Foreword

1. Introduction

The monthly bulletin on external trade, published by Eurostat in the B series, Short-term trends, sets out to provide within the shortest possible deadlines data on short-term trends in the European Union's external trade. In particular, it contains data on the European Union's trade flows with its trading partners and the various economic areas and a breakdown of this data by major product group. The bulletin also provides an overview, based on data from various international sources, of the place occupied by the European Union in the external trade of its main trading partners and of third countries. Trade flows between Member States are recorded under the Intrastat system and will be published at a later date.

The European Union's external trade statistics at the most detailed classification level are published monthly on CD-ROM (B series: Intra and extra-EU trade).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External Trade Statistical Yearbook (Series A)*".

External trade statistics are also available on line via the Eurostat data banks (Comext).

The catalogue of Eurostat publications and a detailed methodological description can be found in "*External Trade Statistics User's Guide*" published in all languages of the European Union .

2. Sources

Since 1978, the Member States have transmitted European Union external trade statistics according to a uniform methodology laid down by Council Regulation (EEC) No 1736/75. This regulation was amended to take account of the new developments in 1988, i.e. the introduction of the new external trade classification entitled "Combined Nomenclature" (CN) and the new "Single Administrative Document".

The tables in this bulletin are compiled by Eurostat from the detailed data transmitted on magnetic tape by the Member States; these data are broken down according to the eight-digit subheadings of the Combined Nomenclature.

Eurostat wishes to take this opportunity of thanking the relevant departments in the Member States for their cooperation, which enables it to compile these harmonized European Union statistics and to ensure their quality.

3. Coverage

The results of the European Union statistics relate to special trade. This comprises:

- 1) imports of goods placed in free circulation on their arrival at or on leaving warehouses, imports for inward processing and imports after outward processing (customs procedures);
- 2) exports of European Union goods, exports after inward processing and exports for outward processing (customs procedures).

Transit and warehousing traffic are not covered by European Union statistics.

4. Statistical territory

The statistical territory of the European Union comprises the customs territory of the European Union excluding the French overseas departments. Thus Greenland, the Canary Islands and Ceuta and Melilla are not covered, while the Azores and Madeira for Portugal and the Balearics for Spain are.

From October 1990, the external trade data of the Federal Republic of Germany, the other Member States and EUR 12 relate to the Federal Republic of Germany in its borders after 3 October 1990.

5. *Goods classification*

In this publication the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of correspondence tables drawn up by Eurostat on the basis of the Combined Nomenclature (CN).

6. *Trading partners: countries and economic areas*

The results of the European Union are broken down by country of origin, country of consignment and country of destination in accordance with the "Country nomenclature for statistics on European Union external trade and trade between its Member States", referred to as the Geonomenclature (Geonom).

When goods that originate in third countries and are not in free circulation in the European Union are imported, EU statistics state the country of origin. When such goods are exported, the country of destination is specified.

7. *Units*

Values

The statistical value of goods on import is equal to the customs valuation or to a value determined by reference to the concept of customs valuation (in the case, for example, of imports from other Member States). It is the CIF value (cost, insurance, and freight).

The statistical value of goods on export is equal to their value at the place and time at which they leave the statistical territory of the exporting Member State. It is the FOB value (free on board).

The value is expressed in European units of account (ecus). The ecu is a "basket" currency unit based on the market exchange rates of a certain quantity of each European Union currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-EU trade balance. The rates used in this bulletin are averages of daily rates. The bulletin contains a table showing the conversion rates used.

Quantity

The statistics give the net weight of the goods.

8. *Confidentiality*

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The relevant legislation, the procedures for implementing it and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data; it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only or to exports only and to only some of the variables recorded (value, statistical procedure, quantities, country, partner, etc.).

Measures are taken during collection and during processing by Eurostat to minimise the effect of these headings on the results for the European Union as a whole; in particular, trade data on these headings are included at higher levels of aggregation and in the totals.

On the other hand, the statistics are supplied on the strength of customs documents and do not take account of any amendments made by some Member States at the end of the year in drawing up accounts on intergovernmental trade. In view of this, drawing up a trade balance may produce figures that vary sometimes considerably from the official national figures.

9. *Corrections*

Every month the Member States send Eurostat a magnetic tape containing the results for the current month.

