Foreword

1. Introduction

The monthly bulletin on external trade, published by Eurostat in the B series, Short-term trends, sets out to provide within the shortest possible deadlines data on short-term trends in the European Union's external trade. In particular, it contains data on the European Union's trade flows with its trading partners and the various economic areas and a breakdown of this data by major product group. The bulletin also provides an overview, based on data from various international sources, of the place occupied by the European Union in the external trade of its main trading partners and of third countries. Trade flows between Member States are recorded under the Intrastat system and will be published at a later date.

The European Union's external trade statistics at the most detailed classification level are published monthly on CD-ROM (B series: Intra and extra-EU trade).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External Trade Statistical Yearbook (Series A)*".

External trade statistics are also available on line via the Eurostat data banks (Comext).

The catalogue of Eurostat publications and a detailed methodological description can be found in "*External Trade Statistics User's Guide*" published in all languages of the European Union .

2. Sources

Since 1978, the Member States have transmitted European Union external trade statistics according to a uniform methodology laid down by Council Regulation (EEC) No 1736/75. This regulation was amended to take account of the new developments in 1988, i.e. the introduction of the new external trade classification entitled "Combined Nomenclature" (CN) and the new "Single Administrative Document".

The tables in this bulletin are compiled by Eurostat from the detailed data transmitted on magnetic tape by the Member States; these data are broken down according to the eight-digit subheadings of the Combined Nomenclature.

Eurostat wishes to take this opportunity of thanking the relevant departments in the Member States for their cooperation, which enables it to compile these harmonized European Union statistics and to ensure their quality.

3. Coverage

The results of the European Union statistics relate to special trade. This comprises:

- 1) imports of goods placed in free circulation on their arrival at or on leaving warehouses, imports for inward processing and imports after outward processing (customs procedures);
- 2) exports of European Union goods, exports after inward processing and exports for outward processing (customs procedures).

Transit and warehousing traffic are not covered by European Union statistics.

4. Statistical territory

The statistical territory of the European Union comprises the customs territory of the European Union excluding the French overseas departments. Thus Greenland, the Canary Islands and Ceuta and Melilla are not covered, while the Azores and Madeira for Portugal and the Balearics for Spain are.

From October 1990, the external trade data of the Federal Republic of Germany, the other Member States and EUR 12 relate to the Federal Republic of Germany in its borders after 3 October 1990.

5. *Goods classification*

In this publication the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of correspondence tables drawn up by Eurostat on the basis of the Combined Nomenclature (CN).

6. *Trading partners: countries and economic areas*

The results of the European Union are broken down by country of origin, country of consignment and country of destination in accordance with the "Country nomenclature for statistics on European Union external trade and trade between its Member States", referred to as the Geonomenclature (Geonom).

When goods that originate in third countries and are not in free circulation in the European Union are imported, EU statistics state the country of origin. When such goods are exported, the country of destination is specified.

7. *Units*

Values

The statistical value of goods on import is equal to the customs valuation or to a value determined by reference to the concept of customs valuation (in the case, for example, of imports from other Member States). It is the CIF value (cost, insurance, and freight).

The statistical value of goods on export is equal to their value at the place and time at which they leave the statistical territory of the exporting Member State. It is the FOB value (free on board).

The value is expressed in European units of account (ecus). The ecu is a "basket" currency unit based on the market exchange rates of a certain quantity of each European Union currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-EU trade balance. The rates used in this bulletin are averages of daily rates. The bulletin contains a table showing the conversion rates used.

Quantity

The statistics give the net weight of the goods.

8. *Confidentiality*

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The relevant legislation, the procedures for implementing it and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data; it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only or to exports only and to only some of the variables recorded (value, statistical procedure, quantities, country, partner, etc.).

Measures are taken during collection and during processing by Eurostat to minimise the effect of these headings on the results for the European Union as a whole; in particular, trade data on these headings are included at higher levels of aggregation and in the totals.

