Foreword

1. Introduction

The monthly bulletin on external trade, published by Eurostat in the B series, Short-term trends, sets out to provide within the shortest possible deadlines data on short-term trends in the European Union's external trade. In particular, it contains data on the European Union's trade flows with its trading partners and the various economic areas and a breakdown of this data by major product group. The bulletin also provides an overview, based on data from various international sources, of the place occupied by the European Union in the external trade of its main trading partners and of third countries. Trade flows between Member States are recorded under the Intrastat system and will be published at a later date.

The European Union's external trade statistics at the most detailed classification level are published monthly on CD-ROM (B series: Intra and extra-EU trade).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External Trade Statistical Yearbook (Series A)*".

External trade statistics are also available on line via the Eurostat data banks (Comext).

The catalogue of Eurostat publications and a detailed methodological description can be found in "*External Trade Statistics User's Guide*" published in all languages of the European Union .

2. Sources

Since 1978, the Member States have transmitted European Union external trade statistics according to a uniform methodology laid down by Council Regulation (EEC) No 1736/75. This regulation was amended to take account of the new developments in 1988, i.e. the introduction of the new external trade classification entitled "Combined Nomenclature" (CN) and the new "Single Administrative Document".

The tables in this bulletin are compiled by Eurostat from the detailed data transmitted on magnetic tape by the Member States; these data are broken down according to the eight-digit subheadings of the Combined Nomenclature.

Eurostat wishes to take this opportunity of thanking the relevant departments in the Member States for their cooperation, which enables it to compile these harmonized European Union statistics and to ensure their quality.

3. Coverage

The results of the European Union statistics relate to special trade. This comprises:

- 1) imports of goods placed in free circulation on their arrival at or on leaving warehouses, imports for inward processing and imports after outward processing (customs procedures);
- 2) exports of European Union goods, exports after inward processing and exports for outward processing (customs procedures).

Transit and warehousing traffic are not covered by European Union statistics.

4. Statistical territory

The statistical territory of the European Union comprises the customs territory of the European Union excluding the French overseas departments. Thus Greenland, the Canary Islands and Ceuta and Melilla are not covered, while the Azores and Madeira for Portugal and the Balearics for Spain are.

From October 1990, the external trade data of the Federal Republic of Germany, the other Member States and EUR 12 relate to the Federal Republic of Germany in its borders after 3 October 1990.

5. *Goods classification*

In this publication the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of correspondence tables drawn up by Eurostat on the basis of the Combined Nomenclature (CN).

6. *Trading partners: countries and economic areas*

The results of the European Union are broken down by country of origin, country of consignment and country of destination in accordance with the "Country nomenclature for statistics on European Union external trade and trade between its Member States", referred to as the Geonomenclature (Geonom).

When goods that originate in third countries and are not in free circulation in the European Union are imported, EU statistics state the country of origin. When such goods are exported, the country of destination is specified.

7. *Units*

Values

The statistical value of goods on import is equal to the customs valuation or to a value determined by reference to the concept of customs valuation (in the case, for example, of imports from other Member States). It is the CIF value (cost, insurance, and freight).

The statistical value of goods on export is equal to their value at the place and time at which they leave the statistical territory of the exporting Member State. It is the FOB value (free on board).

The value is expressed in European units of account (ecus). The ecu is a "basket" currency unit based on the market exchange rates of a certain quantity of each European Union currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-EU trade balance. The rates used in this bulletin are averages of daily rates. The bulletin contains a table showing the conversion rates used.

Quantity

The statistics give the net weight of the goods.

8. *Confidentiality*

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The relevant legislation, the procedures for implementing it and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data; it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only or to exports only and to only some of the variables recorded (value, statistical procedure, quantities, country, partner, etc.).

Measures are taken during collection and during processing by Eurostat to minimise the effect of these headings on the results for the European Union as a whole; in particular, trade data on these headings are included at higher levels of aggregation and in the totals.

On the other hand, the statistics are supplied on the strength of customs documents and do not take account of any amendments made by some Member States at the end of the year in drawing up accounts on intergovernmental trade. In view of this, drawing up a trade balance may produce figures that vary sometimes considerably from the official national figures.

