Foreword

1. Introduction

The environment in which trade statistics are collected has changed radically in recent years, leading to a detailed revision of the regulations. For statistics on trade with third countries, the introduction in 1988 of the Combined Nomenclature of goods (CN) and the Single Administrative Document had already led to considerable methodological changes. However, the major changes were brought about by the introduction of the single market on 1 January 1993. This led to the abolition of customs formalities between the Member States which had served as the traditional source of trade statistics, and the introduction of a special collection system called INTRASTAT.

Trade statistics – both detailed and general results – have now proved their worth. They are an instrument of prime importance for all users, both public and private. For instance, they enable Community authorities to prepare for multilateral and bilateral negotiations on the common trade policy, they help European businesses carry out market surveys and thus improve their competitiveness and they are an essential source of information for statistics on the balance of payments, the national accounts and short-term economic studies. This non-exhaustive list highlights the variety of users and their requirements.

The monthly bulletin on external and intra-European Union trade, published by Eurostat in the B series, Short-term Trends, sets out to provide within the shortest possible deadlines data on short-term trends in the trade of the European Union (EU) and its Member States. It contains data on the trade flows, broken down by major product group, of the EU with its main trading partners on the one hand and between the Member States on the other. Using a modernized production tool, this new version of the monthly bulletin aims to provide the reader with more information, in a more readable format. This bulletin comprises six parts:

- Trends in extra-EU and intra-EU trade
- The European Union and world trade
- The trading partners of the European Union
- Goods traded by the European Union with third countries
- The Member States and EU trade
- The external trade of the Member States.

While the first four parts (partially in the case of the first one) refer exclusively to EU trade (taken as a whole) with third countries, a comparison is made in the last two parts between the statistics on intra-EU trade and those on extra-EU trade. However, since the creation of Intrastat, the two types of statistics follow discrete methodologies and their aggregation may, therefore, involve risks.

Statistics on external trade and intra-EU trade at the most detailed classification level are published monthly on CD-Rom (Series B: intra and extra-EU trade). They are also available on-line from Eurostat's database (Comext).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External and Intra-EU Trade Statistical Yearbook (Series A)*".

2. Intra-EU trade

Statistics on trade between the Member States are based on Council Regulation (EC) N° 3330/91 of 7 November 1991 and on the various implementing regulations which have supplemented it or laid down rules on methodology, thresholds and forms. The system set up for the collection of information on trade between the Member States as from 1 January 1993 is commonly known as Intrastat. Its main features are:

- monthly statistical declarations sent directly by businesses to the competent national authorities;
- a system of thresholds abolishing all statistical obligations for almost two thirds of businesses;
- a close link with the VAT system.

Because of the introduction of this new system, the comparability of the intra-EU results prior to and after 1 January 1993 is limited, owing to a degree of under-estimation of flows. This was caused by the failure of some businesses to respond and the introduction of thresholds which exclude the smallest businesses. To correct this under-estimation, which varies according to the Member State, some countries make adjustments at an aggregate level (in general by partner country). Arrivals, i.e. imports from other EU countries, are particularly under-estimated. Consequently, Eurostat considers dispatches now to be the most reliable gauge of intra-EU trade.

If the dispatches of a given Member State are compared with the corresponding arrivals of its partners, differences may emerge, mainly for the following reasons:

- the threshold effect: a business may be obliged to provide statistical information in one Member State while its client or supplier, depending on the case, in the partner country may be dispensed from providing any or certain types of statistical information (e.g. product classification), thus preventing comparison at the most detailed level;
- the link with tax: this may result in a time-lag between the recording of dispatches and that of the corresponding arrivals. In addition, for certain special transactions (eg. triangular transactions or outside processing) distortions may arise because of the difficulty in obtaining information on the partner country or on the statistical value of the goods. Tax fraud may have an effect, which is difficult to assess, on statistical declarations (under-assessment of arrivals, over-assessment of dispatches or failure to make a declaration);
- there may be other reasons, already in existence before 1993, for discrepancies (goods classified under different headings of the product nomenclature, different statistical values for dispatches and arrivals, etc.) and in addition there may be mistakes or omissions which are unavoidable despite the constant efforts by Eurostat and the Member States to improve the quality and topicality of statistical information.

