and rehabilitation, funding of a post volcano eruption rehabilitation and institutional strengthening of the Mining sector. Recent negotiations let presage resuming of WB support which would mainly be oriented in i) infrastructure (roads, maritime, air) ii) private sector development iii) integrated community based development iv) sustainable natural resource management; and good governance through capacity building of key government agencies.

The **People's Republic of China** has increased its cooperation with Papua New Guinea, which is mainly directed to agriculture and infrastructure projects.

New Zealand supports the Governmental strategy with primary focus on primary health care, basic education and good governance.

The different agencies of the **United Nations** mainly support the Government in achieving its medium term goals through institutional capacity building, planning and management by supporting ad-hoc departments and institutions. Moreover, UNDP supports a large HIV/Aids programme.