9. *Corrections*

Every month the Member States send Eurostat a magnetic tape containing the results for the current month.

In order to correct these results, the Member States also send every month a magnetic tape containing monthly corrections covering the previous 24-month period.

Indices

1. Introduction

Changes over time in the value of trade are influenced by variations in prices and the quantities marketed. Indices are used to measure these two effects. In general, a system of indices is chosen so that the product of the volume index and the price index expresses the value index. Several systems of indices meeting this requirement may be regularly used. The results obtained by using one system will generally be different from those obtained by using another. For various reasons the Member States do not use a common system, and the level of breakdown of their indices by product group and by partner area also varies. Eurostat has therefore devised its own external trade indices which enable it to calculate, for each Member State, European Union indices on a strictly comparable basis. These indices may be consulted on the Trend database developed by Eurostat.

2. Sources of data

There are basically two ways of obtaining information on prices: conducting price surveys by directly approaching importers and exporters and using data collected by the customs authorities. At present only customs data are available in all the Member States. Eurostat therefore calculates indices of unit values (values divided by quantities) and uses them as price variation indicators. The computing programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

3. Extreme values

To avoid a number of restrictions involved in using customs data, Eurostat decided to adopt two basic principles in calculating unit value indices: using the most detailed data possible and always bearing in mind that the object of the exercise is to break down variations in value into a "price" component and a "volume" component. Two rules are applied in order to exclude unlikely price movements. The first is that, given the general level of inflation, the price of a product should not be very different from its level a year ago. Any variation of five or more points is regarded as suspect. The second – more restrictive – rule is that the variation in the price of a product in relation to the most recent month for which data are available should not be very different from the average price variation for similar products. Applying these rules prevents extreme variations due to factors that are unconnected with prices and would otherwise distort the unit value index. For products whose unit values are rejected, the variations are taken to be the same as those for similar products.

4. Classification used

The United Nations Standard International Trade Classification (SITC), revised for the third time in 1988, was drawn up on the basis of the Harmonized Commodity Description and Coding System (HS). Using tables of correspondence between the various classifications (Nimexe, Combined Nomenclature and SITC), Eurostat has been able to publish an uninterrupted time series of external trade indices from 1979 to the present.

From 1994 onwards, external trade publications will give indices calculated from 1989 on the basis of the following SITC Rev. 3 aggregates:

TOTAL: all commodities;
0+1: foods, beverages and tobacco;
2+4: crude materials, except fuels;
3: fuels
5+6+7+8: manufactured goods.

By compiling other correspondence tables, Eurostat is able to supply complete time series based on other classifications.

5. *Types of indices and rebasing*

Eurostat calculates Fisher's "ideal" annual chain indices. Since the "basket of goods" marketed at international level varies rapidly over time, the annual chain permits the updating of the index weightings. Each month the changes in unit values in the product groups at detailed level are weighted in order to obtain the changes in unit values in the various major product categories. Since these changes are based on the previous year, a chain of unit values is obtained. The corresponding volume index chain is the ratio of the unit value variation to the variation in value for the month in question compared with the monthly average for the previous year. The indices published each month are calculated by multiplying the above-mentioned chains by the annual indices for the previous year, a fixed reference period having been chosen (at present 1990). The annual unit value chains are obtained by weighting the monthly chains by the volumes, while the annual volume chains are calculated by dividing the annual value variations by the unit value chains.

6. *General comments*

- Only data on normal trade (statistical procedure 1) are used to calculate the unit value indices; however, data on total trade (covering all the statistical procedures) are used to calculate the value indices from which the volume indices are obtained.
- The unit value indices are calculated on the basis of values expressed in ecus.
- For any further information on the methods used to calculate the indices, please refer to Eurostat's specialised publications.

Trends in European Union trade

SEASONAL ADJUSTMENTS: RESULTS

After a fairly steady improvement from the start of 1993 the seasonally-adjusted figures for the European Union's exports to the rest of the world have been relatively stable since May 1994. The increase recorded in November (+2.6%) could be the start of a renewed upturn even though, since the start of 1994, exports have been performing well, with an average increase of 11.8% compared with 1993.

