Foreword

1. Introduction

The monthly bulletin on external trade, published by Eurostat in the B series, Short-term trends, sets out to provide within the shortest possible deadlines data on short-term trends in the Community's external trade. In particular, it contains data on the Community's trade flows with its trading partners and the various economic areas and a breakdown of this data by major product group. The bulletin also provides an overview, based on data from various international sources, of the place occupied by the Community in the external trade of its main trading partners and of third countries. Trade flows between Member States are recorded under the Intrastat system and will be published at a later date.

The Community's external trade statistics at the most detailed classification level are published monthly on CD-ROM (B series: Monthly external trade of the EEC).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External Trade Statistical Yearbook (Series A)*".

External trade statistics are also available on line via the Eurostat data banks (Comext).

The catalogue of Eurostat publications and a detailed methodological description can be found in "*External Trade Statistics User's Guide*" published in all the Community languages.

2. Sources

Since 1978, the Member States have transmitted Community external trade statistics according to a uniform methodology laid down by Council Regulation (EEC) No 1736/75. This regulation was amended to take account of the new developments in 1988, i.e. the introduction of the new external trade classification entitled "Combined Nomenclature" (CN) and the new "Single Administrative Document".

The tables in this bulletin are compiled by Eurostat from the detailed data transmitted on magnetic tape by the Member States; these data are broken down according to the eight-digit subheadings of the Combined Nomenclature.

Eurostat wishes to take this opportunity of thanking the relevant departments in the Member States for their cooperation, which enables it to compile these harmonized Community statistics and to ensure their quality.

3. Coverage

The results of the Community statistics relate to special trade. This comprises:

- 1) imports of goods placed in free circulation on their arrival at or on leaving warehouses, imports for inward processing and imports after outward processing (customs procedures);
- 2) exports of Community goods, exports after inward processing and exports for outward processing (customs procedures).

Transit and warehousing traffic are not covered by Community statistics.

4. Statistical territory

The statistical territory of the Community comprises the customs territory of the Community excluding the French overseas departments. Thus Greenland, the Canary Islands and Ceuta and Melilla are not covered, while the Azores and Madeira for Portugal and the Balearics for Spain are.

From October 1990, the external trade data of the Federal Republic of Germany, the other Member States and EUR 12 relate to the Federal Republic of Germany in its borders after 3 October 1990.

5. *Goods classification*

In this publication the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of correspondence tables drawn up by Eurostat on the basis of the Combined Nomenclature (CN).

6. *Trading partners: countries and economic areas*

The Community results are broken down by country of origin, country of consignment and country of destination in accordance with the "Country nomenclature for statistics on Community external trade and trade between its Member States", referred to as the Geonomenclature (Geonom).

When goods that originate in third countries and are not in free circulation in the Community are imported, Community statistics state the country of origin. When such goods are exported, the country of destination is specified.

7. *Units*

Values

The statistical value of goods on import is equal to the customs valuation or to a value determined by reference to the concept of customs valuation (in the case, for example, of imports from other Member States). It is the CIF value (cost, insurance, and freight).

The statistical value of goods on export is equal to their value at the place and time at which they leave the statistical territory of the exporting Member State. It is the FOB value (free on board).

The value is expressed in European units of account (ecus). The ecu is a "basket" currency unit based on the market exchange rates of a certain quantity of each Community currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-Community trade balance. The rates used in this bulletin are averages of daily rates. The bulletin contains a table showing the conversion rates used.

Quantity

The statistics give the net weight of the goods.

8. *Confidentiality*

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The relevant legislation, the procedures for implementing it and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data; it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only or to exports only and to only some of the variables recorded (value, statistical procedure, quantities, country, partner, etc.).

Measures are taken during collection and during processing by Eurostat to minimise the effect of these headings on the results for the Community as a whole; in particular, trade data on these headings are included at higher levels of aggregation and in the totals.

On the other hand, the statistics are supplied on the strength of customs documents and do not take account of any amendments made by some Member States at the end of the year in drawing up accounts on intergovernmental trade. In view of this, drawing up a trade balance may produce figures that vary sometimes considerably from the official national figures.