On the other hand, the statistics are supplied on the strength of customs documents and do not take account of any amendments made by some Member States at the end of the year in drawing up accounts on intergovernmental trade. In view of this, drawing up a trade balance may produce figures that vary sometimes considerably from the official national figures.

9. *Corrections*

Every month the Member States send Eurostat a magnetic tape containing the results for the current month.

In order to correct these results, the Member States also send every month a magnetic tape containing monthly corrections covering the previous 24-month period.

Indices

1. Introduction

Changes over time in the value of trade are influenced by variations in prices and the quantities marketed. Indices are used to measure these two effects. In general, a system of indices is chosen so that the product of the volume index and the price index expresses the value index. Several systems of indices meeting this requirement may be regularly used. The results obtained by using one system will generally be different from those obtained by using another. For various reasons the Member States do not use a common system, and the level of breakdown of their indices by product group and by partner area also varies. Eurostat has therefore devised its own external trade indices which enable it to calculate, for each Member State, European Union indices on a strictly comparable basis. These indices may be consulted on the Trend database developed by Eurostat.

2. Sources of data

There are basically two ways of obtaining information on prices: conducting price surveys by directly approaching importers and exporters and using data collected by the customs authorities. At present only customs data are available in all the Member States. Eurostat therefore calculates indices of unit values (values divided by quantities) and uses them as price variation indicators. The computing programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

3. Extreme values

To avoid a number of restrictions involved in using customs data, Eurostat decided to adopt two basic principles in calculating unit value indices: using the most detailed data possible and always bearing in mind that the object of the exercise is to break down variations in value into a "price" component and a "volume" component. Two rules are applied in order to exclude unlikely price movements. The first is that, given the general level of inflation, the price of a product should not be very different from its level a year ago. Any variation of five or more points is regarded as suspect. The second – more restrictive – rule is that the variation in the price of a product in relation to the most recent month for which data are available should not be very different from the average price variation for similar products. Applying these rules prevents extreme variations due to factors that are unconnected with prices and would otherwise distort the unit value index. For products whose unit values are rejected, the variations are taken to be the same as those for similar products.

4. Classification used

The United Nations Standard International Trade Classification (SITC), revised for the third time in 1988, was drawn up on the basis of the Harmonized Commodity Description and Coding System (HS). Using tables of correspondence between the various classifications (Nimexe, Combined Nomenclature and SITC), Eurostat has been able to publish an uninterrupted time series of external trade indices from 1979 to the present.

From 1994 onwards, external trade publications will give indices calculated from 1989 on the basis of the following SITC Rev. 3 aggregates:

TOTAL: all commodities;
0+1: foods, beverages and tobacco;
2+4: crude materials, except fuels;
3: fuels
5+6+7+8: manufactured goods.

By compiling other correspondence tables, Eurostat is able to supply complete time series based on other classifications.

5. *Types of indices and rebasing*

Eurostat calculates Fisher's "ideal" annual chain indices. Since the "basket of goods" marketed at international level varies rapidly over time, the annual chain permits the updating of the index weightings. Each month the changes in unit values in the product groups at detailed level are weighted in order to obtain the changes in unit values in the various major product categories. Since these changes are based on the previous year, a chain of unit values is obtained. The corresponding volume index chain is the ratio of the unit value variation to the variation in value for the month in question compared with the monthly average for the previous year. The indices published each month are calculated by multiplying the above-mentioned chains by the annual indices for the previous year, a fixed reference period having been chosen (at present 1990). The annual unit value chains are obtained by weighting the monthly chains by the volumes, while the annual volume chains are calculated by dividing the annual value variations by the unit value chains.

6. *General comments*

- Only data on normal trade (statistical procedure 1) are used to calculate the unit value indices; however, data on total trade (covering all the statistical procedures) are used to calculate the value indices from which the volume indices are obtained.
- The unit value indices are calculated on the basis of values expressed in ecus.
- For any further information on the methods used to calculate the indices, please refer to Eurostat's specialised publications.

