<p>Press releases: Eurostat publishes around 100 press releases every year in connection with the release of new data. The press releases include the key figures on the EU, the Member States and their partners. They are provided free of charge. They are also available on the Internet as soon as they are published: www.europa.eu.int/comm/eurostat/</p>					Paper Html PDF
<p>Statistics in focus: This collection is published regularly by Eurostat and provides up-to-date summaries of the main results of statistical surveys, studies and analyses. It covers all themes and consists of about four to eight pages per issue. Eurostat issues around 150 <i>Statistics in Focus</i> per year. Available as single copies or on subscription.</p>					Paper PDF
<p>Pocketbooks: This collection provides the main indicators on a theme or sub-theme in an easy-to-carry booklet of up to 100 pages. Available as single copies or on subscription.</p>					Paper Html
<p>Panorama of the European Union: This collection highlights the features and trends of a multi-sectoral theme or a sectoral sub-theme. The publications consist of around 200 pages and include analysis as well as tables and graphs. Available as single copies or on subscription.</p>					Paper CD-ROM
<p>Methods and nomenclatures are intended for specialists who want to consult the methodologies and nomenclatures used for a theme, a sub-theme or a sector. Available as single copies.</p>					Paper CD-ROM
<p>Detailed tables are intended for specialists. They present part, or all, of the statistical data compiled on a theme, sub-theme or sector. Available as single copies or on subscription.</p>					Paper CD-ROM
<p>Studies and research summarise the results of European statistical studies and research and are intended for specialists. Available as single copies or on subscription.</p>					Paper CD-ROM
<p>Catalogues provide rapid access to concise information on Eurostat's products and services. They are free of charge and include the <i>Mini guide</i>, a selection of Eurostat products and services, and <i>Statistical references</i>, the quarterly newsletter on Eurostat's latest products and services.</p>					Paper

..... Immediate access to harmonized statistical data

Eurostat Data Shops:

A personalised data retrieval service

In order to provide the greatest possible number of people with access to high-quality statistical information, Eurostat has developed an extensive network of Data Shops (!).

Data Shops provide a wide range of **tailor-made services**:

- ★ immediate information searches undertaken by a team of experts in European statistics;
- ★ rapid and personalised response that takes account of the specified search requirements and intended use;
- ★ a choice of data carrier depending on the type of information required.

Information can be requested by phone, mail, fax or e-mail.

(!) See list of Eurostat Data Shops at the end of the publication.

Internet:

Essentials on Community statistical news

- ★ Euro indicators: more than 100 indicators on the euro-zone; harmonized, comparable, and free of charge;
- ★ About Eurostat: what it does and how it works;
- ★ Products and databases: a detailed description of what Eurostat has to offer;
- ★ Indicators on the European Union: convergence criteria; euro yield curve and further main indicators on the European Union at your disposal;
- ★ Press releases: direct access to all Eurostat press releases.

For further information, visit us on the Internet at: www.europa.eu.int/comm/eurostat/

A great deal of additional information on the European Union is available on the Internet. It can be accessed through the Europa server (<http://europa.eu.int>).

Cataloguing data can be found at the end of this publication.

Eurostat is the Statistical Office of the European Communities. Its task is to provide the European Union with statistics at a European level, that allow comparisons to be made between countries and regions. Eurostat consolidates and harmonizes the data collected by the Member States.

To ensure that the vast quantity of accessible data is made widely available, and to help each user make proper use of the information, Eurostat has set up a publications and services programme.

This programme makes a clear distinction between general and specialist users and particular collections have been developed for these different groups. The collections *Press releases*, *Statistics in focus*, *Panorama of the European Union*, *Key indicators* and *Catalogues* are aimed at general users. They give immediate key information through analyses, tables, graphs and maps.

The collections *Methods and nomenclatures*, *Detailed tables* and *Studies and research* suit the needs of the specialist who is prepared to spend more time analysing and using very detailed information and tables.

All Eurostat products are disseminated through the Data Shop network or the sales agents of the Office for Official Publications of the European Communities. Data Shops are available in 12 of the 15 Member States as well as in Switzerland, Norway and the United States. They provide a wide range of services from simple database extracts to tailor-made investigations. The information is provided on paper and/or in electronic form via e-mail, on diskette or CD-ROM.

As part of the new programme Eurostat has developed its website. It includes a broad range of on-line information on Eurostat products and services, newsletters, catalogues, on-line publications as well as indicators on the euro-zone.

FOREWORD

Did you know that in 2000, the European Union's external current deficit expanded markedly in comparison to the previous year?

Did you know that Japan has a steady external current surplus while the USA has a persistent deficit?

Did you know that the USA is the main EU trade partner?

Did you know that the EU is a net exporter of services to Japan?

Did you know that the EU is a net importer of Royalties and license fees and Audiovisual services from the USA?

This publication provides you with the most recent and comparable statistics of the EU, the euro-zone, Norway, the USA and Japan on:

- Annual
- International
- Current transactions

Particular emphasis is put on Trade in Services and on the diversity of trading partners. Therefore, these statistics can be used to monitor the external commercial performance of different economies and thus assist trade negotiations in the context of the General Agreement on Trade in Services (GATS).

In the first part of this publication you can find an analysis of 2000 main features through comments, graphs and tables. The second and third parts provide a detailed review of 2000, displaying a complete set of tables for the EU, euro-zone, Norway, the USA and Japan. Finally, the fourth part gives a short description of the methodological framework.

Your needs as a user are our main concern. We can only improve with your help, so please make your comments and suggestions. Contact:

N.B.: Two publications exist as annexes to this one. "International trade in services, EU 1991-2000" focuses on a detailed breakdown of trade in services whereas "Geographical breakdown of the current account, EU 1997-2000" presents a high geographical breakdown of international transactions. In addition to the data herewith included, they include all publishable data per Member State of the European Union.

Important information

In line with the agreed allocation of responsibility, the European Central Bank is in charge of compiling and disseminating the euro-zone monthly and quarterly balance of payments statistics, whereas the European Commission (Eurostat) focuses on quarterly and annual aggregates of the EU-15.

The data comply with international standards, in particular those set out in the IMF Manual on Balance of Payments Statistics (5th edition).

The EU balance of payments is compiled by Eurostat in accordance with a methodology agreed with the ECB based on extra-EU transactions, i.e. by aggregating cross border transactions of EU residents vis-à-vis non-EU residents as reported by the 15 participating Member States. The balance of payments of the EU institutions is added to the EU aggregate. The ECB compiles the euro-zone aggregate following the same agreed methodology excluding cross-border transactions within the euro-zone. The EU institutions are treated as non-resident of the euro-zone.

Published data for the euro-zone, which include detail on services only, have been validated by the ECB. In fact, annual detailed breakdowns of the item services for the euro-zone transactions are made available by the Member States only to Eurostat. They do not match up exactly with those released by the ECB because:

- Eurostat and the ECB have different "cut-off" dates for receiving Member States' data for processing. Revisions could take place between these "cut-off" dates;
- some minor methodological differences remain between the data transmitted to Eurostat and the ECB by some Member States.

Eurostat's data for the euro-zone should therefore be regarded as memorandum items, the official data being published by the ECB.

Geographical breakdown of goods imports

This year, most EU Member States supplied imports of goods data allocated geographically according to the "principle of consignment", thus conforming to international standards. This methodology consists of reporting intra-EU imports of goods according to country of consignment (community concept) rather than origin (national concept).

However, all Member States have not implemented this methodological change at the same point in their time series. By way of consequence, a work has been developed by Eurostat in co-operation with the Member States for the calculation of the EU aggregate in order to create one single methodological break in the time series, in 1997.

EU aggregate: implementation of the "consignment principle" in the allocation of intra-EU imports of goods

Methodology	up to 1996	from 1997 onwards
Principle of consignment	Germany, Italy, the Netherlands, Austria, Portugal, Sweden, the United Kingdom	BLEU (from 1998 onwards), Denmark, Germany, Spain (from 1998 onwards), France, Italy, the Netherlands, Austria, Portugal, Finland, Sweden, the United Kingdom
Principle of origin	Spain, France, Finland, Ireland	Ireland
Other or uncertain	BLEU, Denmark, Greece	Greece

Thus, goods data for the EU aggregate from 1997 onwards are comparable with those released for the euro-zone by the ECB.

Methodological difference between Eurostat and the ECB for the compilation of investment income flows

Despite the progresses achieved for the compilation of the "goods" item, the EU-15 current account data are not fully comparable to the euro-zone figures released by the ECB. Indeed, a new methodology has been implemented by the ECB for the geographical allocation of portfolio investment income, which has consequences on investment income, income and the current account. In fact, it has been decided that receipts on portfolio investment income would be allocated geographically according to the residency of the security issuer rather than that of the immediate counterpart. On the basis of intra-EU receipts, payments on portfolio investment income should be allocated consistently between intra and extra-EU according to the residency of the end-investor. Due to a shortage of data, this methodological change could not be implemented for the compilation of the EU-15 aggregate.

Both institutions and the European Union Member States are currently working in order to minimise these discrepancies in the future.

2000 main features

In 2000, the extra-EU current account deficit increased to EUR -65.4 bn, after having sunk into the red in 1999 for first time in seven years. The deficit was equal to 0.8% of the EU GDP.

The volume of EU total external transactions¹ recorded an unprecedented annual growth rate of 26%, considerably higher than previous year's 6%.

The EU balance of *goods* suffered a sharp drop in 2000, the deficit totalling EUR -53.5 bn.