For these reasons, figures on intra-EU trade should be interpreted with caution. They are also subject to frequent revision.

3. *Extra-EU trade*

For data on the years 1978 to 1995, the Member States forwarded statistics on trade outside the European Union in accordance with a uniform methodology provided for in Council Regulation (EEC) N° 1736/75 and the regulations deriving from it. Since the beginning of 1996, data have been submitted in accordance with Council Regulation (EC) N° 1172/95 and its implementing rules which however retain the former methodological principles.

External trade statistics are usually recorded on the basis of customs declarations submitted by the declarant when clearing customs. The Single Administrative Document is used for this purpose. In some Member States, certain businesses are allowed to make a summary declaration.

Statistics on external trade and intra-EU trade are compiled on the basis of Community regulations. The same regulations are generally the basis for the compilation of statistics published nationally by each Member State. Nevertheless, methodological differences do arise, as a result of which Community statistics and national statistics do not match exactly.

Methodological notes and sources

1. Data sources

The tables in this publication on EU trade and that of the Member States were compiled by Eurostat using the detailed data forwarded by the Member States. Eurostat would like to take this opportunity to thank the departments concerned in the Member States for their cooperation, which makes it possible to compile these harmonized statistics and guarantee their quality.

Some of the tables in the first two parts describe the development of external trade as declared by some of the EU's most important trading partners. With the exception of Table 1C and the results concerning the EU, these tables were compiled from data taken from the tapes sent each month by the International Monetary Fund. The information in table 1C is taken from the Comtrade database, which is managed by the United Nations.

2. Coverage

2.1. Intra-EU trade

Statistics on trade between the Member States cover the arrivals and dispatches of movable property recorded by each Member State. Arrivals and dispatches are defined as follows:

- *arrivals* are goods in free circulation within the European Union which enter the statistical territory of a given Member State;
- *dispatches* are goods in free circulation within the European Union which leave the statistical territory of a given Member State to enter another Member State.

Goods placed under the customs arrangements of inward processing or processing under customs control (for working, processing or repairs) are also regarded as arrivals or dispatches.

The reader should also note that statistics on trade between the Member States do not cover goods in transit or trade between Member States and, for example, the French overseas departments or the Canary Islands.

2.2. Extra-EU trade

Statistics on trade with third countries cover movable property imported and exported by the European Union. The definitions are as follows:

- *imports* are goods which enter the statistical territory of the European Union from a third country and are placed under the customs procedure for free circulation (as a general rule goods intended for consumption), or inward processing, or processing under customs control (goods for working, processing or repair) immediately, or after bonded warehousing;
- *exports* are goods which leave the statistical territory of the European Union for a third country after being placed under the customs procedure for exports (definitive export) or outward processing (goods for working, processing or repair).

Statistics on trade with third countries do not, therefore, include goods in transit or those placed under a customs procedure for bonded warehousing or temporary entry (for fairs, exhibitions, tests, etc.) nor do they include re-export following entry under one of these procedures.

The field covered by statistics on trade with third countries corresponds to "special" trade. This method of accounting differs from that of "general" trade, which includes all goods entering the statistical territory and those leaving it, with the exception, however, of goods in transit. Goods placed in bonded warehouses and exports of goods after bonded warehousing are included in the definition of general trade.

3. Statistical data

3.1. Statistical territory

The statistical territory of the European Union comprises the customs territory of the European Union, excluding the French overseas departments (Guadeloupe, Guyana, Martinique and Réunion) and the Canary Islands, which are therefore considered as third countries. Likewise, Greenland, Ceuta and Melilla are not covered, nor are the overseas countries and territories which are not part of the EU customs territory.

Since October 1990, the external trade data of Germany refers to the Federal Republic of Germany in its borders as of 3 October 1990, i.e. after reunification.

3.2. Trading partners: countries and economic areas

The results are broken down by country and area in accordance with the "Country nomenclature for statistics on European Union external trade and trade between its Member States", referred to as the Geonomenclature (Geonom). For the purposes of presenting the results, Eurostat has defined geographical and economic areas.