9. *Corrections*

Every month the Member States send Eurostat a magnetic tape containing the results for the current month.

In order to correct these results, the Member States also send every month a magnetic tape containing monthly corrections covering the previous 24-month period.

Indices

1. Introduction

Changes over time in the value of trade are influenced by variations in prices and the quantities marketed. Indices are used to measure these two effects. In general, a system of indices is chosen so that the product of the volume index and the price index expresses the value index. Several systems of indices meeting this requirement may be regularly used. The results obtained by using one system will generally be different from those obtained by using another. For various reasons the Member States do not use a common system, and the level of breakdown of their indices by product group and by partner area also varies. Eurostat has therefore devised its own external trade indices which enable it to calculate, for each Member State, Community indices on a strictly comparable basis. These indices may be consulted on the Trend database developed by Eurostat.

2. Sources of data

There are basically two ways of obtaining information on prices: conducting price surveys by directly approaching importers and exporters and using data collected by the customs authorities. At present only customs data are available in all the Member States. Eurostat therefore calculates indices of unit values (values divided by quantities) and uses them as price variation indicators. The computing programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

3. Extreme values

To avoid a number of restrictions involved in using customs data, Eurostat decided to adopt two basic principles in calculating unit value indices: using the most detailed data possible and always bearing in mind that the object of the exercise is to break down variations in value into a "price" component and a "volume" component. Two rules are applied in order to exclude unlikely price movements. The first is that, given the general level of inflation, the price of a product should not be very different from its level a year ago. Any variation of five or more points is regarded as suspect. The second – more restrictive – rule is that the variation in the price of a product in relation to the most recent month for which data are available should not be very different from the average price variation for similar products. Applying these rules prevents extreme variations due to factors that are unconnected with prices and would otherwise distort the unit value index. For products whose unit values are rejected, the variations are taken to be the same as those for similar products.

4. Classification used

The United Nations Standard International Trade Classification (SITC), revised for the third time in 1988, was drawn up on the basis of the Harmonized Commodity Description and Coding System (HS). Using tables of correspondence between the various classifications (Nimexe, Combined Nomenclature and SITC), Eurostat has been able to publish an uninterrupted time series of external trade indices from 1979 to the present.

From 1994 onwards, external trade publications will give indices calculated from 1989 on the basis of the following SITC Rev. 3 aggregates:

TOTAL: all commodities;
0+1: foods, beverages and tobacco;
2+4: crude materials, except fuels;
3: fuels
5+6+7+8: manufactured goods.

By compiling other correspondence tables, Eurostat is able to supply complete time series based on other classifications.

5. *Types of indices and rebasing*

Eurostat calculates Fisher's "ideal" annual chain indices. Since the "basket of goods" marketed at international level varies rapidly over time, the annual chain permits the updating of the index weightings. Each month the changes in unit values in the product groups at detailed level are weighted in order to obtain the changes in unit values in the various major product categories. Since these changes are based on the previous year, a chain of unit values is obtained. The corresponding volume index chain is the ratio of the unit value variation to the variation in value for the month in question compared with the monthly average for the previous year. The indices published each month are calculated by multiplying the above-mentioned chains by the annual indices for the previous year, a fixed reference period having been chosen (at present 1990). The annual unit value chains are obtained by weighting the monthly chains by the volumes, while the annual volume chains are calculated by dividing the annual value variations by the unit value chains.

6. *General comments*

- Only data on normal trade (statistical procedure 1) are used to calculate the unit value indices; however, data on total trade (covering all the statistical procedures) are used to calculate the value indices from which the volume indices are obtained.
- The unit value indices are calculated on the basis of values expressed in ecus.
- For any further information on the methods used to calculate the indices, please refer to Eurostat's specialised publications.