Trends in European Union trade

SEASONAL ADJUSTMENTS: RESULTS

In spite of the downturn in July 1994 (-6.6% compared with the previous month), the seasonally-adjusted figures for the European Union's exports to the rest of the world continued to reflect the upward trend which had begun at the start of 1993. This was borne out by the figures for August (+7.9%), and for the first eight months of the year the increase was as much as 14.2%.

Since the start of 1994 the seasonally-adjusted figures for the European Union's imports from the rest of the world have remained stable at a high

level. Fluctuations were only slight: +0.2% in July and +0.5% in August 1994 (compared with the previous months). On the other hand, the change in relation to 1993 was more marked, with a growth rate of 9.3% since the beginning of the year.

As a result of a better export performance, the European Union's seasonally-adjusted trade balance recorded a surplus of ECU 7 000 million since the start of the year. The July deficit of ECU 1 400 million was offset by a solid performance in August, when a surplus of ECU 1 500 million was recorded.

GLOBAL TRENDS IN EXTERNAL TRADE

EUROPEAN UNION EXTERNAL TRADE : Results for August 1994

European Union's exports increased more than imports during the first eight months of 1994 (+2.5 percentage points). In the same period imports of United States and Japan showed a rate of change larger than exports by 3.8 and 2 points respectively.

The *European Union's* trade deficit fell to ECU 1.9 billion in the first eight months of 1994 from ECU 8.6 a year earlier. The trade balance recovery is mainly due to the dynamic of the extra-EU exports that increased by 12.5% in the first eight months of 1994 compared to the same period in 1993 while, at the same time, imports went up by 10%.

From January to August 1994 the *United States'* trade deficit recorded an ECU 20.4 billion increase compared to the same period in 1993, reaching ECU 94.2 billion (US dollars 110.2 billion). The percentage change of the trade flows between the first eight months of 1993 and 1994 in ECU terms was 14.4% for imports and 10.6% for exports; if measured in US dollars these figures were respectively 12.7% and 8.7%.

The *Japanese* trade surplus went up to ECU 70.7 billion in the first eight months of 1994, compared to ECU 67.1 billion recorded in the same period of 1993. This result is mainly explained by the appreciation of the YEN (11% against the ECU). As a matter of fact, if measured in the Japanese currency, the surplus showed a reduction (YEN 0.6 billion) between these two periods, mainly due to the negative rate of growth of exports (-1.8%) while imports grew only by 0.5%. In ECU terms the rates of change of exports and imports were both positive: respectively 9.7% and 11.7%.

GLOBAL TRENDS IN EXTERNAL TRADE

EXTERNAL TRADE BY MEMBER STATES: Results for August 1994

In the first eight months of 1994 Germany and the United Kingdom registered respectively the largest surplus (ECU 16 billion) and deficit (ECU 14.1 billion) among the EU countries.

In the period January-August 1994 the *United Kingdom* was the EU country that experienced the largest trade deficit which reached ECU 14.1 billion. The UK's trade position showed a slight improvement (ECU 0.2 billion) with reference to the same period of 1993 due to the positive gap between the exports' and imports' growth rates (+3.1 points).

The *Netherlands'* extra-EU imports (including goods consigned to other member states via Dutch harbours) grew very fast in the first eight months of 1994 (+20.7%) while the exports' rate of change was under the EU average (11.4%). In the same period the Dutch extra-EU deficit increased to ECU 12.7 billion compared to 1993's ECU 9.1 billion.

During the period January to August 1994 the *BLEU's* and *Ireland's* extra-EU trade recorded the largest rates of growth among the EU member states compared to the same period a year earlier. Imports of both countries registered a percentage change of 23.2%, while the BLEU's exports grew by 24.1% and the Irish by 19.3%. The external trade position of these two countries remained unchanged compared to the same period in 1993: in both years the BLEU recorded an ECU 0.7 billion deficit, while Ireland showed a surplus of nearly the same amount (ECU 0.6 billion).