In the case of exports (or dispatches), the country (or Member State) of final destination of the goods is the partner country.

The trading partner in the case of an intra-European Union arrival is always the Member State of consignment of the goods, even when the goods originate in third countries and have been placed in free circulation in the Member State of consignment. For imports (extra-EU trade) the statistics show, except in certain cases (returned goods, objects of art, etc.), the country of origin. Where two or more countries were involved in the production of certain goods, the country where the final processing or substantial working took place is considered to be the country of origin.

3.3. Goods classification

The most detailed results published by Eurostat and accessible to the public on magnetic medium are broken down according to the subheadings of the Combined Nomenclature (CN). This tariff and statistical nomenclature is based on the international nomenclature of the Harmonized System (HS) and comprises around 10 000 eight-digit codes.

In this publication, the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of conversion tables drawn up by Eurostat on the basis of the CN.

3.4. Estimate of the statistical value

Although the data is collected in units of national currency, the values set out in this bulletin have been expressed, after conversion, in European Units of Account (ECU). The ECU is a "basket" currency unit based on the market exchange rates of a specific quantity of each European Union currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-EU trade balance. The rates used in this bulletin are averages of daily rates. The annex to the bulletin contains a table showing the conversion rates used.

3.4.1. Intra-European Union trade

The statistical value is based on the assessment for taxation purposes or the amount billed. It is the FOB (free on board) value for dispatches and the CIF (cost, insurance, freight) value for arrivals. It comprises only those subsidiary costs (freight and insurance) which relate, for dispatches, to the journey to the border of the Member State from which the goods are dispatched and, for arrivals, to the journey to the border of the Member State into which the goods enter.

In the case of arrivals or dispatches under an inward or outward processing arrangement and those for outside processing, it is always the total value of the goods that is recorded and not simply the added value.

3.4.2. Extra-European Union trade

The statistical value is based on the amount billed (real or provisional) or if it exists, on the customs value. It is the FOB value for exports and the CIF value for imports. It comprises only those subsidiary costs (freight and insurance) which relate, for exports, to the journey within the territory of the Member State from which the goods are exported and, for imports, to the journey outside the territory of the Member State into which the goods are imported.

In the case of imports or exports under an inward or outward processing arrangement and those for outside processing, it is always the total value of the goods that is recorded and not simply the added value.

3.5. Statistical secrecy

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The legislation, the procedures for implementing it, and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data: it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only, or to exports only, or to only some of the variables recorded (value, statistical procedure, quantities, partner country, etc.).

Measures are taken during collection and during processing by Eurostat to minimize the effect of confidentiality on the results. In particular, subheadings which include confidentialized trade data are included at higher levels of aggregation and in totals.

4. Indices

4.1. Introduction

Changes over time in the value of trade are influenced by changes in prices and the quantities marketed. Eurostat calculates Fisher's annual chain indices to measure these two effects. This publication sets out the indices calculated according to the SITC for each Member State on a strictly comparable basis. These indices may be consulted on the TREND database.

4.2. Data sources

The data transmitted for external trade and intra-European Union trade statistics are used at the most detailed level for calculating the indices. The indices of unit values (values divided by quantities) are used as price change indicators. The computer programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

Two rules are applied to exclude unlikely price behaviour. The first is that, given the general level of inflation, the price of a product will not change significantly compared with its level the previous year. Any change of five points or more is considered suspect. The second rule – which is more restrictive – is that the change in the price of a product compared with the closest month available will not differ significantly from the average change in the price of similar products. The application of these rules prevents extreme changes due to factors unrelated to prices which, otherwise, would lead to a distortion of the unit value index. For products whose unit values are rejected, the changes are drawn up according to those of similar products.

Trends in European Union trade

GLOBAL TRENDS IN WORLD TRADE

The European Union's trade balance improved sharply (by ECU 20 billion) between 1994 and 1995. In the same period, the United States' deficit improved by ECU 5 billion while Japan registered a deterioration of ECU 20 billion in its balance.

In 1995, the EU as a whole consolidated its position as the world's leading exporter, while the United States was the most important world outlet.

In 1995 the *European Union's*(*) trade balance was ECU 23.4 billion in surplus whereas in 1994 it had had a surplus of only 3.2 billion.