The EU surplus in *services* remained stable in 2000, falling by EUR 0.2 bn to EUR 5.6 bn.

The euro-zone's deficit in the balance of *services* worsened further in 2000 to EUR -13.8 bn, although the drop slackened off in relation to previous years.

EU bilateral current account surplus with the USA rose to EUR 50.5 bn. At the same time, bilateral current transactions swelled to EUR 917.1 bn, which represented 29% of EU total external transactions.

EU deficit with Japan slid down further to EUR -38.8 bn in 2000 while transactions expanded by 24% amounting to EUR 203.9 bn, equal to 6% of EU total external transactions.

The trade balance in Goods, according to the Balance of payments concept includes all movable property whose **ownership** is transferred from a resident to a non-resident or vice versa. Both, exports and imports are valued free on board (**f.o.b.**). These figures should be based on customs data, which are imports at **c.i.f.** values (including costs relating to transport and insurance) and exports at **f.o.b.** values (excluding transport costs). Imports at **c.i.f.** values are corrected to imports at **f.o.b.** values in order to classify costs relating to transport and insurance as transport services and insurance services. Transactions on goods crossing a border without change of ownership are not regarded as exports, but transactions on goods between residents and non-residents are regarded as exports, even if the goods do not cross a border. This explains why external trade statistics and balance of payments figures for goods are not the same.

NB: Concerning the geographical breakdown of goods' imports, a new methodology has been implemented from 1997 onwards. Please refer to the note page 7.

¹ Credits + debits excluding intra-EU transactions.

Extra-EU current account deficit worse off in 2000

The EU current account balance with the rest of the world (extra-EU) went down to EUR -65.4 bn in 2000, after having sunk into the red in 1999 for first time in seven years. The worsening of the deficit was principally due to the adverse result attained in the balance of *goods*¹, EUR -53.5 bn, when compared to the EUR 12.9 bn surplus in 1999. In addition, the surplus in *services* remained stable at EUR 5.6 bn in 2000. Moreover, the EU structural deficit in *current transfers* totalled EUR -26.1 bn in 2000, EUR 1.3 bn deeper than the previous year. In contrast, the surplus in *income* (EUR 8.6 bn) was almost double the 1999 figure.

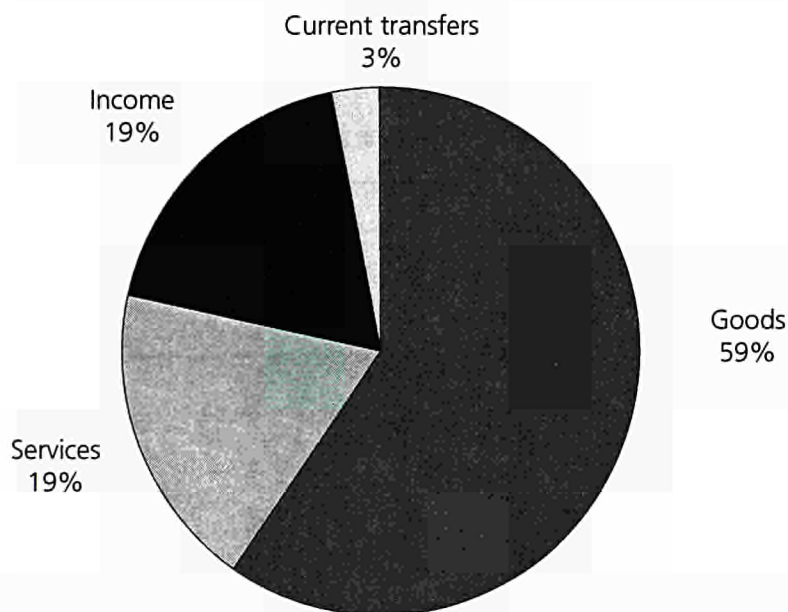

¹ According to the Balance of Payments concept: (exports FOB - imports FOB).

Total extra-EU current credits amounted to EUR 1538.2 bn while debits added up to EUR 1603.6 bn in 2000, leaving annual growth rates of 23% and 28%, respectively. This spectacular expansion was supported by a world output growth² of 4.7%, the highest in over 15 years. Nevertheless, the components of the current account did not all grow at the same pace. Exports of *goods* to non-EU-countries went up to EUR 909.0 bn while imports reached EUR 962.6 bn in 2000; these figures were attained due to annual growth rates of 23% and 32%, respectively. EU imports and exports of *services* both grew by 18% in 2000, the former totalling EUR 292.6 bn whereas the latter added up to EUR 298.2 bn. *Income* credits swelled by 30% whereas debits rose by 29%, amounting to EUR 297.3 bn and EUR 288.7 bn, respectively. Finally, *current transfers* credits totalled EUR 33.7 bn while debits went up to EUR 59.7 bn due to annual increases of 21% and 14%, respectively.

Snapshot of the EU current account

A glance at the current account balance of a given economy provides a useful picture of it. Therefore, it is possible to discern how open a country is, its specialised fields, the origin or destination of financial resources, etc. In 2000, total extra-EU current account transactions (credits + debits) added up to EUR 3141.7 bn, 59% of which were due to trade in *goods*, while transactions in *services* and *income* represented 19% each and *current transfers* the remaining 3%.

Breakdown of total extra-EU current transactions in 2000

Therefore, when the EU current account balance incurs a deficit, a deterioration of the *goods* balance is likely to be behind the scenes. During the period 1992 to 2000, the EU achieved continuous surpluses in the balance of *services* with the rest of the world. However, the balance went down from ECU 13.8 bn in 1992 to EUR 5.6 bn in 2000. At the same time, the EU had a structural deficit in *current transfers*. Regarding the balance of *income*, EU receipts exceeded payments typically since 1992, the only exception being 1998. The surplus generated by *income* transactions amounted to EUR 8.6 bn in 2000, EUR 4.0 bn more than in 1999.

² Source: IMF. World Economic Outlook, October 2001. Growth rate in real terms.

Evolution of the extra-EU current account and main its items' balances (bn EUR(ECU up to end 1998))

	1992	1993	1994	1995	1996	1997	1998	1999	2000

EU current account surplus with the USA boosted to EUR 50.5 bn in 2000

EU current transactions with partner USA went strongly up in 2000, with credits growing by 28% and debits increasing by 25%. This resulted in a total volume of transactions of EUR 917.1 bn, which represented 29% of total extra-EU current transactions. These bilateral flows led to a EUR 50.5 bn surplus for the EU, topping that of 1999 by EUR 19.2 bn. Moreover, the surplus could be described as an overall surplus since all the main items' balances of the current account had a plus sign.

Trade in *goods* resulted in a EUR 38.5 bn surplus, while *current transfers* credits exceeded debits by only EUR 0.9 bn. This surplus in *goods* accounted for 76% of the total EU current account surplus with the USA. Regarding *services*, the surplus added up to EUR 2.0 bn opposed to the EUR -5.9 bn deficit in 1999. This reversal of the *services* balance was sustained by an increase in the *transportation* surplus of EUR 3.1 bn, the change of the EUR -1.4 bn *travel* deficit into a EUR 1.4 bn surplus and the reduction in the *other services*³ deficit by EUR 2.0 bn.

Balance of the EU current account and its main items with the USA (bn EUR)

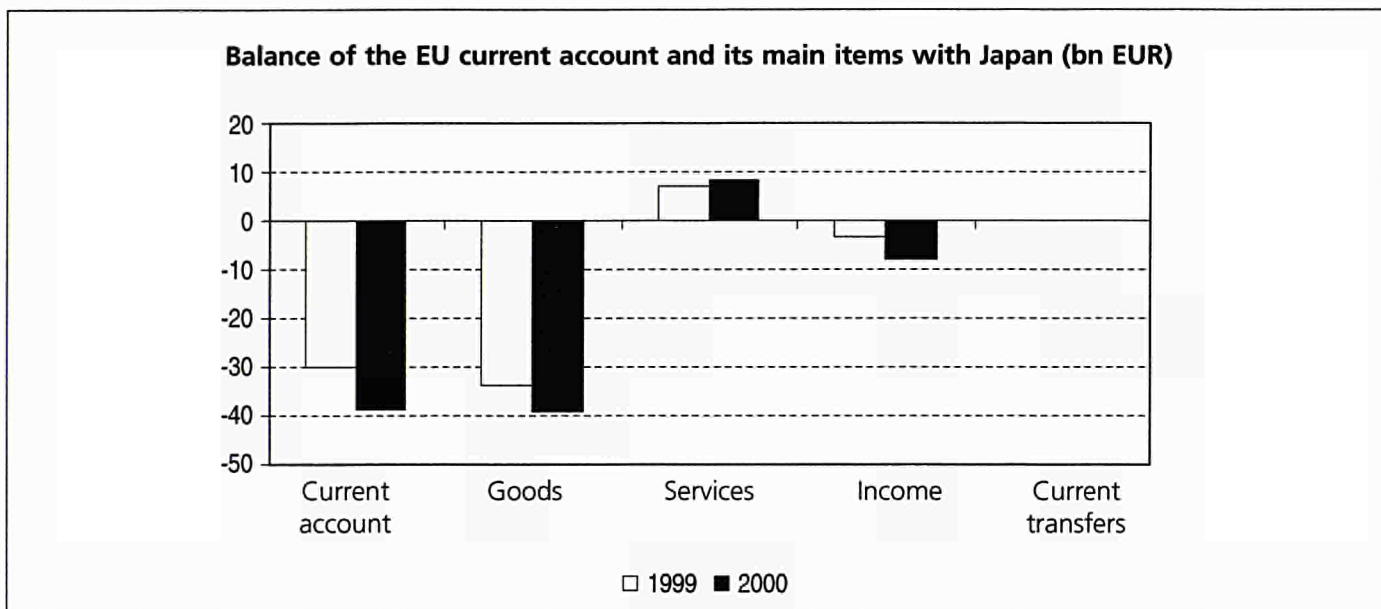

EU deficit with Japan widened to EUR -38.8 bn in 2000

EU current transactions with Japan expanded by 24% in 2000 and amounted to EUR 203.9 bn, equal to 6% of total extra-EU current transactions. These flows led to a current account deficit with Japan of EUR -38.8 bn, EUR 8.9 bn wider than in 1999. This deficit stemmed mainly from the result recorded in the exchanges of *goods*, i.e. a EUR -39.2 bn deficit, EUR 5.5 bn larger than in 1999. Trade in *goods* took up 63% of total bilateral transactions. EU trade in *services* with Japan yielded a EUR 8.2 bn surplus in 2000, EUR 1.0 bn greater than that achieved a year earlier. Concerning the