In order to correct these results, the Member States also send every month a magnetic tape containing monthly corrections covering the previous 24-month period.

Indices

1. Introduction

Changes over time in the value of trade are influenced by variations in prices and the quantities marketed. Indices are used to measure these two effects. In general, a system of indices is chosen so that the product of the volume index and the price index expresses the value index. Several systems of indices meeting this requirement may be regularly used. The results obtained by using one system will generally be different from those obtained by using another. For various reasons the Member States do not use a common system, and the level of breakdown of their indices by product group and by partner area also varies. Eurostat has therefore devised its own external trade indices which enable it to calculate, for each Member State, European Union indices on a strictly comparable basis. These indices may be consulted on the Trend database developed by Eurostat.

2. Sources of data

There are basically two ways of obtaining information on prices: conducting price surveys by directly approaching importers and exporters and using data collected by the customs authorities. At present only customs data are available in all the Member States. Eurostat therefore calculates indices of unit values (values divided by quantities) and uses them as price variation indicators. The computing programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

3. Extreme values

To avoid a number of restrictions involved in using customs data, Eurostat decided to adopt two basic principles in calculating unit value indices: using the most detailed data possible and always bearing in mind that the object of the exercise is to break down variations in value into a "price" component and a "volume" component. Two rules are applied in order to exclude unlikely price movements. The first is that, given the general level of inflation, the price of a product should not be very different from its level a year ago. Any variation of five or more points is regarded as suspect. The second – more restrictive – rule is that the variation in the price of a product in relation to the most recent month for which data are available should not be very different from the average price variation for similar products. Applying these rules prevents extreme variations due to factors that are unconnected with prices and would otherwise distort the unit value index. For products whose unit values are rejected, the variations are taken to be the same as those for similar products.

4. Classification used

The United Nations Standard International Trade Classification (SITC), revised for the third time in 1988, was drawn up on the basis of the Harmonized Commodity Description and Coding System (HS). Using tables of correspondence between the various classifications (Nimexe, Combined Nomenclature and SITC), Eurostat has been able to publish an uninterrupted time series of external trade indices from 1979 to the present.

From 1994 onwards, external trade publications will give indices calculated from 1989 on the basis of the following SITC Rev. 3 aggregates:

TOTAL: all commodities;
0+1: foods, beverages and tobacco;
2+4: crude materials, except fuels;
3: fuels
5+6+7+8: manufactured goods.

By compiling other correspondence tables, Eurostat is able to supply complete time series based on other classifications.

5. *Types of indices and rebasing*

Eurostat calculates Fisher's "ideal" annual chain indices. Since the "basket of goods" marketed at international level varies rapidly over time, the annual chain permits the updating of the index weightings. Each month the changes in unit values in the product groups at detailed level are weighted in order to obtain the changes in unit values in the various major product categories. Since these changes are based on the previous year, a chain of unit values is obtained. The corresponding volume index chain is the ratio of the unit value variation to the variation in value for the month in question compared with the monthly average for the previous year. The indices published each month are calculated by multiplying the above-mentioned chains by the annual indices for the previous year, a fixed reference period having been chosen (at present 1990). The annual unit value chains are obtained by weighting the monthly chains by the volumes, while the annual volume chains are calculated by dividing the annual value variations by the unit value chains.

6. *General comments*

- Only data on normal trade (statistical procedure 1) are used to calculate the unit value indices; however, data on total trade (covering all the statistical procedures) are used to calculate the value indices from which the volume indices are obtained.
- The unit value indices are calculated on the basis of values expressed in ecus.
- For any further information on the methods used to calculate the indices, please refer to Eurostat's specialised publications.