This improvement is the result of the buoyant performance of extra-EU exports (8.8% growth rate, compared with the 7.2% registered by world exports), together with a reduction in the growth rate of imports (5%, well below the 7.3% world average).

As a consequence, the EU as a whole consolidated its position as the top world exporter (ECU 568 billion, corresponding to a 20.2% share), while on the import side its share fell slightly to 18.5% (ECU 544 billion).

From January to December 1995, the *United States'* trade deficit recorded a slight decrease compared with a year earlier (ECU 5.3 billion), to a total of ECU 142.7 billion. This was mainly due to the gap between the export and import growth rates (3.6% as against 1.8%).

Despite a 1% decline since 1994, the United States confirmed its first place in the world ranking of importers, with a share of 20% in 1995.

In 1995 *Japan* recorded a trade surplus of ECU 81.7 billion, down from 101.8 billion in the previous year. This result was due mainly to the very high growth rate of Japanese imports (+11.4% over the previous year), together with a sluggish export performance (+1.8% growth rate), but could also be partly explained by the appreciation of the yen in the first half of 1995 (+6.6% against the ecu in the second quarter of 1995).

As a result, the Japanese share of world imports went up to 8.7% in 1995, while its export share fell to 12%.

(*) The European Union's figures for 1995 are provisional and subject to frequent revisions. The symbol ":" indicates that the figure is not available. The 1994 figures for the three new Member States (Austria, Finland and Sweden) are estimated using different international sources which do not follow EU methodology; for this reason, the growth rates for these countries should be treated with caution.

EU EXTERNAL TRADE BY MAIN PARTNER

The trade between the EU and its Central and Eastern European (CEE) partners was the most dynamic regional element in 1995 in relative terms, with rates of growth for both export and import flows of around 21%. The EU trade balance with the DAE and the other Asian countries showed the largest surpluses (ECU 11.2 and 15.6 billion respectively), while trade with Japan and China registered the highest deficits (ECU 21.4 and 11.7 billion).

Trade flows with the **United States** (the most important individual partner for the EU, with an 19% share in 1994) recorded a deficit of ECU 2.7 billion in 1995. This represents a deterioration of ECU 5 billion compared with the previous year, when the EU–US balance showed a surplus of ECU 2.4 billion.

This result is due to the gap of more than 5 percentage points between the growth rates for EU imports and exports: +3.6% and –1.5% respectively between 1994 and 1995.

In comparison, the trade balance with **Japan** improved by ECU 3.3 billion between 1994 and 1995, while the deficit with the **EFTA** countries dropped from ECU 2.5 billion to only 0.9 billion.

EU exports to these partners were in fact quite dynamic (growth rate over the previous year of 13% and 8.7% respectively), while imports over the same period showed more moderate rates of change.

As in the previous year, during 1995 trade between the EU and its **CEE** partners was the most dynamic regional element in relative terms, with rates of growth for both export and import flows of around 21%. The EU trade balance with these countries (which in 1994 accounted for around 8.4% of total extra–EU flows, with one percentage point increase compared to 1993) saw its surplus rise by ECU 2.1 billion to ECU 11.1 billion.

Exports to the **CIS** countries were also quite dynamic between 1994 and 1995 (+12.3% growth rates). In this instance, the EU registered a deficit of ECU 4.5 billion for 1995, a decrease of 1.5 billion compared with a year earlier.

The EU also showed significant growth rates in its exports to the **DAE** countries (15% compared with 8.6% for imports). The large gaps registered between the rates of change for imports and exports boosted the surplus with these countries (which together accounted for almost 10% of EU external trade in 1994) to ECU 11.2 billion.

In January–December 1995 there was an easing off of the rapid expansion which EU trade with **China** had experienced in previous years. Imports from this country increased by only 7% and the export flow registered only 4.4%. As a consequence, the EU–China trade deficit went up by ECU 1.1 billion to ECU 11.7 billion.

EU TRADE BY MEMBER STATE

EXTRA-EU TRADE

Germany and France showed the two largest extra-EU surpluses among the EU countries, while the Netherlands and the United Kingdom registered the highest external deficits.

