Eurostat on the Internet

Our website is updated daily. Visit it today and get:

- direct and free access to all Eurostat PDF publications;
- direct and free access to our databases,
- alert me — customisable e-mail alerts;
- specialised access to short-term economic data;
- complete information on all Eurostat products and services.

European Statistical Data Support

Eurostat has set up with the members of the 'European statistical system' a network of support centres which will exist in nearly all Member States as well as in some EFTA countries. Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site.

Media Support Eurostat

Journalists can contact the media support service:

Tel. (352) 4301-33408

Fax (352) 4301-35349

E-mail: eurostat-mediasupport@ec.europa.eu

Europe Direct is a service to help you find answers to your questions about the European Union

Freephone number (*):

EUROSTAT

L-2920 Luxembourg — Tel. (352) 43 01-1 — <http://ec.europa.eu/eurostat>

Eurostat is the Statistical Office of the European Communities. Its task is to gather and analyse figures from the different European statistical offices in order to provide comparable and harmonised data for the European Union to use in the definition, implementation and analysis of Community policies. Its statistical products and services are also of great value to Europe's business community, professional organisations, academics, librarians, NGOs, the media and citizens.

To ensure that the vast quantity of accessible data is made widely available and to help each user make proper use of the information, Eurostat has set up a publications and services programme.

This programme makes a clear distinction between general and specialist users and particular collections have been developed for these different groups. The collections *Press releases*, *Statistics in focus*, *Panorama of the European Union*, *Pocketbooks* and *Catalogues* are aimed at general users. They give immediate key information through analyses, tables, graphs and maps.

The collections *Detailed tables* and *Methods and nomenclatures* suit the needs of the specialist who is prepared to spend more time analysing and using very detailed information and tables.

As part of the new dissemination policy, Eurostat has developed its website. All Eurostat publications are downloadable free of charge in PDF format from the website. Furthermore, Eurostat's databases are freely available there, as are tables with the most frequently used and demanded short- and long-term indicators.

Eurostat has set up with the members of the 'European statistical system' a network of support centres which will exist in nearly all Member States as well as in some EFTA countries. Their mission is to provide help and guidance to Internet users of European statistical data. Contact details for this support network can be found on our Internet site.

PRELIMINARY REMARKS

Introduction

Eurostat's data-base¹⁾ on fishery statistics contains around 1200 000 time series and 28 million data items covering fishery catches, landings of fishery products, aquaculture production, the fishing fleets, foreign trade in fishery products, employment in fisheries and supply balance sheets for fishery products. As far as data availability and resources permit, the contents of the data-base have been maximised in terms of the length of the time series and the country coverage.

This publication is intended to summarise the fisheries data for the period 1990-2005 for:

- EU-15 Member States: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden and the United Kingdom.
- EU-25 Member States: EU-15 plus Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovak Republic and Slovenia.
- EEA-28 countries: EU-25 plus Iceland, Liechtenstein and Norway.
- EU Candidate Countries: Bulgaria, Croatia, Romania and Turkey.

Data sources

Until now, Eurostat's programme of fishery statistics has been highly dependent on collaboration with other international organisations with responsibilities for fishery statistics. This collaboration is co-ordinated through the Co-ordinating Working Party on Fishery Statistics (CWP). Eurostat gratefully acknowledges this contribution to its programme of work without which the quantity and quality of data in the data-base on fishery statistics would be very restricted.

While every effort has been made to provide complete, comparable and harmonised data in all topics covered in the data-base and in this publication, attention is drawn to the following notes which briefly indicate the definitions used in each of the topics covered and where care has to be exercised in the use of the data.

¹⁾ Eurostat's databases are available free of charge through the Eurostat internet site: <http://ec.europa.eu/eurostat>

Total production

Total production is the sum of the total catches and aquaculture production. See below for the notes on these two components of total production.

Total production is recorded in the live weight equivalent of the production (for aquaculture) or of the landings (for catches).