³ The item 'other services' covers services other than transportation and travel. It includes communications services, construction services, insurance services, financial services, computer & information services, royalties and licence fees, other business services, personal, cultural & recreational services and government services n.i.e.

two other main components of the current account, *income* finished in the red in 2000 at EUR -7.8 bn, whereas flows relating to *current transfers* were practically balanced.

Looking into the *services* item, the surplus in *transportation* more than doubled, reaching EUR 2.3 bn whereas the surplus in *travel* grew more modestly and stayed at EUR 4.0 bn. However, the surplus in *other services* contracted by EUR 0.5 bn, influenced by the reduction in the surplus of *other business services*⁴ by EUR 0.7 bn.

International economic situation pushed up EU current account deficit

As a general rule, from a geographical perspective, existing EU bilateral deficits became substantially deeper whereas former surpluses expanded slightly during 2000. The downward trend of the EU current account balance, initiated in 1998 after the peak in 1997, continued in 2000. However, this deterioration of the balance is partly attributable to various external shocks. In fact, provisional figures show that this trend could reverse in 2001.

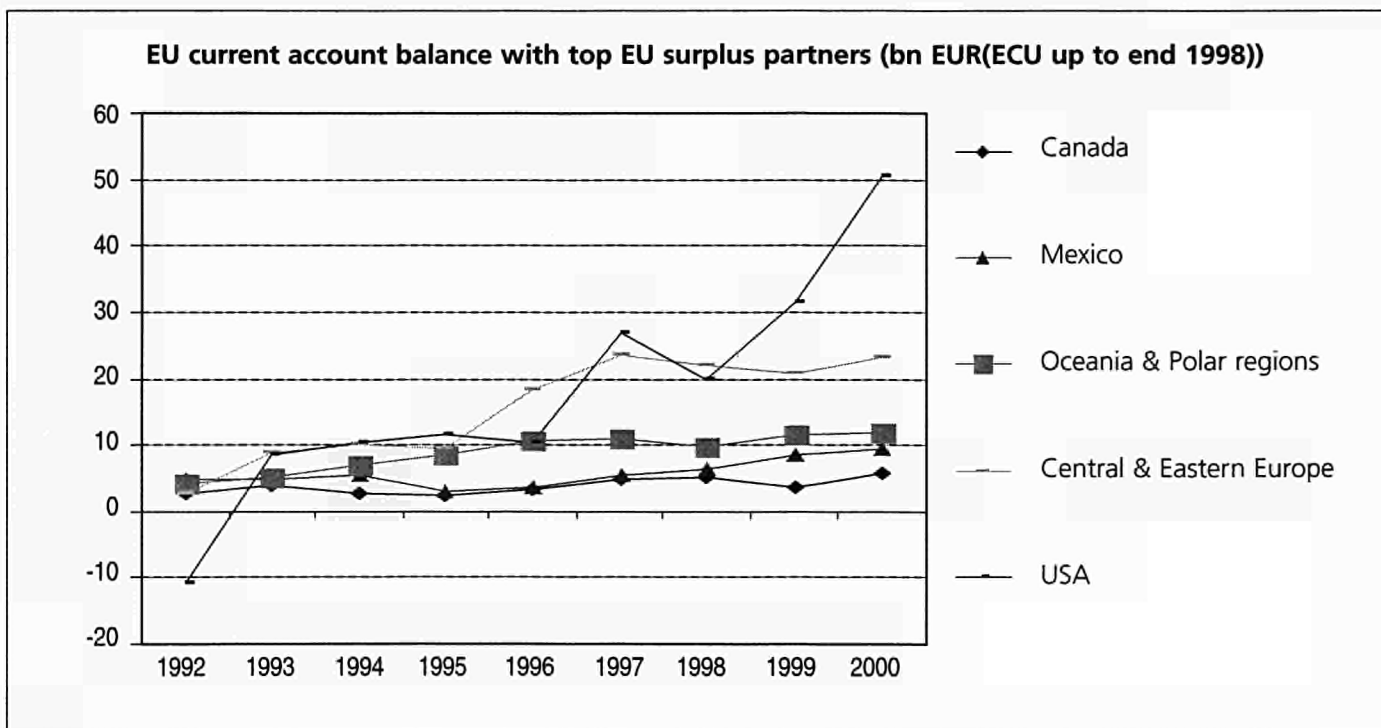

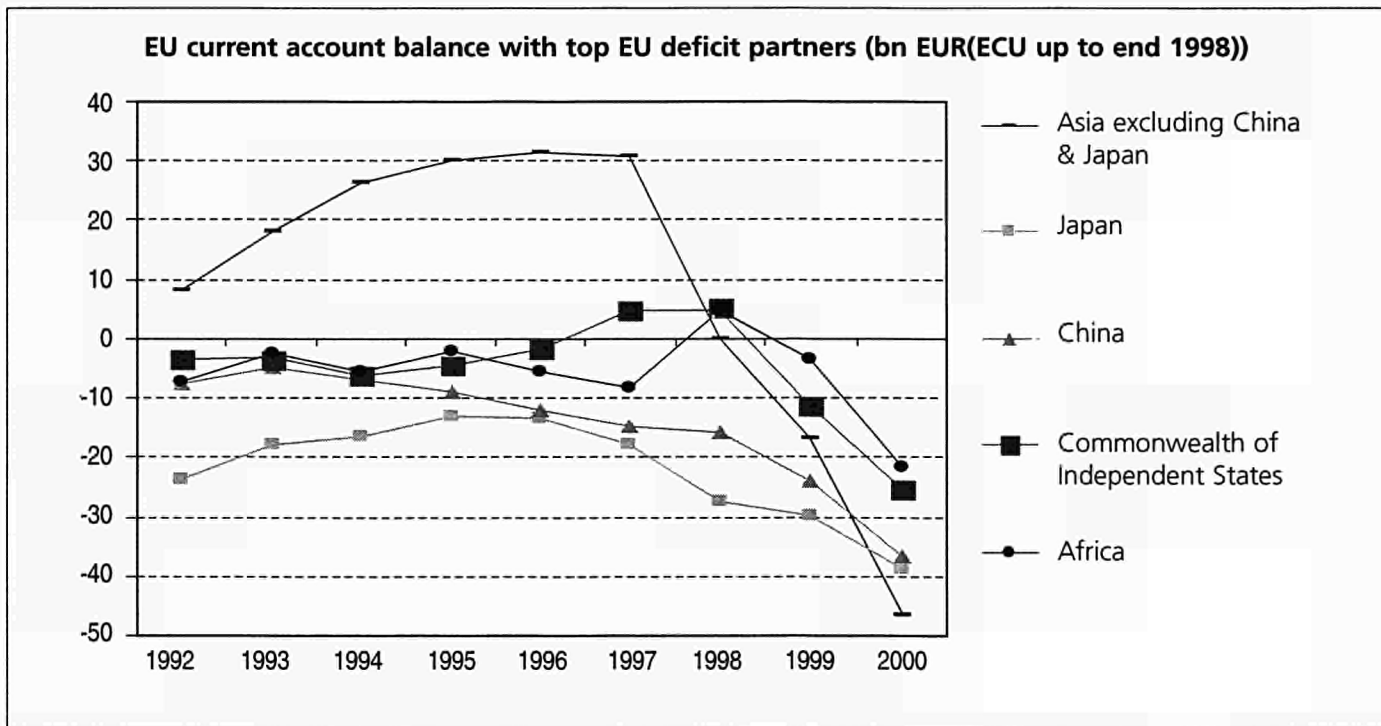

As a result of the 1997 Asian financial crisis, the EU current account balance with Asia worsened remarkably. In 2000, the EU current deficit with Asia expanded to EUR -121.6 bn from EUR -70.9 bn in 1999. This increase of more than EUR 50 bn explains, to a great extent, the total current account deficit accrued during 2000. The EUR -110.2 bn deficit in the balance of *goods* was the main reason behind this general worsening. In 2000, EU debits with partner Asia rose by 33% whilst credits increased by 23% after two years of negative and low growth (-10% in 1998 and 3% in 1999); thus, the volume of EU total current transactions with Asia reached EUR 809.9 bn in 2000.