In 1995, **Germany** was the EU Member State with the largest extra-EU trade surplus (ECU 26.7 billion). This represents an improvement of 6.7 billion over the previous year, and is due to the positive gap (3.4 percentage points) between the growth rates for exports and imports.

Germany is also the most important player in trade between the EU and third countries. Its 1994 share of total extra-EU exports amounted to 29%, while the figure for imports stood at 25%.

The second-ranked country (in value terms) was the **United Kingdom** (which in 1994 accounted for 13.7% and 17.3% of exports and imports respectively). The UK was also the EU Member State with the second-largest trade deficit (ECU 20.1 billion) in 1995.

France's extra-EU trade surplus showed the biggest improvement among the EU Member States compared with a year earlier, from ECU 8.9 billion in 1994 to ECU 15.4 billion in 1995. The rate of change for exports was quite high (6.8%), but the rate for imports fell by 1.6%.

Between January and December 1995 **Italy's** exports increased faster than its imports compared with a year earlier, the growth rates being 11.7% and 10.2% respectively. As a consequence the Italian trade balance improved by ECU 2.3 billion, with the 1994 figure of ECU 12.4 billion rising to 14.7 billion in 1995.

The **Netherlands** continued to be the EU Member State with the largest external deficit. In 1995 it grew to ECU 21 billion, up by 2 billion compared with the same period in 1994. The annual growth rate of the country's extra-EU imports slowed down in 1995 (7.4%, compared with 26% at the end of 1994) but was still above the figure for exports (5.9%).

The **Belgium-Luxembourg** extra-EU trade balance recorded the biggest drop between 1994 (when it was almost level) and the corresponding period in 1995 (a deficit of ECU 3.2 billion). The imports of these two countries recorded the second-largest percentage change over the previous year (15%) while on the export side the rate was below the EU average (4.3%).

The three new Member States together contributed positively to the EU external trade balance in 1995. **Sweden**, **Finland** and **Austria** registered a surplus of ECU 9.3, 5.3 and 3 billion respectively.

This result was even more significant when compared with the relatively small volume of the three countries' trade: in 1994, the new Member States together accounted for about 8% of total extra-EU trade flows.

Among the five remaining Member States (which together accounted for about 10% of extra-EU flows in 1994), **Denmark** and **Ireland** maintained their external surplus at almost the same level as in the previous year: ECU 2.8 and 0.2 billion respectively. On the other hand, the three southern Member States recorded extra-EU trade deficits amounting to ECU 4.4 billion for **Spain**, ECU 3 billion for **Portugal** and 2.5 billion for **Greece**.

INTRA-EU TRADE(**)

The Netherlands and Germany produced the two largest intra-EU surpluses, while Austria and Greece registered the highest internal deficits.

The first estimate of intra-EU trade in the period January–September 1995 showed a total value for dispatches (i.e. exports, which are the more reliable measure of intra-EU trade) of around ECU 1 trillion, with an increase of 12.7% compared with a year earlier.

The **Netherlands** was the Member State with the largest intra-EU surplus, which in 1995 grew to ECU 34.7 billion, up by 10.4 billion compared with 1994. This is consistent with this country's huge deficit in extra-EU trade and suggests that a large share of the Netherlands' extra-EU imports transits to other EU countries.

During 1995, the annual growth rate of the country's intra-EU dispatches rose dramatically (20%, compared with 11.5% at the end of 1994) while for arrivals the growth rate declined to 12.6%.

As mentioned for extra-EU trade, **Germany** is also the most important player in trade with the EU partners: its 1994 share of total intra-EU trade amounted to 22.6%.

In 1995, this country registered the second-largest intra-EU trade surplus (ECU 24 billion), with an improvement of 5.7 billion compared with the same period of the previous year.

France was the second-ranked country in terms of volume of trade with EU partners, with a 1994 share of 15%. In 1995 its intra-EU trade displayed a deficit of ECU 6.4 billion, a 2 billion increase over 1994.

With a 1994 share of around 10% each, **Italy** and **Belgium–Luxembourg** were important players in intra-EU trade. During January–December 1995, these two countries both registered a surplus with their EU partners of ECU 6 and 12.9 billion respectively.