Aquaculture production

Aquaculture means the farming of aquatic organisms including fish, molluscs, crustaceans, aquatic plants and other aquatic organisms. It includes capture-based aquaculture and the production of aquatic organisms which are harvested by an individual or corporate body which has owned them throughout their rearing period. It excludes aquatic organisms which are exploited by the public as a common property resource: these are the harvest of fisheries.

Farming means some form of intervention in the rearing process to enhance production, such as regular stocking, feeding and protection from predators and involves individual or corporate ownership of the stock being cultivated. Capture-based aquaculture means the practice of collecting "seed" material, from early life stages to adults, from the wild and subsequent on-growing to marketable size using aquaculture techniques.

The national authorities of EEA countries submit aquaculture production data to Eurostat under the terms of:

Council Regulation (EC) no. 788/96 of 22 April 1996
on the submission by Member States of statistics on
aquaculture production (*OJ L108 of 01.05.1996*)

FAO receives aquaculture production data from national authorities on the FISHSTAT AQ questionnaire. This questionnaire uses the same concepts and definitions as the EU legislation and the data from the two sources are comparable. The FAO Fisheries Department performs a check on the quality of the data and makes the results available to Eurostat for inclusion in the NewCronos database.

The data are recorded in the live weight equivalent of the product weight.

Catch

Catch statistics are submitted to Eurostat by EEA member countries in compliance with the following EU legislation:

Commission Regulation (EC) no. 448/2005 of 15 March 2005 amending Regulation (EC) no. 1637/2001 amending Regulation (EEC) no. 3880/91 on the submission of catch statistics by Member States fishing in the Northeast Atlantic. (*OJ L74 of 19.03.2005*)

Commission Regulation (EC) no. 1636/2001 of 23 July 2001 amending Regulation (EEC) no. 2018/93 on the submission of catch and activity statistics by Member States fishing in the Northwest Atlantic. (*OJ L222 of 17.08.2001*)

Commission Regulation (EC) no. 1638/2001 of 24 July 2001 amending Regulation (EC) no. 2597/95 on the submission of catch statistics by Member States fishing in certain areas other than those of the North Atlantic (*OJ L222 of 17.08.2001*)

All national authorities are requested to submit catch data to FAO and the appropriate regional organisations on a series of STATLANT questionnaires. These questionnaires use the same concepts and definitions as are used in the EU legislation. The regional organisations and FAO make the data for non-EEA countries available to Eurostat.

The national authorities are requested to submit catch statistics for all commercial, subsistence and recreational fisheries. However the reporting of data for recreational fisheries is known to be incomplete.

The data are reported as the live weight equivalent of the landings (i.e. the landed weight of a product to which an appropriate conversion factor has been applied). The data therefore exclude quantities of fishery products which are caught but not landed. For example, fish caught but rejected at sea (a non-commercial species, under-sized fish, etc) or fish consumed on board the vessel are excluded.

The flag of the fishing vessels is used as the primary indication of the nationality of the catch, though this concept may be varied in certain circumstances (for example, in the case of joint ventures and chartering of vessels).

Landings

Each EEA member country reports monthly data on the quantities and values of fishery products landed in its ports under the terms of:

Council Regulation no. 2104/93 of 22 July 1993 amending Regulation (EEC) no. 1382/91 on the submission of data on the landings of fishery products in Member States (*OJ L191 of 31.07.1993*)

The data are the landings (expressed as the product weight) of all fishery products in the reporting country, regardless of the nationality of the vessel making the landings. Landings by vessels of the reporting country in foreign ports are excluded.

Foreign trade

Data for EEA Member States have been extracted from Eurostat's COMEXT foreign trade data-base.

The data on the trade balance are probably under-estimates. Apart from the fact that, in many situations, export data are less completely recorded than import data, two specific situations with regard to fisheries result in the under-reporting of exports:

- trans-shipping of catches at sea to vessels of a different nationality,
- landings by fishing vessels in foreign ports.