Trends in European Union trade

SEASONAL ADJUSTMENTS: RESULTS

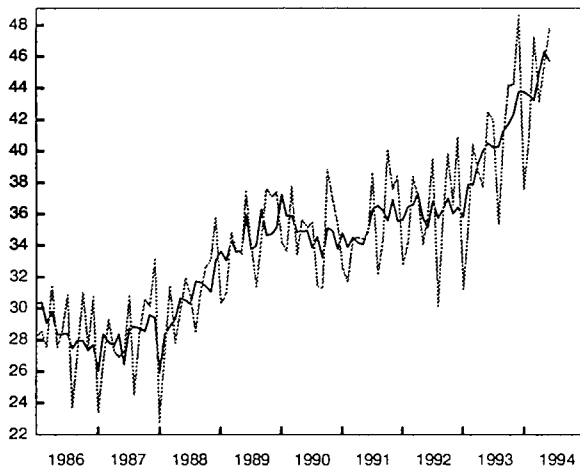

The European Union's exports to the rest of the world, adjusted for seasonal variations, have been on a clear upward trend since April 1994, growing by 15.8% between the first half of 1993 and the first half of 1994. This trend continued into May, when there was a further rise of 2.9%, although a small decline (-1.3%) was recorded in June.

Since the beginning of 1994, the European Union's seasonally adjusted imports from the rest of the world have stabilized at a high level. Month-on-month variations have been slight, e.g. +0.9% in May and +0.1% in June. In the first half of 1994 as a whole,

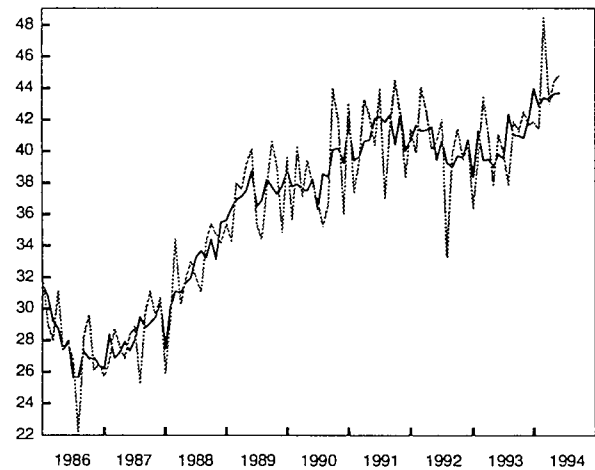

imports rose by nearly 10%, a fact which testifies to the strength of the economic recovery.

For the third month running, the EU's trade with the rest of the world showed a healthy seasonally adjusted surplus. Building on the good result achieved in April (ECU +1.8 billion), the surplus rose to ECU 2.7 billion in May, before declining to ECU 2.0 billion in June. In the first half of the year, the faster growth rate of exports compared with that of imports produced a surplus of ECU 6.7 billion.

GLOBAL TRENDS IN EXTERNAL TRADE

EUROPEAN UNION EXTERNAL TRADE : Results for May 1994 (*)

European Union exports increased more than imports during the first five months of 1994 (+3 percentage points). In the same period imports of United States and Japan showed a rate of change larger than exports by 4.8 and 1.2 points respectively.

European Union external trade deficit recorded an ECU 4.6 billion decrease in the first five months of 1994 compared to the same period in 1993.

This result is due to the extra-EU exports' rapid increase (+14.1% between the two periods) while, at the same time, imports went up by 11.1%.

The **United States** showed a trade balance deterioration both in ECU and in US dollar terms. From January to May 1994 the US trade deficit went up to ECU 51.2 billion (US dollars 58.1 billion). In the same period a year earlier this figure was ECU 37.1 billion (US dollars 44.6 billion).

In ECU terms, the percentage change of the trade flows between the first five months of 1993 and 1994 was respectively 16.7% for imports and 11.9% exports.

The **Japanese** trade balance surplus enhanced to ECU 45.4 billion, compared to ECU 41.1 billion recorded in the same period of 1993.

Although the imports' and exports' rates of change, if considered in ECU, are positive (respectively 14.1% and 12.9%); both flows, due to the appreciation of Yen, decreased by 3.3% and 4.9% respectively if expressed in the Japanese currency.

(*) These figures should be regarded with caution, due to the introduction of the INTRASTAT system in beginning of 1993.

GLOBAL TRENDS IN EXTERNAL TRADE

EXTERNAL TRADE BY EU MEMBER STATES: Results for May 1994

Germany showed an ECU 8.5 billion trade surplus during the period from January to May 1994 (ECU 3.1 billion in the last month), the largest among the EU countries. In the same period the United Kingdom registered the most considerable extra-EU trade deficit reaching ECU 9.7 billion.