The seasonally-adjusted figures for the European Union's imports from the rest of

the world have been rising again since the middle of 1994. For the fourth month in a row the increase was equal to or more than 1% (+1.6% in November). Imports were up by 9.8% over the first eleven months of the year.

The European Union's seasonally-adjusted trade balance recorded a surplus of ECU 0.3 billion in November 1994. The trade balance with the rest of the world has shown a sharp rise since 1993, with a surplus of ECU 3.9 billion for the first eleven months of 1994.

GLOBAL TRENDS IN EXTERNAL TRADE

EUROPEAN UNION EXTERNAL TRADE : Results until November 1994.

European Union's exports increased slightly more than imports during the first eleven months of 1994 (+0.4 percentage points). In the same period imports of United States and Japan showed a rate of change larger than exports by 3.8 and 3.3 points respectively.

In November 1994 the **European Union's(*)** external trade balance recorded a surplus of ECU 0.7 billion compared to the ECU 1.4 billion registered in the same month of 1993. Nevertheless the cumulated deficit for January-November 1994 narrowed to ECU 3.6 billion from ECU 4.9 billion registered in the same period a year earlier.

The January-November 1993 and 1994 comparison shows that imports are gaining pace over exports. In fact, while the extra-EU exports increased at almost the same rate registered a year earlier (11.5%), the imports, after the negative result showed in 1993, grew by 11.1%.

From January to November 1994 the **United States'** trade deficit recorded an ECU 27.4 billion increase compared to the corresponding period a year earlier, reaching ECU 138.1 billion (US dollars 165 billion).

In ECU terms the imports' rate of change between the first eleven months of 1993 and 1994 was larger than the exports' one (12.7% against 8.9%); if measured in US dollars these figures were respectively 14% and 9.9%.

In the first eleven months of 1994 the **Japanese** trade surplus went up by ECU 1.4 billion compared to the same period in 1993 totalling ECU 93.6 billion.

In ECU terms the exports' and imports' rates of change were both largely positive: respectively 8.2% and 11.5%; while, due to the appreciation of the YEN (7.8 against the ECU), if measured in the Japanese currency the two flows registered less important performances (0.7% and -0.2%).

(*) Due to frequent revisions of the monthly figures sent by the member states, the data shown are not necessarily identical to those presented in the previous publications.

GLOBAL TRENDS IN EXTERNAL TRADE

EXTERNAL TRADE BY MEMBER STATES: Results until November 1994.

In the first eleven months of 1994 Germany and Italy showed the two largest extra-EU surpluses among the EU countries, while the Netherlands and the United Kingdom registered the most important deficits.

In the period January-November 1994 **Germany** registered both the largest extra-EU surplus among the EU member states (ECU 23.2 billion) and the most important improvement compared to the same period a year earlier (ECU 7.3 billion). German exports showed a 12.7% increase over the corresponding period of 1993, while imports grew by 8.6%.

During the first eleven months of 1994 the **Italian** exports increased faster than imports compared to the same period a year earlier, the growth rate being respectively 11.3% and 8.9%.

The Italian trade balance improved its surplus by ECU 2.2 billion, reaching ECU 10.9 billion, from ECU 8.7 billion recorded in 1993.

The Dutch extra-EU deficit recorded the most important deterioration between January-November 1993 and 1994 (ECU 9.1 billion) and became the largest among the EU countries (ECU 20.5 billion).

As a matter of fact the **Netherlands'** extra-EU imports - which include goods entering the Union via Dutch harbours and then delivered to other member states - grew very fast in the first eleven months of 1994 (31.2%) while the exports' rate of change was slightly under the EU average (11%).

In the period January-November 1994 the **United Kingdom** was the EU country that experienced the second largest trade deficit which reached ECU 18.9 billion.

The UK's trade position showed a slight deterioration (ECU 0.7 billion) with reference to the same period of 1993 in spite of a positive gap between the exports' and imports' growth rates (+1.1 percentage points).