The preliminary figures for the three new Member States do not allow for a clear assessment of their trends in trade with EU partners. In fact, the dramatic 1995 growth rates shown by **Sweden, Austria and Finland** could be partly explained by a statistical bias resulting from the introduction of the new collection system (Intrastat).

Apart from Austria, the **United Kingdom, Spain** and **Greece** were the EU Member States with the largest internal deficits in 1995. While the UK (12% share of intra-EU trade in 1994) improved its trade position of ECU 2 billion compared with 1994, the deficits of the two Mediterranean countries worsened by ECU 1.1 and 0.4 billion respectively.

Denmark, Ireland and Portugal, together accounting for 6% of intra-EU trade in 1994, showed quite high rates of growth in 1995. As far as Ireland and Portugal are concerned, most of the growth was on the dispatches side (+16.4% and +15.4% change on the previous year respectively), while, in the same period, Danish arrivals registered a 15.5% growth rate.

(**) On 1 January 1993, following the abolition of customs controls in the EU, a new collection system for intra-EU data (Intrastat) began. Instead of being derived from customs declarations, trade figures are now compiled from data provided directly by companies.

SEASONALLY ADJUSTED TIME SERIES OF EU TRADE

Extra-EU trade

As a result of the accession of Austria, Finland, and Sweden, the time series shown here comprise the external trade of the EUR12 Member States up to and including 1994 and the EUR15 Member States from 1995 onwards, with non-Member countries.

Seasonally-adjusted EU exports appeared to stabilise during the first eight months in 1995 at some ECU 47 billion. However, from September onwards they rose to over ECU 48 billion.

Seasonally-adjusted EU imports reached a peak (ECU 50.4 billion) in December 1994. The enlargement of the EU corresponded with a drop in imports to ECU 44 billion. This was principally due to the fact that trade from the three new Member States, which was previously classified as extra-EU trade, became intra-EU trade. This flow is higher than the Finnish, Swedish, and Austrian imports from the rest of the world.

Between January and December 1995, seasonally adjusted imports increased by 8.4% reaching ECU 47.7 billion.

Since the accession of the three new Member States, the trade balance has shown a clear surplus, amounting to ECU 23.4 billion for 1995.

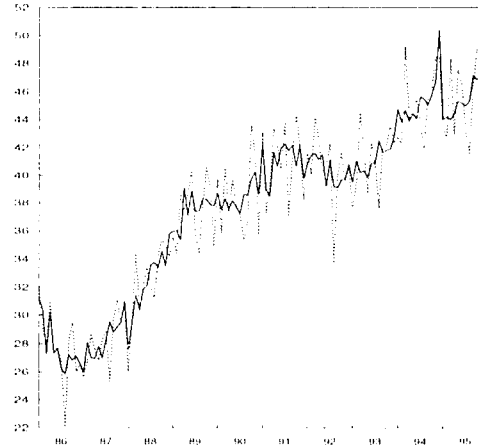

Intra-EU trade

Dispatches were chosen to represent intra-EU trade. Up to and including 1994, figures relate to EUR12. After a first break in January 1993 which was mainly due to the introduction of the Intrastat system, intra-EU seasonally adjusted trade increased by 25.8% between January 1993 and December 1994. With the enlargement of the EU it rose by 18%. In the course of the year 1995, seasonally adjusted trade between the 15 Member States of the EU increased by 5.1% reaching ECU 85.9 billion in December 1995.

(1) The ECU is a 'basket' monetary unit based on the market exchange rates of certain quantity of each European Union currency weighted on the basis of the average gross national product over five years and of the intra-EU trade of each Member State. The rates used here are averages of the daily rates.