Additionally, the supply shock relative to the increase in oil prices⁵ in 2000 (56.9%, measured in USD) played a key role in the expansion of the EU deficit. Furthermore, the weakness of the euro during 2000 also had severe repercussions on the balance since it contributed in making EU imports dearer. Subsequently, the EU current balance with OPEC countries plummeted in 2000 by EUR 31.5 bn, driving the deficit to EUR -33.4 bn. EU debits with OPEC⁶ countries climbed by 63% to EUR 115.3 bn whereas credits increased by 19% up to EUR 81.9 bn. The deficit was worse off in general with all net exporters of primary products like Africa, where the EU balance dropped to EUR -21.6 bn in 2000 from EUR -3.6 bn in 1999. Debits grew by 38% up to EUR 113.8 bn while credits rose by 17%, amounting to EUR 92.1 bn.

⁴ The item 'other business services' covers merchandising and other trade related services; operational leasing; legal, accounting, management consultancy and public relations services; advertising, market research and public opinion polling services; research and development services; architectural, engineering and other technical services; agricultural, mining and on-site processing; other; services between affiliated enterprises, n.i.e.

⁵ Source: IMF. World Economic Outlook, October 2001.

⁶ Organisation of Petroleum Exporting Countries.

On the other hand, the variation of the exchange rates of the EU Member States' currencies vis-à-vis those of the main industrialised countries in 2000, made EU products more competitive, consequently pushing up the current account balance with those partners. In 2000, the EU real effective exchange rate⁷ dropped by 11% and at the same time, the surpluses with the USA, Canada, Central and Eastern European Countries, Australia and Mexico increased. The results with OECD countries show that the EU current account surplus stepped up from EUR 85.3 bn in 1999 to EUR 117.8 bn in 2000.

⁷ Source: European Commission. It is calculated using a trade-weighted basket which contains 24 industrial countries. Real effective series are a measure of the change in competitiveness of a country, by taking into account the change in costs or prices relative to other countries. A rise in the index means a loss of competitiveness.

Key indicators in the worsening of the EU current account

Looking at the major factors that could have led the EU current account to the red, the influence of the domestic demand is noteworthy as it experienced a robust annual growth since 1998. In 2000, the nominal growth rate⁸ reached 6.8%, pushed by the final consumption of households (6.4%) and the gross capital formation (9.2%). Habitually, such an increase in the domestic demand implies a rise in the level of imports.

The share of imports of *goods* and *services* in GDP (average propensity to import) in the EU expanded progressively in the last years, reaching the benchmark of 14.7% in 2000, slightly higher than the 14.6% of USA and significantly above Japan with 9.7%. The analogous indicator for exports also experienced outstanding growth, although it could not catch up with the level of imports to attain 14.2%.

Furthermore, the 8% depreciation of the EU nominal effective exchange rate⁹ during 2000 increased the price of imported products. This phenomenon customarily leads to a contraction of imports. Nevertheless, the EU dependency on raw materials on the one hand, and the specialisation of a number of non-EU countries in certain products (mainly labour-intensive ones) on the other, did not allow this kind of substitution. These circumstances, together with the increase in oil prices in the peak of the economic cycle, marked the deterioration of the EU balance of *goods*.

(1) Measured as the sum of imports and exports divided by the GDP.

(2) The cover ratio is the result of exports divided by imports. It is expressed in percentage terms.

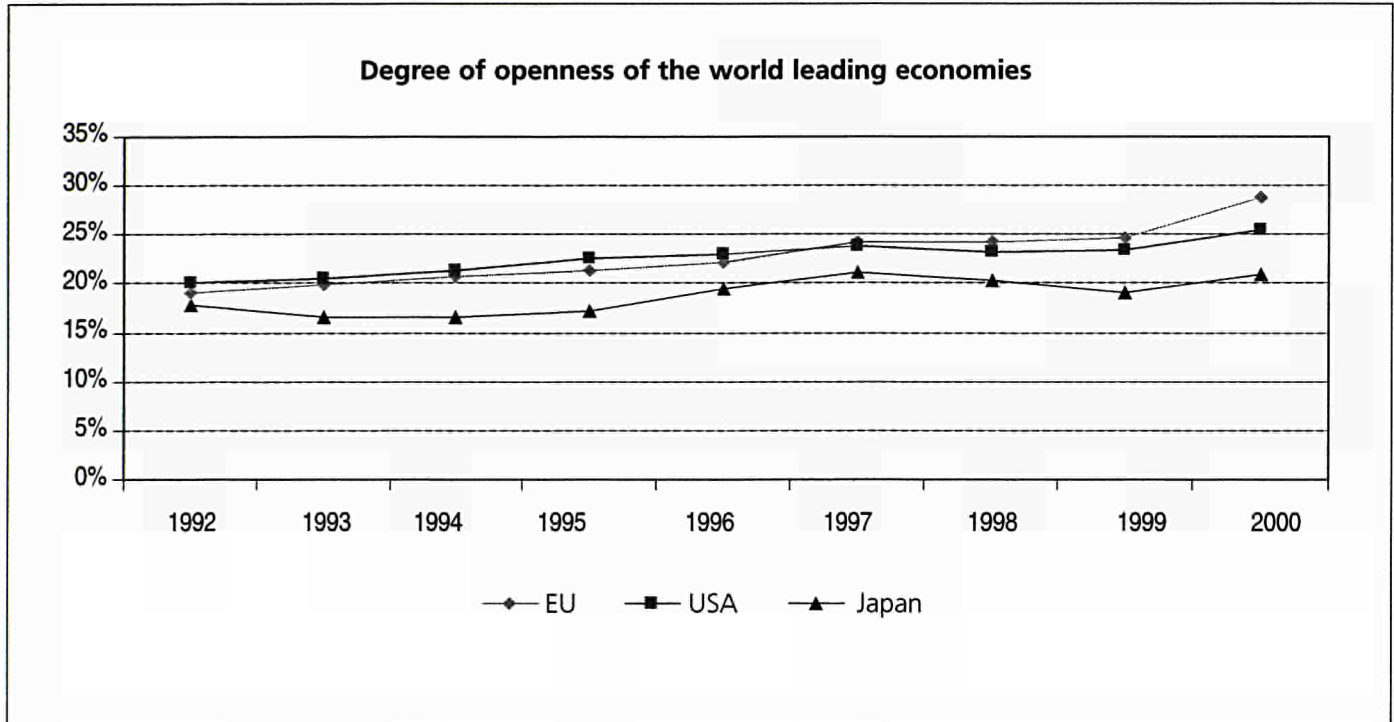

EU more open than USA and Japan

For the fourth year in a row, the EU economy continued to be more open than those of the USA and Japan in 2000; i.e. the share of EU imports and exports of *goods and services* in GDP rose to 28.9% against the 25.4% share presented by the USA. The Japanese economy was the least open with a degree of openness equal to 20.8%. In fact, the gap between the EU and its two partners increased further in 2000.

In 2000, both the share of exports and the share of imports of *goods and services* in GDP increased more rapidly in the EU than in the USA and Japan. Moreover, the share of imports in GDP grew more significantly than the share of exports in these three economies.

The EU current account deficit equalled 0.8% of EU GDP¹⁰ after showing a record surplus of 1.0% in 1997. The USA presented a current account deficit of 4.5% of GDP in 2000, whereas Japan showed a surplus of 2.5% of its GDP.

¹⁰ Source: Eurostat. National Accounts aggregates in current prices.

The EU world's top exporter again in 2000, the USA catching up

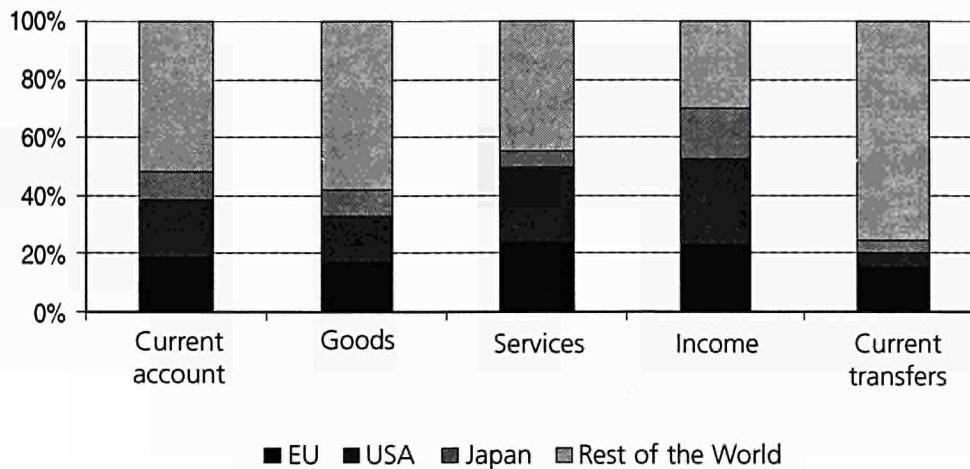

Even if the difference in the volume of exports of *goods* and *services* between the EU and the USA decreased in 2000, the latter could not replace the EU as the world's top exporter. In 2000, the USA exported 29% more *goods* and *services* than in 1999, whereas EU exports increased by 21%. Therefore, total EU exports of *goods* and *services* totalled EUR 1207.2 bn and total USA exports reached EUR 1155.9 bn. On the imports side, the USA was the world's top importer with EUR 1563.5 bn, EUR 308.3 bn more than the EU.

Geographical breakdown of world current account transactions in 2000 (bn EUR)

	EU		USA		Japan		Rest of World		World total (1)

(1) Source: IMF. Intra-EU transactions are excluded.