France's extra-EU trade surplus improved by ECU 1.4 billion between the above mentioned period in 1994 and a year earlier (from ECU 7.3 billion to ECU 8.7 billion). The rates of change of both imports and exports were well under the EU average: respectively 6.8% and 8.2%.

During the period January to November 1994 the extra-EU exports of the **BLEU** and **Greece** recorded the largest rates of growth among the EU member states compared to the same period a year earlier (respectively 20.6% and 17.9%). On the imports side while the BLEU registered a dynamic percentage change over January-November 1993 (22.3%), Greece was the only member state which experienced a negative rate of growth (-11.8%).

From January to November 1994 the external trade surpluses of **Denmark** and **Ireland** slightly reduced compared to the same period a year earlier: respectively to ECU 2.2 billion and ECU 0.7 billion.

In the first eleven months of 1994 the trade flows of both countries were very dynamic: Danish imports and exports grew respectively by 16.2% and 13% over January-November 1993, while the corresponding rates for Ireland were 22.3% and 15.5%.

Between the periods January-November 1993 and 1994 **Spain** and **Portugal** slightly worsened their trade balances compared to the correspondent period a year earlier: the extra-EU deficits rose respectively by ECU 0.2 billion and ECU 0.1 billion.

During the first eleven months of 1994 exports of both countries increased more than imports respectively by 1.1 and 3.4 percentage points.

EUROPEAN UNION EXTERNAL TRADE BY PARTNER COUNTRY

TRADE IN TERMS OF VALUE: Results until November 1994.

In the first eleven months of 1994 the EU trade balance with industrialized countries showed an improvement compared to the same period a year earlier by ECU 4.1 billion. At the same time the EU trade positions with developing countries, CEEC's and China worsened by ECU 0.6 billion, ECU 1.9 billion and ECU 1.8 billion respectively.

During the period January-November 1994 the EU trade flows with **industrialized countries** recorded an ECU 13.9 billion deficit compared to ECU 18 billion shown in the same period of 1993.

The trade surplus with the United States and Canada went up to ECU 2.6 billion from ECU 1.2 billion recorded a year earlier, while the deficit with Japan dropped by ECU 2.5 billion. The trade deficit with the EFTA countries increased from ECU 2.5 billion to ECU 3.6 billion.

The trade surplus with **developing countries** narrowed to ECU 19.3 billion from ECU 19.9 billion between the periods January-November 1993 and 1994.

The big increase of the surplus with the Asian NIC's (ECU 4 billion) wasn't sufficient to compensate the deterioration of the trade positions with the other areas: the EU reduced the surpluses with the Mediterranean Countries (from ECU 12 billion to ECU 10.7 billion), and with Latin America (- ECU 0.1 billion), and deepened the trade deficits with the OPEC (which reached ECU 3.9 billion) and the ACP countries ECU 3.5 billion deficit against an ECU 1.5 billion surplus).

In November 1994 the EU's trade with the **Central and Eastern European countries** was almost in balance stabilizing the cumulated balance for the 1994's first eleven months to an ECU 0.4 billion deficit (against an ECU 1.5 billion surplus registered a year earlier).

As well in the period January-November 1994 the deficit with **China** went up to ECU 9.8 billion from ECU 8 billion registered in the same period of 1993.

During the first eleven months of 1994 EU **imports** from the industrialized countries increased by 9.8% over the same period a year earlier. While imports from the United States and Canada and from EFTA recorded an increase above the EU average (11.8% and 12.6% respectively) the EU imports from Japan rose by 2.9% only.

The value of EU imports from developing countries increased by 11% between the periods January-November 1993 and 1994. Imports from ACP and Latin America countries recorded the most dynamic rates of change (24.7% and 22% respectively), while the flows from Asian Newly Industrialized (7.6%) and Mediterranean countries (8.2%) showed less significant performances. EU imports from OPEC countries registered an 1% decrease mainly due to the weak trend in international oil prices.

The EU imports from Central and Eastern European countries as well as from China continued the fast-growing trend shown in the previous two years: the percentage changes in the period January-November 1994 over a year earlier were respectively 23.5% and 17.1%.