The extra-EU trade surplus of *Germany* (the largest among the EU countries) soared to ECU 16 billion compared to ECU 10.8 billion registered in 1993. In the period January-August 1994 German exports showed a 13.3% increase compared to the corresponding period of the previous year, while imports grew only by 9.2%.

During the first eight months of 1994 the *Italian* exports increased faster than imports compared to the same period a year earlier, respectively 13.2% and 6.2% growth rate. The Italian trade balance improved its surplus by ECU 3.3 billion, reaching ECU 8.6 billion, from ECU 5.3 billion recorded in 1993.

France's extra-EU trade surplus slightly improved between the above mentioned period in 1994 and a year earlier (from ECU 5 billion in 1993 to ECU 5.5 billion in 1994). Both imports and exports recorded rates of change well under the EU average (6.6% and 6.9% respectively).

In the first eight months of 1994 *Denmark* experienced almost the same trade surplus registered in the corresponding period one year earlier (ECU 1.6 billion). Between these two periods Danish imports' and exports' rates of change recorded rather close values: respectively 14.4% and 14% .

Between the periods January-August 1993-1994 *Spain* reduced its trade deficit by ECU 0.3 billion. Spanish extra-EU export showed a rate of change larger than imports by 4.2 points (respectively 11.5% and 7.3%).

In the period January-August 1994 *Greece* and *Portugal* experienced the same trade deficit (ECU 1.9 billion): while Greece improved his external position by ECU 0.8 billion compared to one year earlier, the Portuguese deficit increased by ECU 0.1 billion. Among the EU countries Greece was the only which experienced a negative rate of growth of its imports (-14.2% compared to the previous year) while exports went up of only 4.3%. As for Portugal these percentage changes were respectively 6% and 7.9%.

EUROPEAN UNION EXTERNAL TRADE BY PARTNER COUNTRY

TRADE IN TERMS OF VALUE: Results for August 1994

In the first eight months of 1994 the EU trade deficit with industrialized countries showed an improvement of ECU 6.8 billion compared to the same period a year earlier. At the same time the EU surplus with developing countries went up by ECU 0.8 billion while the deficit with China increased by ECU 1.3 billion.

During the period January-August 1994 the EU trade flows with **industrialized countries** recorded an ECU 10.4 billion deficit compared to ECU 17.2 billion showed in the same period of 1993. The trade with the United States and Canada showed a surplus of ECU 1.1 billion, against a deficit of ECU 1.8 billion recorded a year earlier, while the consistently high deficit with Japan registered an improvement from ECU 17.1 billion to ECU 14.7 billion. As well the trade deficit with the EFTA countries recorded a slight reduction from ECU 2.2 billion to ECU 2.1 billion.

The trade surplus with **developing countries** went up to ECU 14.1 billion from ECU 13.3 billion between the periods January-August 1993 and 1994. While the EU registered surpluses with the Mediterranean Countries (ECU 7.8 billion), the Asian Newly Industrialized Countries (ECU 4.9 billion) and Latin America (ECU 0.6 billion), the extra-EU trade balance showed a deficit of ECU 2.6 billion with both the ACP and the OPEC countries.

As far as the **Central and Eastern European countries** are concerned, in the first eight months of 1994 the EU's trade balance recorded an ECU 0.1 billion surplus (it was ECU 0.7 billion a year earlier), while in the same period the deficit with **China** went up to ECU 6.4 billion from ECU 5.1 billion registered in 1993.

During the first eight months of 1994 EU **imports** from the industrialized countries showed a 8.4% increase compared to the same period a year earlier, when this flows registered a negative growth rate. While imports from the United States and Canada and from EFTA recorded an increase above the EU average (11.3% and 10.7% respectively), the EU imports from Japan rose by 1.2% only. Imports from developing countries consolidated the recovery which started in 1994's first quarter: in the period January-August the EU imports growth rate from these countries was 10.5%. The EU import flows from ACP and Latin America countries recorded the most dynamic rates of change (25% and 23.4% respectively), while imports from Asian Newly Industrialized (7.2%) and Mediterranean countries (8.3%) showed less significant performances.