Trends in Community trade

Seasonal Adjustments: Results

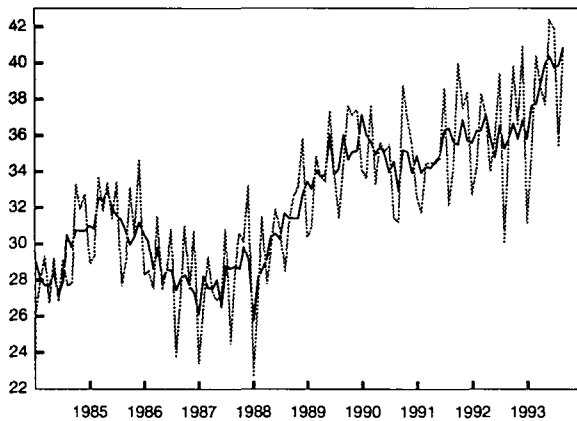

Following a period of relative stability since the middle of 1991, the European Union's exports to the rest of the world, corrected for seasonal variations, have risen steeply since the start of 1993 (+9.4% for the first nine months of the year compared with the same period of 1992). The figure for September 1993 was 2.4% up on the August total.

After an extremely uncertain start to the year, recent movements in the seasonally-adjusted data on the European Union's imports from the rest of the world seem to indicate an

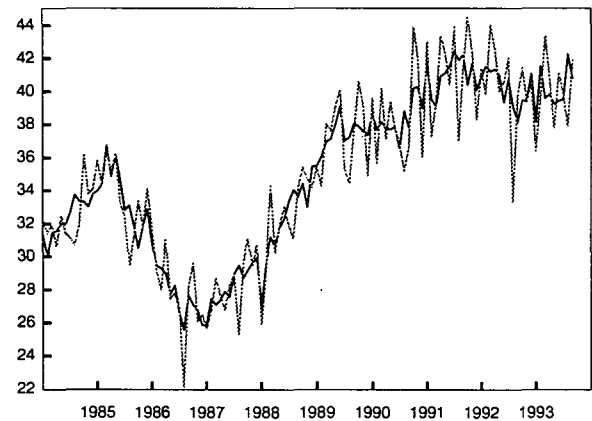

upturn. The fall in September 1993 (-3.5% compared with the previous month) should be viewed in relation to the exceptionally high August figure.

The Union's seasonally-adjusted trade balance has fluctuated sharply around a general tendency towards improvement since the beginning of 1992. After the August deficit, its balance with the rest of the world was in surplus again in September 1993 (+ ECU 0.1 billion).

GLOBAL TRENDS IN EXTERNAL TRADE

EUROPEAN UNION EXTERNAL TRADE: Results for September 1993.