The USA ranked first in the export of *services* in 2000 with EUR 315.5 bn, which represented 25.5% of the world's total exports of *services*. In second place came the EU with EUR 298.2 bn, equal to 24.1% of the total. The share of Japanese exports was 6.1%.

Breakdown of World's current account credits in 2000

Breakdown of World's current account debits in 2000

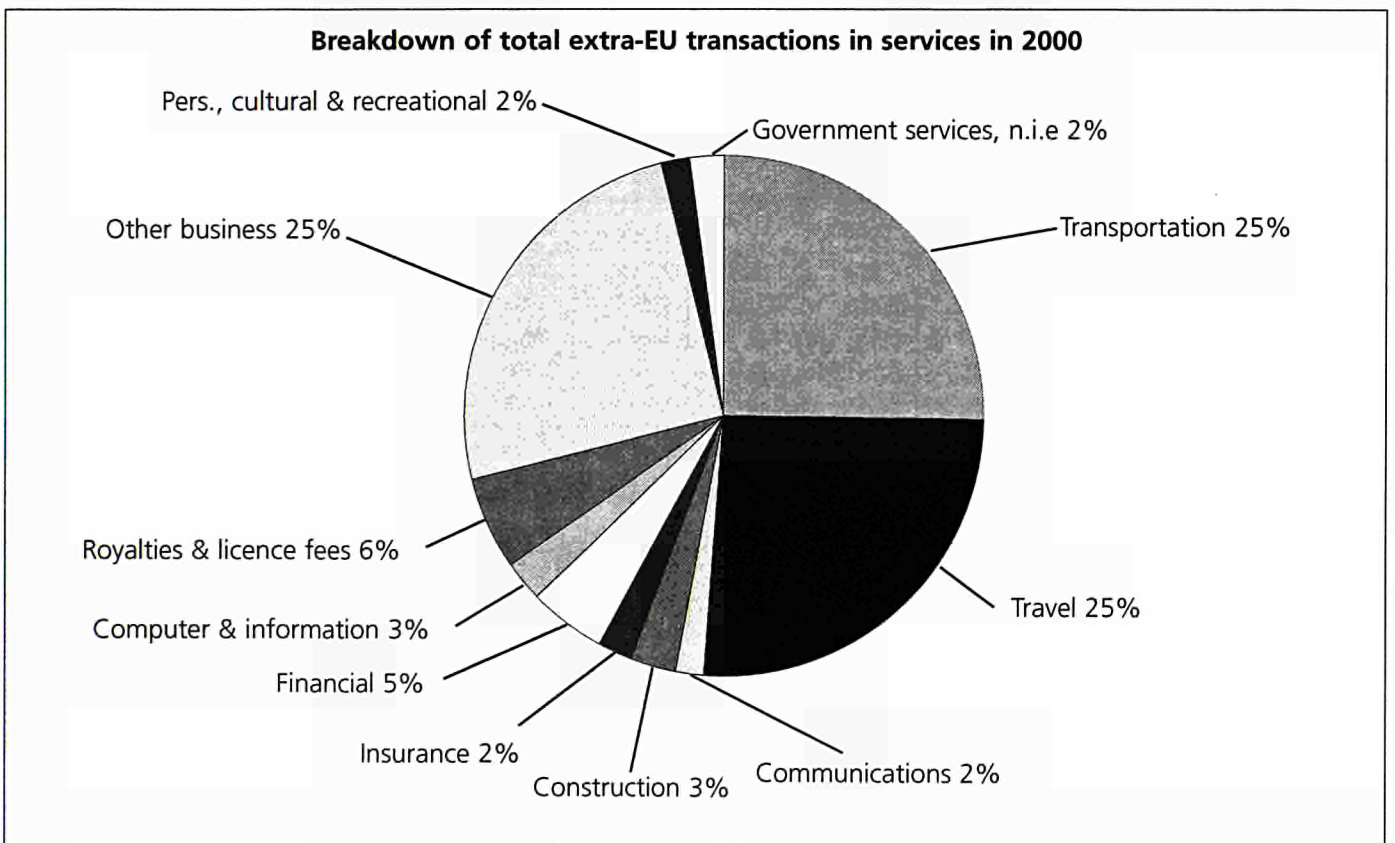

EU trade in services in 2000: almost double 1992 volume

Even though the provision of *services* beyond the boundaries of an economic territory is severely hampered by a considerable number of obstacles, trade in *services* has grown markedly since 1992. EU imports and exports of *services* rose from ECU 304.5 bn in 1992 to EUR 590.8 bn in 2000. Furthermore, the annual growth rate of trade in *services* attained in 2000 was the highest since 1992, with both credits and debits growing by 18%. However, over the same period, debits rose more rapidly than credits, and consequently the surplus diminished from ECU 13.8 bn in 1992 to EUR 5.6 bn in 2000. Since 1997, when the balance of *services* reached a high with ECU 16.2 bn, the surplus contracted uninterruptedly, although the contraction was much more tempered in 2000 (-3% in 2000 against -43% in 1999).

Composition of EU trade in services remained unchanged in 2000

The share of the main categories of *services* in relation to the total remained practically unchanged in 2000. Three quarters of total transactions in *services* corresponded to *transportation, travel and other business services*. *Royalties and licence fees* represented 6% of total *services* whilst *financial services* accounted for 5% after boosting by 32% in 2000. *Computer and information services* and *construction services* cornered 3% of EU total transactions in *services* each. Finally, *insurance services, communications services, personal, cultural and recreational services* and *government services, n.i.e.* presented all a share of 2%.

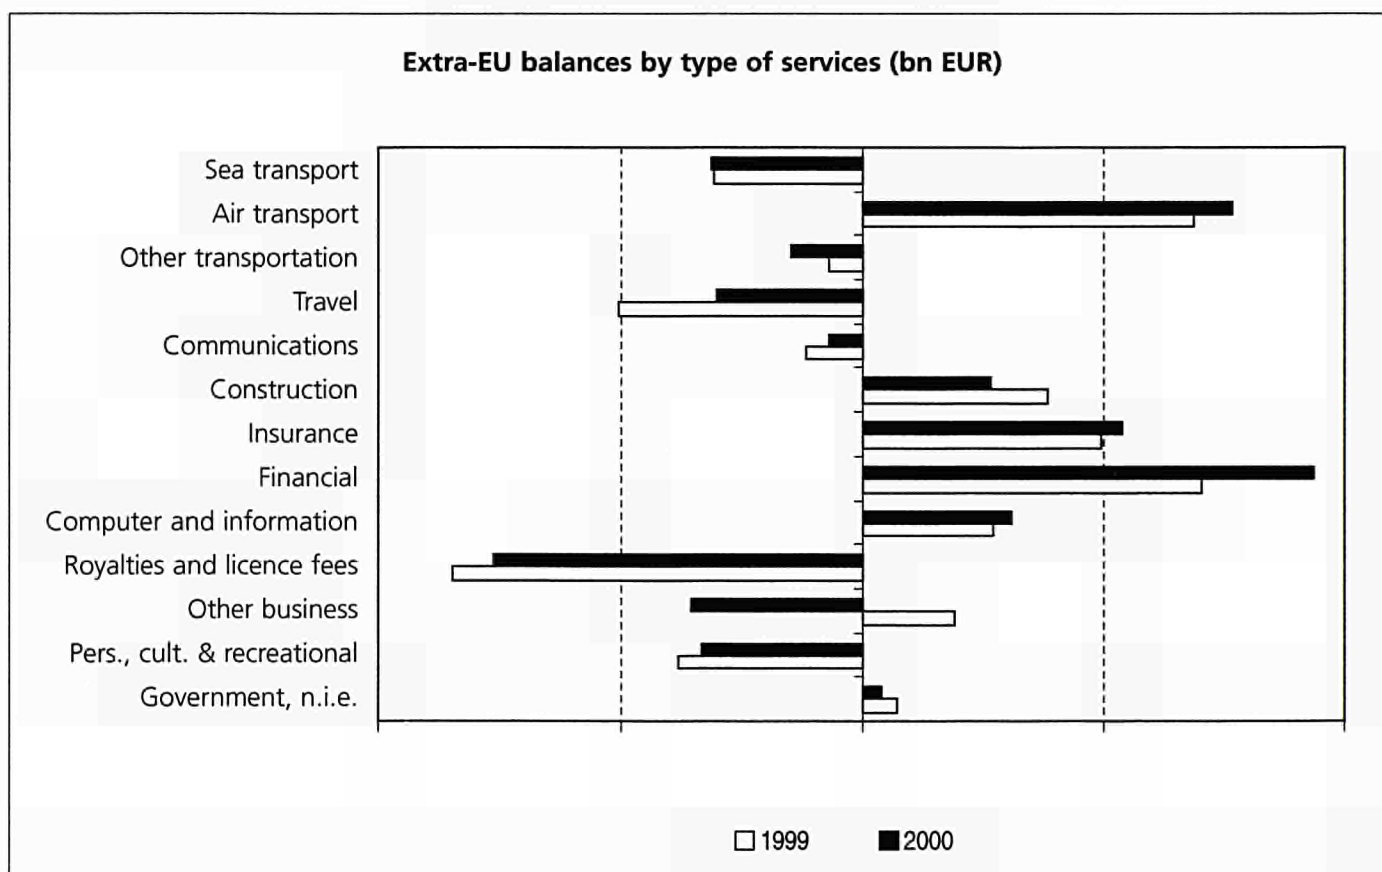

EU services in 2000: travel deficit contracts by EUR 2.0 bn and transactions in transportation services boost by 23%

Air transport presented a EUR 7.6 bn surplus in 2000, which contrasted with the deficits recorded by *sea transport* and *other transportation*, EUR -3.1 bn and EUR -1.5 bn, respectively. Moreover, exports and imports of *transportation services* increased by 23% and 24%, respectively, together amounting to EUR 149.7 bn, mainly due to the striking rise of *sea transport*, which saw a 35% growth in 2000. Additionally, the deficit in *travel* contracted notably in 2000, totalling EUR -3.0 bn. The volume of *travel* transactions in 2000 was more than double that of 1992.