In the period January-November 1994 **exports** from the EU to the industrialized countries went up by 12.3% compared to the same period of 1993. This result is mainly due to the good performance of EU exports to the United States and Canada (13.3%) and to Japan (17.7%), while sales in the EFTA markets registered a rate of growth close to the average (11.8%).

The global value of the exports to the developing countries recorded a more moderate increase (9.2%): while exports to the Asian NICs and to the Latin American countries showed almost the same dynamic rate of growth (20% and 20.3% respectively), the EU exports to the Mediterranean countries grew only by 3.4% and the sales to OPEC and ACP countries went down by 9.9% and 11.3% respectively. The EU export flows to Central and Eastern European countries recorded a percentage change in the first eleven months of 1994 well over the EU average (17.5%), while the exports to China, after the boom experienced in 1993, were still growing but at a more moderate rate (12.8%).

EUROPEAN UNION EXTERNAL TRADE BY PRODUCT

TRADE IN TERMS OF VALUE: Results until November 1994.

During the first eleven months of 1994 EU trade balance in machinery and transport equipment recorded the most important improvement (ECU 7.8 billion), while the trade deficit in crude materials increased by ECU 6 billion.

In the first eleven months of 1994 the *primary products' (SITC 0-4)* deficit went up to ECU 72.7 billion compared to the ECU 63.6 registered in the corresponding period in 1993.

The EU trade deficit in **fuel products (SITC 3)** grew slightly by ECU 0.7 billion, while the balances for **food, beverages and tobacco (SITC 0+1)** and **raw materials except fuel (SITC 2+4)** showed more evident deteriorations during the first eleven months of 1994 compared to the same period a year earlier: respectively ECU 2.4 billion and ECU 6 billion. As far as the *manufactured products (SITC 5-8)* are concerned, EU external trade showed a surplus of ECU 75.1 billion compared to the ECU 66.2 billion registered in the corresponding period in 1993.

The EU surplus in **machinery and transport equipment (SITC 7)** increased by ECU 7.8 billion, reaching ECU 56.4 billion. As well the **chemical products (SITC 5)** saw their surplus enhanced to ECU 28.4 billion (compared to ECU 26.4 billion registered one year earlier), while the deficit for **other manufactured goods (SITC 6+8)** went up to ECU 9.7 billion from ECU 8.8 billion registered in 1993.

As for the import flows, the raw materials except fuel (SITC 2+4) were the sections that recorded the most dynamic performance between the periods January-November 1993 and 1994 (+25.4%).

In the first eleven months of 1994 chemicals products (SITC 5) and food, beverages and tobacco (SITC 0+1)

registered a rate of growth respectively of 17.9% and 14.8%; while imports of machinery and transport equipment (SITC 7), and of other manufactured goods (SITC 6+8) showed an increase just above the average: respectively 11.9% and 12.1% compared to the same period a year earlier.

The reduction in international oil price is the main reason for the 1.3% drop in the fuel products' (SITC 3) imports between the first eleven months of 1993 and 1994. As a matter of fact in the first eleven months of 1994 the ECU cost of the EU's crude oil supplies went down by 6.3% (5.5% if measured in US dollar) compared to the same period a year earlier.

Between the first eleven months of 1993 and 1994, the exports of manufactured products aggregated by main SITC sections showed rates of change slightly above the average.

These rates were +13.2% for the chemicals products (SITC 5), +12.9% for the machinery and transport equipment (SITC 7), while the other manufactured goods (SITC 6+8) recorded a 12.2% increase over January-November 1993.

As far as the primary products are concerned in the same period the exports of raw materials other than fuel (SITC 2+4) went up of 13.5%, while food, beverages and tobacco (SITC 0+1) and fuel products (SITC 3) registered relatively weak performances: respectively +7.6% and -10.2%.

(1) The ECU is a "basket" monetary unit based on the market exchange rates of certain quantity of each European Union currency weighted on the basis of the average gross national product over five years and of the intra-EU trade of each Member State. The rates used here are averages of the daily rates.