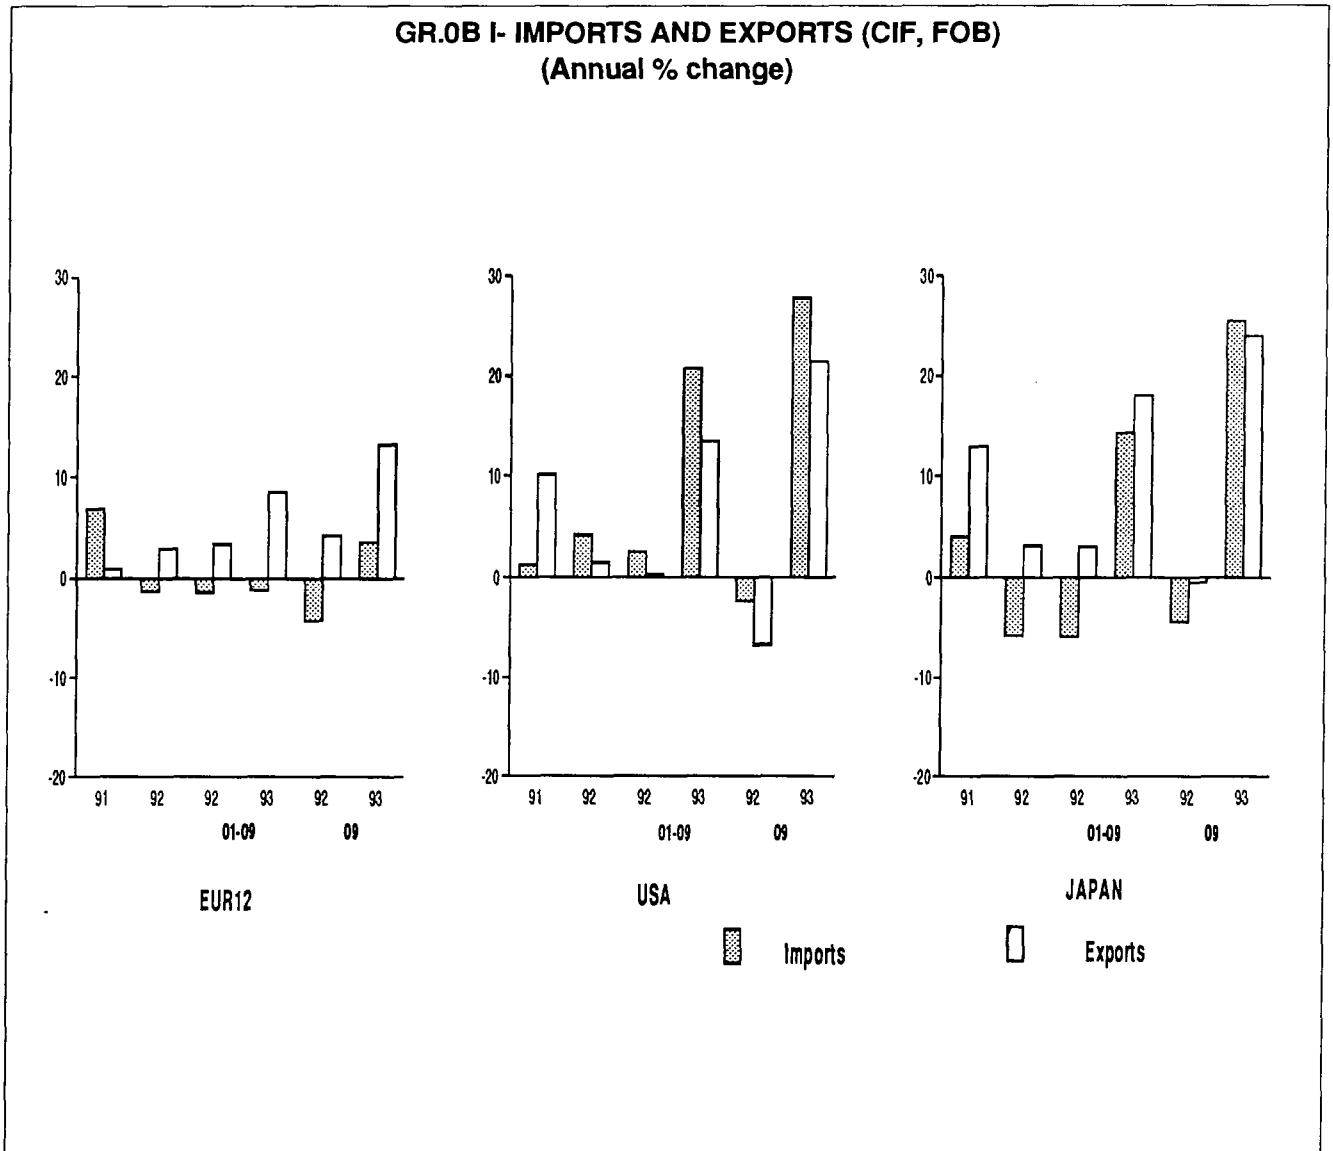

If the first nine months of 1992 are compared with the same period of 1993, exports rose faster than imports by 10 points in the European Union and 4 points in Japan, while in the United States the rate of increase for exports was 7 points lower than for imports.

The deficit in the external trade of the **European Union** for the first nine months of 1993 was ECU 14.2 billion, less than a third of the level for January-September 1992 (ECU -45.4 billion). Imports into the Union fell slightly, by 1.2%, between the two periods. Goods exported outside the Union were 8.5% up from their cumulative level in the first three quarters of 1992.