The customary EU surplus in *insurance services* rose to EUR 5.3 bn in 2000; however, the main contribution to the EUR 5.6 bn surplus in the balance of *services* was from *financial services*, which yielded a EUR 9.3 bn surplus in 2000 (EUR 2.3 bn more than in 1999). Both exports and imports of *financial services* rose by 32% in 2000 in relation to 1999, recording an unprecedented growth rate. Hence, exports amounted to EUR 18.7 bn while imports totalled EUR 9.3 bn. Nevertheless, concerning cumulative growth since 1992, the most stunning raise was recorded in *computer and information services*; these transactions multiplied more than four-fold during this period, passing from ECU 3.7 bn to EUR 15.7 bn. The noteworthy deficit recorded in *royalties and licence fees* (EUR -7.6 bn), together with the EUR -3.6 bn deficit in *other business services*, counterbalanced part of the positive results achieved in other items. Regarding *royalties and licence fees*, the deficit registered by this item has become a structural phenomenon in the EU, predominantly due to the amount of the deficit accrued with the USA, i.e. EUR -10.1 bn in 2000. Nevertheless, the deficit narrowed by EUR 0.9 bn in relation to 1999.

Extra-EU balances by type of services (bn EUR)

The most exceptional variation in terms of net flows concerned *other business services*, passing from a EUR 1.9 bn surplus in 1999 to a EUR -3.6 bn deficit in 2000. The balances of all its sub-items recorded larger deficits or a less significant surplus than in 1999. Thus, the largest deficit, obtained in *merchandising and other trade related services*, passed from EUR -0.2 bn in 1999 to EUR -3.9 bn in 2000. The deficit in *operational leasing* stood at EUR -0.8 bn in 2000 compared to EUR -0.1 bn in 1999, whereas the surplus in *miscellaneous business, professional and technical services* decreased by EUR 1.0 bn to EUR 1.2 bn.

Euro-zone's external deficit in the balance of services rose to EUR -13.8 bn

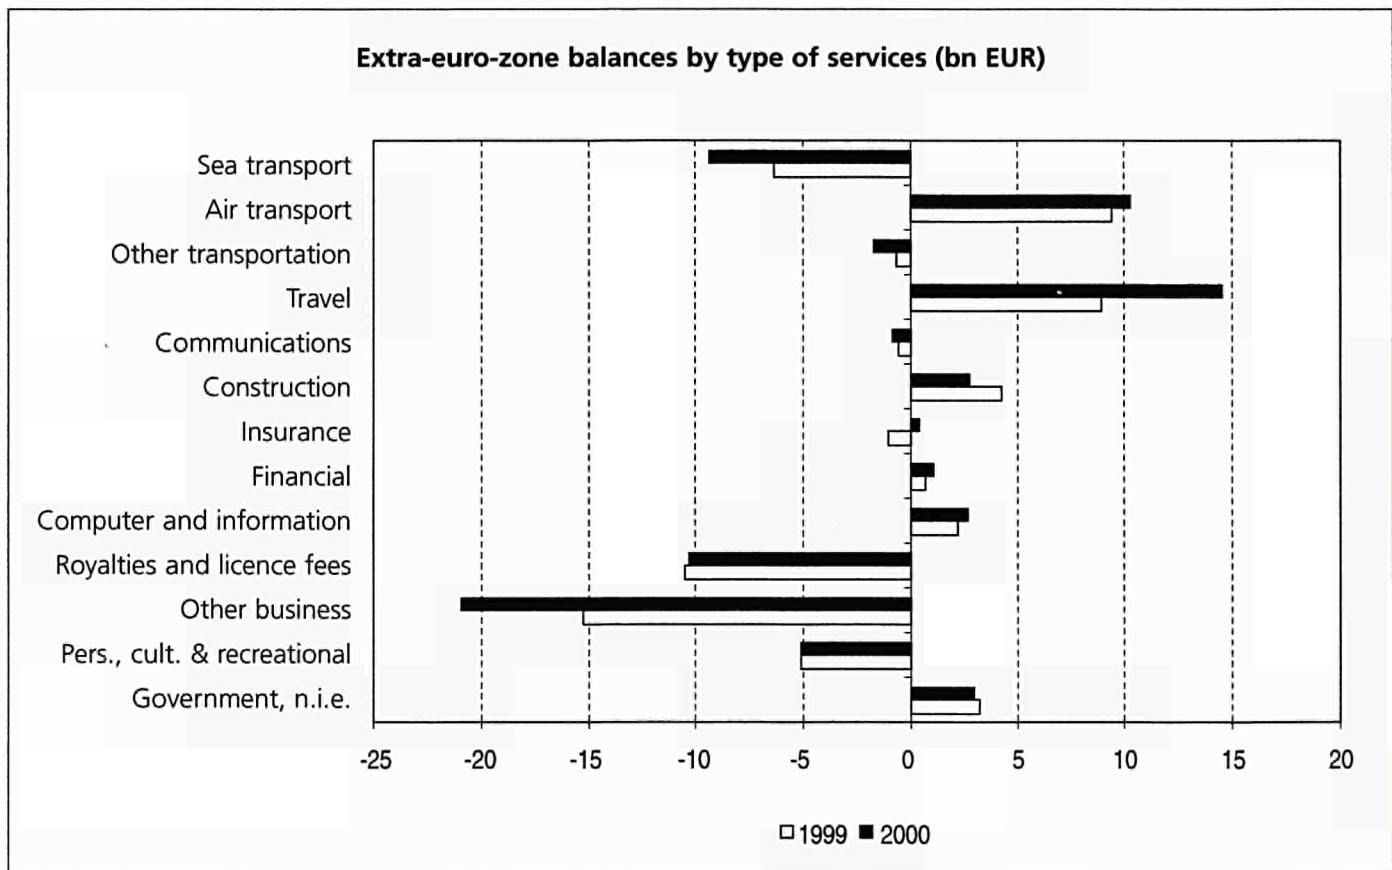

The patterns followed by the euro-zone and the EU concerning the exchange of *services* with the rest of the world have had much in common in recent years, i.e. the balances have visibly tended to worsen. However, in 2000 the EU saw a EUR 5.6 bn surplus in *services* with non-EU countries, while the euro-zone registered an external deficit of EUR -13.8 bn. In fact, the euro-zone's ECU 0.7 bn surplus achieved in 1997 turned into a slight deficit of ECU -0.1 bn in 1998. At this point, the balance fell sharply in 1999 down to EUR -10.9 bn and worsened further in 2000 to EUR -13.8 bn, although the drop slackened off in 2000.

Comparison between extra-EU and extra-euro-zone trade in services in 2000 (bn EUR)

	Exports		Imports		Net	
	EU	EUR-11	EU	EUR-11	EU	EUR-11

<i>Services not allocated</i>	0.0	0.0	0.0	0.0	0.0	0.0

The main factors aggravating the euro-zone's deficit in 2000 were, first, the EUR 2.3 bn surplus in *transportation* in 1999 turned into a EUR -0.8 bn deficit in 2000; the EUR 3.0 bn expansion of *sea transport* deficit was among the principal triggers. Second, the decline in the *construction services* surplus to EUR 2.7 bn (EUR 1.6 bn fall). Third, the adverse evolution of the balance of *other business services*, which plunged to EUR -21.0 bn. This deficit reflected the performance of the balances of *merchandising and other trade-related services* (EUR -6.0 bn deficit) and *miscellaneous business, professional and technical services* (EUR -14.6 bn deficit) in 2000. In opposition to this, the *travel* surplus increased notably in 2000 up to EUR 14.5 bn, EUR 5.6 bn higher than in 1999. Moreover, the EUR -1.0 bn deficit in *insurance services* in 1999 turned into a EUR 0.4 bn surplus in 2000.

Exports and imports of *services* both grew by 16% during 2000 reaching EUR 276.5 bn and EUR 290.3 bn, respectively. Exports and imports of *transportation services* increased more than the average of total *services* (18% against 16%), adding up to EUR 137.4 bn. On the other hand, *travel* transactions grew slightly below this average (15%), to give EUR 144.5 bn. Transactions in *financial services* increased by 29% up to EUR 26.2 bn, and *communications services* by 24% to EUR 12.4 bn.

Euro-zone partners in trade in services

The four EU Member States not in the euro-zone¹¹ in 2000 (Denmark, Greece, Sweden and the United Kingdom) accounted for nearly one third of total extra-euro-zone exports of *services*. Similarly, 27% of the total extra-euro-zone imports of *services* came from these four countries, the United Kingdom being the main exporter.

The USA was the largest recipient of the euro-zone's *services* outside the EU in 2000; exports to the USA amounted to EUR 71.2 bn (25% more than in 1999). At the same time, it was the leader in the provision of *services* to the euro-zone; imports of *services* from the USA went up to EUR 82.4 bn (17% more than in 1999). Thus, the deficit narrowed to EUR -11.2 bn. However, it must be highlighted that there was a gap of EUR 13.2 bn between the euro-zone's balance with the USA and the EU's, since the latter achieved a EUR 2.0 bn surplus with the USA. This was chiefly due to the considerable bilateral surplus attained by the United Kingdom, EUR 10.5 bn.