As far as the trade balance is concerned Italy was the EU country that showed the most important improvement in the first five months of 1994: its extra-EU surplus soared to ECU 4.3 billion from ECU 1.4 billion recorded in the same period of 1993. This result is mainly due to the rapid increase of Italian exports (+15.4% compared to a year earlier) while the imports went up by 4.4% only.

In May 1994 Germany registered a considerable trade surplus (ECU 3.1 billion) which enhanced its extra-EU position for the first five months of 1994 to ECU 8.5 billion (the largest surplus among the EU countries). Imports and exports showed respectively a 9.4% and 12.3% increase compared to the corresponding period of the previous year.

France's extra-EU trade surplus slightly improved in the above mentioned period this year and a year earlier (from ECU 2.1 billion in 1993 to ECU 2.6 billion in 1994). Both imports and exports recorded rates of change well under the EU average (6.6% and 7.9% respectively).

Ireland and Denmark both experienced small trade surpluses (ECU 0.3 billion and ECU 0.8 billion respectively) showing marginal changes compared to 1993.

During the period January-May 1994 Irish exports recorded an important rate of growth compared to the same period a year earlier (22.4%), while Denmark recorded a lower one (12.2%). On the imports side these rates were respectively 21.9% and 14.4%.

The United Kingdom was the EU country that experienced the largest trade deficit in the period January-May 1994 which reached ECU 9.7 billion.

The UK's trade position showed a slight deterioration (ECU 0.2 billion) with reference to 1993 even if it recorded a positive gap between the exports and imports growth rates (+3.8 points).

In the same period the Dutch deficit increased to ECU 8.1 billion compared to the 1993's ECU 5.9 billion. The Netherlands experienced in the first five months of 1994 import and export rates of change of 23.9% and 17.1% respectively.

Between the periods January-May 1993-1994 Spain and the BLEU improved their trade deficits by nearly the same amount (ECU 0.4 and ECU 0.6 billion respectively). Both countries showed a fast growth rate of their extra-EU exports (12.1% and 30.8%) well over the imports' rate of change (5.6% and 23.5% respectively).

Portugal and Greece registered the same external trade deficit for the first five months of 1994 which totaled ECU 1.3 billion. As for Portugal this result represents an ECU 0.1 billion erosion compared to the previous year, while the Greek deficit improved by ECU 0.3 billion. During the period January-May 1994 Portuguese extra-EU imports increased more rapidly (8.8% growth rate) than exports (5.6%). In the same period Greek imports dropped by 2.4% while extra-EU exports showed a 19.7% increase.

EUROPEAN UNION EXTERNAL TRADE BY PARTNER COUNTRY

TRADE IN TERMS OF VALUE: Results for May 1994

In the first five months of 1994 the EU trade deficit with industrialized countries showed an improvement of ECU 4 billion compared to the same period a year earlier. The EU surplus with developing countries went up to ECU 8.1 billion while the deficit with China increased by ECU 0.6 billion between these two periods.

During the period January-May 1994 the EU trade flows with **industrialized countries** recorded an ECU 10.7 billion deficit compared to the ECU 14.7 billion showed in the same period of 1993.

The deficit with the United States and Canada went down to ECU 1.2 billion (against ECU 3.9 billion recorded a year earlier), while the traditionally high deficit with Japan showed a slight reduction from ECU 11.4 billion to ECU 10.2 billion. The trade deficit with the EFTA countries recorded an ECU 1.2 billion increase in the first five months of 1994, reaching ECU 2.4 billion.

EU trade surplus with **developing countries** went up to ECU 8.1 billion from ECU 7.3 billion between the periods January-May 1993 and 1994. While the EU registered surpluses with the Mediterranean Countries (ECU 5.5 billion), the Asian Newly Industrialized Countries (ECU 2.5 billion) and Latin America (ECU 0.4 billion), the EU trade balance showed a ECU 1.8 billion deficit with the ACP and ECU 1 billion with the OPEC countries.

As far as the **Central and Eastern European countries** are concerned, in the first five months of 1994 the EU trade balance recorded a ECU 0.6 billion surplus (it was nearly the same amount a year earlier), while in the same period the deficit with China went up to ECU 3.9 billion from ECU 3.3 billion recorded in 1993.