Per capita supply

The source of these data is the FAO Fisheries Circular FIDI/C821-Rev.7 (*Fish and Fishery products: World Apparent Consumption based on Food Balance Sheets 1961-2001*). These balance sheets are compiled by FAO's Fisheries Department using the concept:

$$\text{Per capita food supply} = \frac{\text{Production} + \text{Imports} - \text{Exports} - \text{Non-Food Uses} + \text{Change in Stocks}}{\text{Resident population}}$$

The data are expressed in kg live weight / head of population / year.

The items are converted to the live weight equivalent from the landed weight or the product weight using appropriate conversion factors.

Quantities of fish or other fishery products not used for human consumption (for example, fish used for the production of meal and oils or fish fed directly to animals) are excluded from the balance sheets.

Particular attention is drawn to the fact that the data is not a direct measure of the *per capita consumption*. The data results from the compilation of balance sheets and thus is dependent on the errors associated with each item of the balance sheets. Among the problems in compiling balance sheets for fishery products are obtaining data for the changes in stocks and the selection of appropriate factors for the conversion to the live weight equivalent.

Fishing fleet

The data for EU Member States are tabulated from Eurostat's Statistical Register of Fishing Vessels which is up-dated annually from the administrative file of fishing vessels maintained by the European Commission's Directorate-General for Fisheries and Maritime Affairs. Data for Iceland and Norway are compiled from fleet files submitted by the national authorities.

During the period covered by these data the method of recording the tonnage of fishing vessels changed from the Gross Register Tonnage (Oslo Convention, 1947) to the Gross Tonnage (London Convention, 1969). These two measures can produce significantly different data. This change has taken place at differing rates in the Member States and thus care has to be exercised both in comparing data between countries and between years (in the latter case due to changes over time in the proportion of vessels being recorded in each of the units).

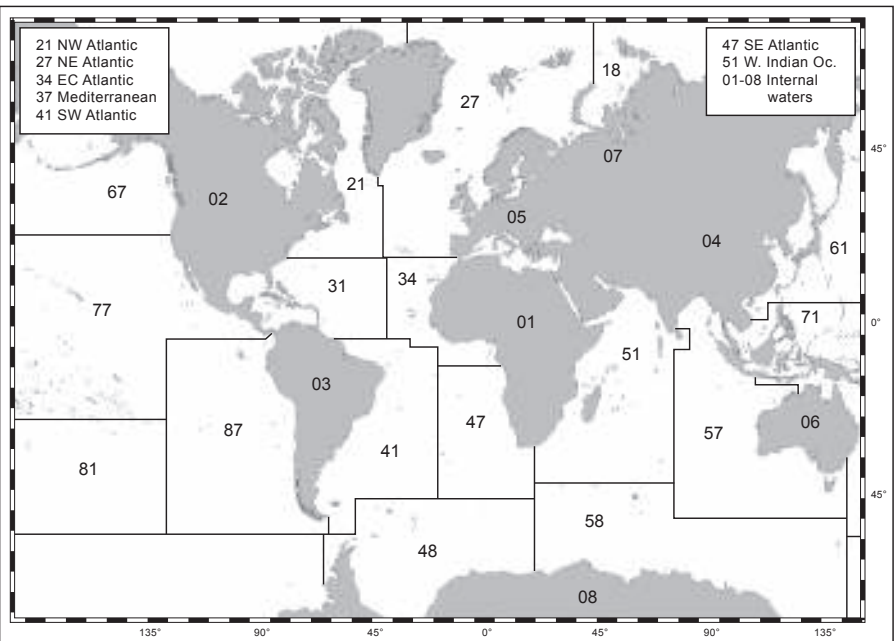

Employment

The data have been collected by FAO from the national authorities in the FISHSTAT FM questionnaire and has been published in FAO Fisheries Circular FIDI/C929-Rev.2 (*Numbers of Fishers 1970-1997*).