¹¹ Greece became a member of the euro-zone on 01/01/2001.

Figures for all the different current international transactions with the main partners

From tables 2.1.1. and 2.1.2., a user can obtain information

- ☛ on **exports, imports** and **net** flows, expressed in million of **EUR**;
- ☛ for the year **2000**;
- ☛ of the **EU-15** (table 2.1.1) and the **EUR-11** (table 2.1.2);
- ☛ in relation to **World** (including intra zone flows), **rest of the world** (extra-EU-15/extra-EUR-11), **Canada, USA** and **Japan**;
- ☛ for the **main current account items of the Balance of Payments** and **47 items of internationally tradable services**.

For example:

From table 2.1.1., in **2000**, the **EU-15** has **exported EUR 5571 million** towards, and **imported EUR 6260 million** of **communications services** from the **rest of the world** (extra-EU-15).

A more precise geographical detail of the main current international transactions

Each table of this set refers to one item of the current account.

Tables 2.2.1. to 2.2.23. report information

- ☛ on **exports, imports** and **net** flows, expressed in million of **EUR**;
- ☛ for the year **2000**;
- ☛ of **23 items of the current account** (goods, services, transportation, travel, communications services, income...);
- ☛ of the **EU-15**, the **EUR-11**, **Norway**, **USA** and **Japan** (in columns);
- ☛ in relation to **50 partner countries and zones**.

For example:

- From table 2.2.2., in **2000** the **exports** of **services** towards **Africa** were of **EUR 17797 million** for **EU-15** when they were of **EUR 12244 million** for **EUR-11**, **EUR 1162 million** for **Japan** and **EUR 108 million** for **Norway**.
- From table 2.2.13., in **2000** the **EU-15** imported **computer and information services** from **the USA** for **EUR 4071 million** and from **Asia** for **EUR 703 million**.

Historical series since 1990

Each table of this set reports data of the European Union trade with one partner.

From tables 2.3.1. to 2.3.6., a user can find information

- ☛ on **exports, imports** and **net** flows, expressed in million of **EUR** (million of **ECU** to end 1998);
- ☛ of the **EU** (**EU-12** between 1990 and 1991; **EU-15** from 1992 onwards);
- ☛ in relation to partners **World, intra-EU, extra-EU, Canada, USA** and **Japan**;
- ☛ for the years **1990 to 2000**;
- ☛ for the **main current account items of the Balance of Payments** and **47 items of internationally tradable services**.

For example:

- From table 2.3.3., in **construction services** the **EU** has been in surplus with the **rest of the world** from **1990 (ECU 2286 million)** to **2000 (EUR 2646 million)**.
- We can also see from table 2.3.6. that **services** exports from the **EU** to **Japan** doubled between **1990 (ECU 9215 million)** and **2000 (EUR 18451 million)**.

IV
METHODOLOGICAL FRAMEWORK

For the attention of the reader

The idea of this chapter is to provide a simplified explanation that helps the reader to understand the practical meaning of current international transactions. It does not pretend to give an exhaustive description of such transactions. For a more detailed information, the reader should refer to the fifth edition of the IMF Balance of Payments Manual.

What are current international transactions?

From a country's point of view, a **current international transaction**, designated an export, takes place when a resident sells a real resource (goods, services and income) beyond the border and receives foreign currency as a counterpart. The opposite situation - an import - in which an input of real resource and an output of national currency occur in the country, reflects a current international transaction too.

Actually, current international transactions cover different kinds of economic flows. They comprise **international exchanges** and **current transfers**:

- **International exchanges** are the international economic flows implying a financial counterpart. All exports and imports of goods (involving changes in ownership), and of services, are international exchanges. Moreover, these also consist of international provision of labour, as it is the case of seasonal or other short-term workers (less than one year) and border workers who have centres of economic interest in their own economies; and of international remuneration on financial assets and liabilities, such as the payment of interests on money borrowed abroad and of dividends to non-resident shareholders for example.
- **Transfers** are unilateral economic flows that involve changes in ownership of goods and/or financial assets. They often refer to items that are given away rather than exchanged. There are capital transfers and current transfers; the latter only are regarded as current transactions. As an illustration, an international current transfer occurs when the government or a humanitarian organisation gives money, food or medical supplies to another country. The contributions of Member States to the budget of the European Union Institutions are considered as current transfers as well.

What is the conceptual framework of international transactions?

A country's current international transactions comprise all the transactions between its residents and non-residents. They are recorded in the **balance of payments' current account**.

The **balance of payments** consists of two major accounts: the **current account** takes care of real resources whereas the **capital and financial account** involves financial items.

The processing of these transactions follows the rules put forward in the **fifth edition of the International Monetary Fund Balance of Payments Manual (BPM5)**.

This publication covers only current international transactions, i.e., the current account part of the balance of payments.

How do countries deal with current international transactions?

International transactions implicate a big variety of real resources. In order to describe all kinds of transactions, the current account is subdivided into a number of accounts. The broadest categorisation differentiates **goods, services, income** and **current transfers**. These four accounts are broken down into very detailed sub-items such as communications services which are in turn subdivided into telecommunications services and postal and courier services.

Current transactions are, in principle, recorded in **gross** flows. Each item should display a **credit** and a **debit** value in order to show exports and imports for this item. Due to problems of identifying gross flows for certain items some transactions are recorded **net**, that is as the difference between a credit and a debit. These offsetting mechanisms have the effect of underestimating credit and debit flows. Whenever they occur, these problems will be mentioned in the definitions below.

Why are the balance of payments of all the countries in the world not fully compatible or comparable?

Problems of consistency, asymmetries

Although in theory, all balance of payments accounts are drawn up in accordance with an internationally accepted methodology, the balance of payments of all the countries in the World are not fully compatible or comparable. There are many reasons for this lack of comparability. The following are some examples:

- Not all countries have the same resources for recording and analysing information and because of the special features of data collection they are sometimes obliged to depart from the recommended standards (in the case of insurance, for example).
- Not all countries agree on the treatment of certain long term activities (e.g. construction services).
- The increasing speed of world-wide economic integration and proliferation of transactions between related companies makes it difficult to allocate flows between services and direct investment.

The statistical problems mentioned above generate statistical discrepancies between countries' current account balances. These discrepancies are called asymmetries. More specifically:

Bilateral Asymmetry: The balance declared by one compiling economy in relation to another does not correspond to the balance declared by its partner. The sum of these balances, called bilateral asymmetry should in theory be nil. However, misallocation of transactions creates an asymmetry at detailed item level that can be offset at an aggregated level. In the same way, a poor geographical breakdown creates a bilateral asymmetry which may be offset at an aggregated level of geographical breakdown.

Asymmetry in terms of geographical aggregation: the world total of current account credits does not tally with the world total of debits, whereas in theory they should be equal. The difference between current account credits and debits is termed *world-wide asymmetry* (or discordance) of current account payments.

The current account and its subdivisions

➤ Goods

This is generally the biggest category of the current account. **Goods** cover **general merchandise, non monetary gold** and since the implementation of the BPM5, **goods for processing, repairs on goods** and **goods procured in ports by carriers**. The most important component, **general merchandise**, includes all movable goods whose ownership is transferred from a resident to a non-resident and vice-versa.

➤ Services

Trade in **services** is the second major category of the current account. If the main part of these transactions is made in a commercial purpose, the services account also allows non-commercial transactions under the item *government services n.i.e.*

Considering its intangible nature, international trade in services is much more difficult to record than trade in merchandise. In certain cases for example, practical difficulties for identifying gross flows may occur as many services can be paid for by means of an international offsetting mechanism. Furthermore, certain transactions between related companies are also settled by an offsetting mechanism. In both cases the identified payment corresponds to the net result of a number of transactions that are difficult to pinpoint. Such problems could involve underestimation of the flows of services.

Transactions in services are many and varied. They include amongst others: the shipping of Italian shoes by a Greek vessel; the construction of a shelter in Switzerland by a German company; the subscription to a British newspaper by a Spanish student; the purchases of souvenirs by a Japanese tourist in France; the profit on the sale of Dutch cheese in Portugal by a Belgian merchant; the payments of annual fees by a German franchisee to its American franchisor.

The item **services** is subdivided in three components: **transportation, travel** and **other services**.

➤ Transportation

This item covers all transportation (sea, air and other - including land, international waterway, space and pipelines) services that are performed by residents of one economy for those of another and that involve the carriage of passengers - registered in balance of payments under **passenger services**; the movement of goods - under **freight services**; and rentals (charters) of carriers with crew, and related supporting and auxiliary services - under **supporting, auxiliary and other transport services**.

➤ Travel

Item **travel** covers primarily the goods and services acquired from an economy by travellers during visits of less than one year in that economy. The goods and services are purchased by, or on behalf of, the traveller or provided, without a quid pro quo, for the traveller to use or give away. Excluded is the international carriage of travellers, which is covered in passenger services under transportation.

➤ Other services

Since services have become increasingly important in international transactions, a greater detail in the breakdown is now required. The item *other services*, which is largely broken down, can not be regarded as a mere residual item as it embraces a wide range of various transactions.

Other services reports transactions in **communications services, construction services, insurance services, financial services, computer and information services, royalties and licence fees, other business services, personal, cultural and recreational services** and **government services**.