The **United States** recorded a cumulative deficit of almost ECU 86 billion for January-September 1993, 30 billion worse than in the same period of 1992. US

imports were up by 20.7% in ecus and by 9.2% in dollars; exports were up by 13.4% in ecus and by 3% in dollars.

Japan showed a surplus of ECU 75.4 billion for January-September 1993, almost 16 billion more than in the equivalent period of 1992. Japan's exports were 18% up in ecus and 6.8% up in dollars, but down by 3.6% in yen. Imports were up by 14.2% in ecus and by 3.4% in dollars, but 8.5% down in yen.

GLOBAL TRENDS IN EXTERNAL TRADE

MEMBER STATES' EXTERNAL TRADE: Results for September 1993. Germany and Italy recorded the largest cumulative surpluses for January-September 1993, at ECU 12 and 6 billion respectively.

Italy's balance of trade improved by around ECU 6 billion between January-September 1992 and the same period in 1993. Its exports, bolstered by the devaluation of the lira, grew by 13.3%. Italy's imports from outside the European Union were 6.4% down.

Germany recorded an external trade surplus in January-September 1993 that was some ECU 7 billion higher than in the equivalent period of the previous year. Imports were down by 0.7% while exports were up by 5.8%.

Spain, the BLEU and the Netherlands each reduced their external-trade deficits by approximately ECU 4 billion. Spain's imports from outside the European Union were down by 16.8%, the prices of goods having been pushed up by the devaluation of the peseta, which also helped to boost exports by 13.6%. The BLEU and the Netherlands saw sharp increases, of 18.6% and 16.4% respectively, in their extra-EU exports between the first nine months of 1992 and 1993; their extra-EU imports were down by 5.2% and 2.5% respectively.

Denmark and France each registered an external-trade surplus more than ECU 0.6 billion higher than in the period January-September 1992. Denmark's exports were up by 4.8%, but imports were down by 2.4%. France's imports and exports were both slightly down (by 1.5% and 0.5%).

The **United Kingdom's** deficit was almost ECU 16 billion for the first nine months of 1993, half a billion less than in the corresponding period of 1992. Its exports were up by 11.4% and imports by 7.7%.

Portugal's external-trade deficit was ECU 0.2 billion down in January-September 1993. Its trade with countries outside the Union was well down in ecu terms: imports by 12.8% and exports by 14.2%.

Ireland's balance was close to its level in the first nine months of 1992, but both imports and exports increased sharply, by 35% and 32% respectively.

Greece's cumulative deficit in January-September 1993 represented a slight improvement of ECU 0.2 billion. Greek imports from outside the European Union in the period concerned were up by 11.8% while its exports rose by 23.5%.

**EUROPEAN UNION EXTERNAL TRADE BY PARTNER COUNTRY:
Results for September 1993. EU exports to most partners increased between
the first nine months of 1992 and 1993, but those to EFTA were down by 3.1%
and those to the OPEC countries by 3.6%.**

Half of the drop in the external-trade deficit of the European Union between the first nine months of 1992 and those of 1993 is due to a recovery in its trade balance with the **industrialized countries**. Its deficit with this group of countries for January-September 1993 amounted to ECU 22.7 billion, of which 19.3 billion was attributable to trade with Japan. The deficit with the United States and Canada was down by ECU 7.5 billion and that with Japan by 4.1 billion. Trade with the EFTA countries was in deficit by some ECU 3 billion in both January-September 1992 and 1993. The EU trade surplus with the remaining countries of western Europe was up by ECU 3.3 billion.