EU **imports** from the industrialized countries, which in 1993 represented 57.4% of the total extra-union imports, during the first five months of 1994 showed a 9.7% increase compared to the same period a year earlier. While the imports from the United States and Canada and from EFTA recorded an increase above the average (12.3% and 11.8% respectively) the EU imports from Japan rose by 2% only. Central and Eastern European countries are becoming increasingly important trading partners for the European Union. The EU imports from these countries, which in 1993 globally represented 8% of total extra-EU imports, in the first five months of 1994 showed a rate of change on the previous year of well over the average (19.5%).

As for China the European Union imports increased by 22.9% compared to the same period of 1993.

Imports from developing countries consolidated the recovery started in 1994: in the period January-May the growth rate of the EU imports from these countries went up by 10.9%. The EU import flows from ACP and Latin America countries recorded the most dynamic rates of change (28.3% and 22.2% respectively), while imports from Asian Newly Industrialized (9.2%) and Mediterranean countries (6.5%) showed less significant performances. EU imports from OPEC countries dropped by 3.2%, reflecting the fall in international oil prices: in this period the ECU cost of the EU's crude oil supplies went down by 12.5% (17.2% if measured in US dollar).

In the period January-May 1994 **exports** from the EU to the industrialized third countries went up by 15.2% compared to the same period of 1993. This result is mainly due to the good performance of EU exports to the United States and Canada (21.3%) and to Japan (18.5%), while exports to EFTA countries registered a 9.9% increase.

The EU exports flow to Central and Eastern European countries, which in 1993 represented 8.6% of total EU exports, recorded a rate of change in the first five months of 1993 and 1994 of well over the EU average (20.2%).

During the same period, exports to China (representing 2.3% of total EU exports) recorded the highest rate of growth (25.3%); while the global value of the exports to the developing countries showed a more moderate increase (10.8%).

While exports to the Asian NICs and to the Latin American countries both recorded a rate of change of nearly 23%, the EU exports to OPEC and ACP countries went down of 5.3% and 15.6% respectively.

EUROPEAN UNION EXTERNAL TRADE BY PRODUCT

TRADE IN TERMS OF VALUE: Results for May 1994

During the first five months of 1994 EU trade in machinery and transport equipment recorded the largest surplus (ECU 22 billion), while the fuel products showed the most considerable deficit (ECU 19 billion).

The EU surplus in **machinery and transport equipment (SITC 7)** went up ECU 4.4 billion between the first five months of 1993 and 1994, reaching ECU 22 billion.

In this period also the **chemical products (SITC 5)** saw their surplus enhanced to ECU 12.1 billion (compared to ECU 10.9 billion registered one year earlier).

The EU trade deficit in **fuel products (SITC 3)** improved by ECU 1.6 billion compared to the same period a year earlier, while the deficit for **other manufactured goods (SITC 6+8)** went down to ECU 5.2 billion from ECU 6 billion.

Both EU trade deficits in **food, beverage and tobacco (SITC 0+1)** and **raw material except fuel (SITC 2+4)** showed a deterioration during the first five months of 1994 of ECU 0.8 billion and ECU 2.4 billion respectively compared to 1993.

As for the **import flows**, all manufactured products aggregated by SITC sections registered during the period January-May 1994 relatively strong rates of change. These rates were 16.8% for the chemicals, 12.8% for the other manufactured goods and 11.7% for the machinery and transport equipment.

Among the primary products, which in 1993 represented 27% of the total extra-EU imports, the raw materials except fuel (SITC 2+4) were the sections that recorded the highest growth rate (22.6%), followed by the food, beverage and tobacco with 15.1% rate of change.

The imports of fuel products showed in the first five months of 1994 a negative percentage change compared to the corresponding period of the previous year (-4.8%), mainly due to the above mentioned reduction in international oil price.

The EU **exports** of machinery and transport equipment, which in 1993 represented 42.6% of the total exports, rose by 14.7% between the first five months of 1993 and 1994; during the same period the other manufactured goods (SITC 6+8) recorded a 15.6% increase, while the chemicals products showed a rate of change of 14.5%.

The SITC sections grouping the primary products (which in 1993 totaled less than 13% of the EU exports) registered rates of changes under the average: respectively food, beverage and tobacco 10.3%, raw materials other than fuel 12.1% and fuel products 5.3%.