- Communications services cover two main categories of international communications transactions between residents and non-residents: telecommunications services and postal and courier services. *Telecommunications* encompass the transmission of sound, images, or other information by telephone, telex, telegram, cable, broadcasting, satellite, electronic mail, facsimile services etc. and include business network services, teleconferencing, and support services. *Postal and courier services* encompass the pick-up, transport and delivery of letters, newspapers, periodicals, brochures, other printed matter, parcels, and packages by national postal administrations and other operators. Also included are post office counter and mailbox rental services.
- Construction services cover work performed on construction projects and installations by employees of an enterprise in locations outside the economic territory of the enterprise. The work is generally performed for a short time period (less than one year but this rule is to be applied flexibly). Goods imported by the enterprise for use in the projects, and expenditures for local supplies, etc. are included in the value of these services rather than under goods.
- Insurance services cover the provision of various types of insurance to non-residents by resident insurance enterprises, and vice versa. Such services cover freight insurance, other types of direct insurance (i.e. life - including pension and annuity services, other casualty or accident, health, general liability, fire, marine, aviation, etc. insurance); also included in insurance services are agent commissions related to insurance transactions. International insurance services are estimated or valued by service charges included in total premiums earned rather than by total premiums. Gross premiums and gross claims are recorded as memorandum items.
- Financial services cover financial intermediary and auxiliary services (except those of insurance enterprises and pension funds) conducted between residents and non-residents. Included are intermediary service fees, such as those associated with letters of credit, bankers' acceptances, lines of credit, financial leasing, and foreign exchange transactions. Also included are commissions and other fees related to transactions in securities - brokerage, placement of issues, underwritings, redemptions, and arrangements of swaps, and options, and other hedging instruments; commissions of commodity futures traders; and services related to asset management, financial market operational and regulatory services, security custody services, etc. Service charges on purchases of International Monetary Fund resources are also included. Financial intermediation services indirectly measured are excluded.
- Computer and information services cover computer data and news-related service transactions between residents and non-residents. *Computer services* cover hardware and software consultancy and implementation: provision of advice and assistance on matters related to the management of computer resources; analysis, design and programming of systems ready to use, and technical consultancy related to software; development, production, supply and documentation of customised software including operating systems made on order for specific users; maintenance and other support services such as training. Excluded are packaged (non-customised) software and non-specific computer training courses which are treated in the same way as *other educational services*. *Information services* include database services: database conception, data storage, and data dissemination on-line and on magnetic media; news agency services including provision of news, photographs, and feature articles to the media; and direct, non-bulk subscriptions to newspapers and periodicals.
- Royalties and licence fees cover the exchange of payments and receipts between residents and non-residents for the authorised use of intangible, non-produced, non-financial assets and proprietary rights (such as patents, copyrights, trademarks, industrial processes, franchises, etc.) and with the use, through licensing agreements, of produced originals or prototypes (such as manuscripts and films).
- Other business services cover various categories, other than those previously defined. The grouping of these services is not indicative of their relative importance. The three following categories are identified:
 - Merchating and other trade-related services cover commissions on goods and services transactions between (i) resident merchants, commodity brokers, dealers, and commission agents and (ii) non-residents.

Merchating is defined as the purchase of a good by a resident from a non-resident and the subsequent resale of the good to another non-resident; during the process, the good does not enter or leave the compiling economy. The difference between the value of goods when acquired and the value when sold

is recorded as the value of merchanting services provided.

Other trade-related services include transactions in ships, aircraft, and auction sales. Franchising fees, brokerage in financial services and transport-related fees are excluded.

- Operational leasing services (rental) without operators cover resident/non-resident leasing and charters of ships, aircraft, and transportation equipment such as railway cars containers, rigs, etc. without crew. Financial leasing, leasing of telecommunications lines and leasing of land, buildings and other real estate, and car rentals to foreign travellers are excluded.
- Miscellaneous business professional and technical services are subdivided into:

- Legal, accounting, management consulting, and public relations services which cover the provision (by/for residents for/by non-residents) of legal advice, representation, and documentation; auditing, bookkeeping, and tax consultant services; and management consulting related to the provision of advice, guidance, or operational assistance to business.

Advertising, market research and public opinion polling services transacted between residents and non-residents cover the design, creation, and marketing of advertisements by advertising agencies; media placement, including the purchase and sale of advertising space; exhibition services provided by trade fairs; the promotion of products abroad; market research; and public opinion polling abroad on various issues.

Research and development services cover those services that are transacted between residents and non-residents and associated with basic research, applied research, and experimental development of new products and processes. In principle, such activities in the sciences, social sciences, and humanities are covered; included is the development of operating systems that represent technological advances. Market research, technical studies, and consultancy work are excluded.

Architectural, engineering and other technical services cover resident/non-resident transactions related to architectural design of urban and other development projects; planning and project design and supervision of dams, bridges, airports, turnkey projects, etc.; surveying, cartography, product testing and certification, and technical inspection services.

Agricultural, mining and on-site processing services cover services incidental to agriculture, hunting, trapping, forestry and logging, and fishing; services rendered at oil and gas fields; waste treatment and depollution services; sanitation and other on-site processing.

Other miscellaneous business, professional and technical services cover placement of personnel, security and investigation services, translation and interpretation, photographic services, building cleaning, etc.

Services between affiliated enterprises, n.i.e. is a residual category. It covers payments by affiliates to their parent companies for general management costs (for planning, organising and controlling) and reimbursements of expenses settled directly by parent companies, funds transferred by parent companies to affiliates for covering overhead expenses, and any other services between affiliated enterprises that cannot be broken into individual service categories.

- Personal, cultural and recreational services involving transactions between residents and non-residents are subdivided into two categories:
 - Audiovisual and related services comprise services and associated fees related to the production of motion pictures, radio and television programs, and musical recordings.
 - Other personal, cultural and recreational services comprise services such as those associated with museums, libraries, archives, and other cultural, sporting, and recreational activities. Also included are fees for services, including provision of correspondence courses, rendered abroad by teachers or doctors. All expenditures by travellers on education and health are excluded.
- Government services, n.i.e. is a residual category covering government service transactions (including those of international organisations) not contained in previous classifications. Included are all transactions by embassies,

consulates, military units, and defence agencies with residents of economies in which the embassies, etc. are located and all transactions with other economies.

Transactions in this category comprise those for goods and services (such as office supplies, furnishings, utilities, official vehicles and operation and maintenance, and official entertainment) and personal expenditures incurred by diplomats and consular staff and their dependants in the economies in which they are located. Also included in this category are transactions, by other official entities (such as aid missions and government tourist, information, and promotion offices) located in economies abroad. Included, as well, are transactions that are associated with general administrative expenditures, etc. and not classified elsewhere. In addition, transactions associated with aid services that are provided by non-military agencies, do not give rise to any payments, and have offsets in transfers are included in this category. Last, transactions associated with the provision of joint military arrangements and peacekeeping forces, such as those of the United Nations, are included in *government services, n.i.e.*

► Income

Income contains two main items:

Compensation of employees records wages, salaries and other benefits, in cash or in kind, earned by individuals for work performed for economic units whose place of residence is different from their own (border workers, seasonal workers, employees of international organisations, etc.).

Investment income covers income which a resident entity derives from the ownership of external financial assets (credit) and income non-residents derive from their financial assets invested in the compiling economy (debit). This includes interest and dividends on direct, portfolio and other investments.

► Current transfers

Current transfers form a group separate from **goods, services** and **income** because they are generally conceived as showing distinctive characteristics. However, the distinction between real resources and transfers is sometimes rather arbitrary. For example, receipts by an economy from certain individuals working abroad are classified either as current transfers or as compensation of employees, depending on how long the individuals have stayed in the countries where they are working. The BPM5 sets a number of criteria that enable to establish whether a flow is a current transfer or not.

Current transfers are all transfers that are not transfers of capital. Therefore, they consist of all transfers that do not involve:

- transfers of ownership of fixed assets,
- transfers of funds linked to, or conditioned upon, acquisition or disposal of fixed assets,
- forgiveness of liabilities by creditors when no counterpart is received in return.

Current and capital transfers may also be distinguished from their effects: current transfers directly affect the level of disposable income and should affect the consumption of goods and services whereas capital transfers should result in changes in the stocks of assets of one or both parties to the transaction.

This publication concerns EU international transactions between 1990 and 2000, and is divided into two parts.

The first part is analytical and gives the most recent portrait of European Union (EU-15) international transactions. It highlights the main trends of EU trade in services in 2000 and underlines the results of the EU with its main partner zones. An analysis of the euro-zone trade in services is also provided.

The second part presents statistics on international trade in services of the EU and the euro-zone (EUR-11) with partner World, extra-EU/EUR-11, intra-EU, Canada, the United States and Japan, for the main current account items (goods, income, current transfers...) and 47 items of internationally tradable services. The period covered is from 1990 to 2000. Statistics are also available for 2000 on the geographical breakdown (in relation to 50 partner zones and 23 items) of the current account of the EU, the euro-zone, Norway, the United States and Japan.

To allow comparisons, these figures have been harmonised according to a common methodology.

Information is also given on the methodological framework of the 5th IMF manual which is used for current international transactions. All flows are expressed in Euro (in Ecu to end 1998).

European Commission

EU international transactions — Data 1990-2000

Luxembourg: Office for Official Publications of the European Communities

2002 — 95 pp. — 21 x 29.7 cm

**Theme 2: Economy and finance
Collection: Detailed tables**

ISBN 92-828-8654-9

Price (excluding VAT) in Luxembourg: EUR 25