EU imports from OPEC countries dropped by 1.6%, reflecting the fall in international oil prices: in the first eight months of 1994 the ECU cost of the EU's crude oil supplies went down by 8.4% (9.7% if measured in US dollar) compared to the same period a year earlier. The EU imports from Central and Eastern European countries as well as from China continued the fast-growing trend showed in the last two years: the percentage changes in the period January-August against a year earlier were respectively 21% and 18.7%.

In the period January-August 1994 **exports** from the EU to the industrialized countries went up by 13.4% compared to the same period of 1993. This result is mainly due to the good performance of EU exports to the United States and Canada (16.5%) and to Japan (19.4%), while exports to EFTA countries registered a rate of growth under the average (11.3%). The global value of the exports to the developing countries showed a more moderate increase (9.9%); while exports to the Asian NICs, to the Latin American and to the Mediterranean countries recorded positive rates of change (respectively 21.1%, 20.8% and 6%), the EU exports to OPEC and ACP countries went down by 8.1% and 14.3% respectively. The EU export flows to Central and Eastern European countries recorded a percentage change in the first eight months of 1994 well over the EU average (18.3%), while the exports to China, after the boom experienced in 1993, were still growing although at a more moderate rate (13.4%).

EUROPEAN UNION EXTERNAL TRADE BY PRODUCT

TRADE IN TERMS OF VALUE: Results for August 1994

During the first eight months of 1994 EU trade in machinery and transport equipment recorded the largest surplus (ECU 39.8 billion), while the fuel products showed the most considerable deficit (ECU 31.8 billion).

During the period January-August 1994 the *primary products* (SITC 0-4) huge deficit went up by ECU 4.5 billion compared to the same period in 1993, reaching ECU 51.7 billion.

The EU trade balance in **fuel products (SITC 3)** improved by ECU 0.7 billion, while both deficits in **food, beverages and tobacco (SITC 0+1)** and **raw materials except fuel (SITC 2+4)** showed a deterioration during the first eight months of 1994 respectively of ECU 1.2 billion and ECU 4 billion, compared to the same period a year earlier.

As far as the *manufactured products (SITC 5-8)* are concerned, in the first eight months of 1994, EU external trade registered a surplus of ECU 54.2 billion compared to the ECU 44.3 billion registered in the corresponding period a year earlier.

The EU surplus in **machinery and transport equipment (SITC 7)** increased by ECU 6.5 billion reaching ECU 39.8 billion. As well the **chemical products (SITC 5)** saw their surplus enhanced to ECU 20.9 billion (compared to ECU 18.8 billion registered one year earlier), while the deficit for **other manufactured goods (SITC 6+8)** went down to ECU 6.5 billion from ECU 7.8 billion registered in 1993.

As for the *import flows*, the raw materials except fuel (SITC 2+4) were the sections that recorded the highest growth rate (23.4%), followed by the chemicals (15.5%) and food, beverages and tobacco with 14.2% rate of change. The imports of machinery and transport equipment, and of other manufactured goods showed a more moderate increase: respectively 10.9% and 11.1% compared to the same period a year earlier. The above mentioned reduction in international oil price could explain the negative rate of change (-2.1%) showed by the fuel products in the first eight months of 1994.

On the export side, between the first eight months of 1993 and 1994, the manufactured products aggregated by main SITC sections showed very close rates of change. These rates were +13.5% for the chemicals products, +13.2% for the machinery and transport equipment, while the other manufactured goods (SITC 6+8) recorded a 13.4% increase. In the first eight months of 1994 the SITC sections grouping the primary products registered relatively weak performances compared to the same period a year earlier: respectively food, beverages and tobacco +9.3%, raw materials other than fuel +12.8% and fuel products -1.6%.
