£56 m GRANTS TO UK UNDER REGIONAL FUND

Attached is a list of the projects in respect of which grants have been approved in the current allocation under the 1978 budget of the Regional Fund. This latest tranche, of £56m (83m EUA), will be paid to the United Kingdom Government in step with national expenditure on the projects concerned. This brings Regional Fund grants to the UK this year to £100 million (151 million EUA) and the total since the Fund began in 1975 to £250 million (386 million EUA).

As far as industrial projects are concerned, the Community grants now announced represent a Fund contribution of up to half the cost of the assistance given to individual projects by the United Kingdom Government. European Regional Development Fund grants are not paid to the companies concerned in addition to the assistance they receive from the Government because it is not the purpose of the Fund to enable the individual investor systematically to get an additional grant from the Community over and above what he would have received from the Government in any case. If that were to be done generally, it would simply mean that the same number of investments was undertaken but selected individual companies each got more.

The main objective of the Fund is rather to enable a larger volume of regional industrial development, and associated investment in infrastructure, to take place than would have been possible if the Government had had to rely on national resources alone.

The Community grants towards infrastructure projects are passed on in full to the local and other public authorities concerned, thus reducing the amount they have to borrow to finance the investment in question.

This allocation of grants brings total ERFD grants this year throughout the EEC to 562m EUA.