LIST OF PRODUCTS : SITC, REV. 3

0 Food and live animals

- 00 Live animals other than animals of division 03
- 01 Meat and meat preparations
- 02 Dairy products and birds' eggs
- 03 Fish (not marine mammals), crustaceans, molluscs and aquatic invertebrates and preparations thereof
- 04 Cereals and cereal preparations
- 05 Vegetables and fruit
- 06 Sugars, sugar preparations and honey
- 07 Coffee, tea, cocoa, spices, and manufactures thereof
- 08 Feeding stuff for animals (not including unmilled cereals)
- 09 Miscellaneous edible products and preparations

1 Beverages and tobacco

- 11 Beverages
- 12 Tobacco and tobacco manufactures

2 Crude materials, inedible, except fuels

- 21 Hides, skins and fur skins, raw
- 22 Oil seeds and oleaginous fruits
- 23 Crude rubber (including synthetic and reclaimed)
- 24 Cork and wood
- 25 Pulp and waste paper
- 26 Textile fibres (other than wool tops and other combed wool), and their wastes (not manufactured into yarn or fabric)
- 27 Crude fertilizers, other than those of division 56, and crude minerals (excluding coal, petroleum and precious stones)
- 28 Metalliferous ores and metal scrap
- 29 Crude animal and vegetable materials, n.e.s.

3 Mineral fuels, lubricants and related materials

- 32 Coal, coke and briquettes
- 33 Petroleum, petroleum products and related materials
- 34 Gas, natural and manufactured
- 35 Electric current

4 Animal and vegetable oils, fats and waxes

- 41 Animal oils and fats
- 42 Fixed vegetable fats and oils, crude, refined or fractionated
- 43 Animal or vegetable fats and oils, processed; waxes of animal or vegetable origin; inedible mixtures or preparations of animal or vegetable fats and oils, n.e.s

5 Chemicals and related products, n.e.s

- 51 Organic chemicals
- 52 Inorganic chemicals
- 53 Dyeing, tanning and colouring materials
- 54 Medical and pharmaceutical products
- 55 Essential oils and resinoids and perfume materials; toilet, polishing and cleaning preparations
- 56 Fertilizers (other than those of group 272)
- 57 Plastics in primary forms
- 58 Plastics in non-primary forms
- 59 Chemical materials and products, n.e.s

6 Manufactured goods classified chiefly by material

- 60 Complete industrial plant appropriate to section 6
- 61 Leather, leather manufacture, n.e.s, and dressed fur skins
- 62 Rubber manufacture, n.e.s
- 63 Cork and wood manufacture (excluding furniture)
- 64 Paper, paperboard and articles of paper pulp, of paper or of paperboard
- 65 Textile yarn, fabrics, made-up articles, n.e.s, and related products
- 66 Non-metallic mineral manufactures, n.e.s
- 67 Iron and steel
- 68 Non-ferrous metals
- 69 Manufacture of metals, n.e.s

LIST OF PRODUCTS : SITC, REV. 3

7 Machinery and transport equipment

- 70 Complete industrial plant appropriate to section 7
- 71 Power-generating machinery and equipment
- 72 Machinery specialized for particular industries
- 73 Metal working machinery
- 74 General industrial machinery and equipment, n.e.s, and machine parts, n.e.s
- 75 Office machines and automatic data-processing machines
- 76 Telecommunications and sound recording and reproducing apparatus and equipment
- 77 Electrical machinery, apparatus and appliances, n.e.s and electrical parts thereof (including non-electrical counterparts n.e.s of electrical household type equipment)
- 78 Road vehicles (including air-cushion vehicles)
- 79 Other transport equipment

8 Miscellaneous manufactured articles

- 80 Complete industrial plant appropriate to section 8
- 81 Prefabricated buildings; sanitary plumbing, heating and lighting fixtures and fittings, n.e.s

- 82 Furniture and parts thereof; bedding, mattresses, mattress supports, cushions and similar stuffed furnishings
- 83 Travel goods, handbags and similar containers
- 84 Articles of apparel and clothing accessories
- 85 Footwear
- 87 Professional, scientific and controlling instruments and apparatus, n.e.s
- 88 Photographic apparatus, equipment and supplies and optical goods, n.e.s; watches and clocks
- 89 Miscellaneous manufactured articles, n.e.s

9 Commodities and transactions not classified elsewhere in SITC

- 91 Postal packages not classified according to kind
- 93 Special transactions and commodities not classified according to kind
- 94 Complete industrial plant, not elsewhere specified
- 96 Coin (other than gold coin) not being legal tender
- 97 Gold, non-monetary (excluding gold, ores and concentrates)