European Union imports from the industrialized countries were 4.7% down from their level in the first nine months of 1992. Imports from the EFTA countries were down by 3.1% and those from the United States by an average of 2.8% in the first three quarters of 1993. Imports from Japan were down by 9.1%, prices having risen because of the yen-ecu exchange rate. EU exports to the industrialized countries rose by 3.6% between the first nine months of 1992 and the same period in 1993, boosted by exports to the United States and Canada (+ 9.2%), which increased appreciably in the second and third quarters of 1993 with the help of the rise of the dollar against the ecu. Exports to the EFTA countries were 3.1% down in January-September 1993, but those to Japan were 3.8% up on average for these first three quarters, helped by the rise of the yen against the ecu in the second and third quarters of 1993. EU exports to the other countries of western Europe soared by nearly 20% between January-September 1992 and 1993.

The EU trade surplus with the **developing countries** was over ECU 14 billion in January-September 1993, compared to 3 billion in the corresponding period of 1992. The improvement was largely due to trade with the Mediterranean countries, which recorded a surplus of ECU 9.2 billion, some 7 billion more than in the first nine months of 1992. The trade balances with

the ACP countries and those of Latin America, which had been in the red in January-September 1992, moved into the black in the same period of 1993, with improvements of ECU 4.5 and 2.8 billion respectively. The EU's trade balance with the OPEC countries was more or less in equilibrium, at ECU -0.2 billion, in the first nine months of 1993 - an improvement of ECU 1 billion.

European Union imports from the developing countries were 2% down between January-September 1992 and 1993. Imports from the OPEC countries were down 6.4%. The cost of the EU's crude oil supplies expressed in dollars per barrel fell from May 1993 onwards, partly because of the dollar-ecu exchange rate. Imports from the Mediterranean countries were down by 8% and those from Latin America by almost 12%. Imports from the ACP countries were nearly 23% down. Only imports from the Asian NICs rose, by 4.5% compared with the cumulative total for the first nine months of 1992.

Exports to the developing countries increased by 8% between January-September 1992 and 1993, boosted by those to the Asian NICs (+20%) and the Mediterranean countries (+14.2%). Trade with Latin America contributed to this growth in exports, increasing by 16.6%. Exports to the OPEC and ACP countries were down by 3.6% and 2.6% respectively.

The trade balance with the **countries of Central and Eastern Europe** showed a surplus for the first nine months of 1993: ECU 1.1 billion compared to a deficit of 1.4 billion the year before. EU imports from these countries were up by 7.4%, while exports to them rose sharply (by 17.7%).

The European Union's trade deficit with **China** declined by ECU 1.5 billion to 6.3 billion in January-September 1993. Imports from China grew by 16.7%, while exports from the EU to China shot up by 78.1% between January-September 1992 and the same period in 1993.

**EUROPEAN UNION EXTERNAL TRADE BY PRODUCT:
Results for September 1993. Increase of nearly 11% in exports of machinery
and transport equipment (SITC 7) between the first nine months of 1992
and the same period of 1993.**

Exports of **machinery and transport equipment (SITC 7)** showed a cumulative surplus of close to ECU 35 billion for January-September 1993, compared to 21.3 billion for the same period in the previous year. The external-trade balance in **chemicals (SITC 5)** was up by some ECU 6 billion, to 21 billion. The deficit in **fuel products (SITC 3)** was almost ECU 35 billion, 5.4 billion less than in January-September 1992. The deficits in crude materials (SITC 2+4) and food etc. (SITC 0+1) each improved by ECU 2.7 billion. The trade balance in food was almost even in January-September 1993, at ECU -0.5 billion. Trade in other manufactured goods (SITC 6+8) recorded a deficit of ECU 13 billion, 0.7 billion less than in the first nine months of 1992.

Imports of **other manufactured goods** were 5.9% up between January-September 1992 and 1993. Imports of machinery and transport equipment and chemicals hardly changed from their 1992 levels. Imports of **fuel products and crude materials** were down appreciably (by 3.7% and 8.2%). Food imports were 5.6% down.

Exports of machinery and transport equipment grew by 10.8% between January-September 1992 and 1993. Exports of other manufactured goods were 7.5% up. Chemical exports showed a marked increase of 14.5%. 4.7% more food etc. was exported by the European Union than in the first nine months of 1992.