The national authorities are requested to submit data on the number of fishers (male and female) from both marine and inland fisheries and the number of employees in aquaculture production. It is known that there can be significant differences in the national sources of the data and in the definitions used.

Commentary

In 2004 the EU-25 production of fishery products (capture fisheries and aquaculture production) was 5% of the world total. The 10 new Member States only contributed 9% to the total EU-25 production.

Four of the EU-25 Member States (Denmark, France, Spain and the United Kingdom) accounted for 56% of the total production in 2004.

The production in 2004 was about 10% less than the estimated total production in 1990.

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

- Sector:** Aquaculture production
Years: 1984 onwards
Periodicity: annual
Species: individually identified species
Areas: by major fishing areas
Environment: freshwater, brackish water, marine water
Countries: individually by all reporting countries
Unit: tonnes live weight and value (ECU/EUR)
Data Source: Eurostat;
For fishing areas, countries and years not covered by EU legislation, FAO.

Commentary

The EU-25 aquaculture production in terms of volume was only 2.3% of the world production in 2004. (N.B. 91% of the total production was by Asian countries.)

The EU-25 production increased by about 38% from 1990-2004. In the same period the production in Norway (largely of Atlantic salmon) increased by 324%.

Four Member States (France, Italy, Spain and the United Kingdom) accounted for 68% of the EU-25 production in 2004.

Sector:	Total catches
Years:	1950 onwards
Periodicity:	annual
Species:	individually identified species
Areas:	by major fishing areas
Countries:	individually by all countries reporting catches in the area
Unit:	tonnes live weight
Data Source:	Eurostat; For fishing areas, countries and years not covered by EU legislation, FAO.

Commentary

In 2004 EU-25 catches accounted for 6.2% of the world total.

The 10 new Member States only accounted for 9.8% of the EU-25 catches in 2004.

Between 1990 and 2004 the EU-25 catch decreased by an estimated 17%. Over the same period the combined catch of Iceland and Norway increased by 37% and the world catch by 12%.

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

- Sector:** Catches for the Northwest Atlantic (Major Fishing Area 21)
- Years:** 1950 onwards
- Periodicity:** annual
- Species:** individually identified species
- Areas:** by NAFO divisions and sub-divisions (1960 onwards) and by major fishing area (1950 onwards)
- Countries:** individually by all countries reporting catches in the area
- Unit:** tonnes live weight
- Data Source:** Eurostat;
For fishing areas, countries and years not covered by EU legislation, NAFO and FAO.

Commentary

Due to the restriction of EU fishing to international waters and the imposition of stringent management measures, the EU-15 catch in the Northwest Atlantic is under 5% of the 1.2 million tonnes caught in 1968.

16% of the EU-15 catches from all areas were taken in the Northwest Atlantic in 1968. In 2004 this had fallen to under 1%.

Countries:	individually by all countries reporting catches in the area
Unit:	tonnes live weight
Data Source:	Eurostat; For fishing areas, countries and years not covered by EU legislation, ICES and FAO.

Commentary

The Northeast Atlantic is the most important fishing area for the EU-25 Member States with 72% of their catches being taken from this area in 2004.

The EU-25 accounted for 43% of the total catch in the area in 2004 (7.6% of the EU-25 catch was made by the 10 new Member States). Iceland and Norway were the other main fishing nations (42% of the total for the area).

In the period 1990-2004 EU-25 catch in the Northeast Atlantic has fallen by around 7%. On the other hand, the combined catch of Iceland and Norway has risen by 38% in the same period.

Commentary

EU-25 Member States accounted for 17% of the total catches in the Eastern Central Atlantic in 2004.

EU-15 catches in 2004 showed a 18% decrease to those in 1990. This compares with a drop of 16% in the total catches from the area in the same period.

In 2004 10% of EU-25 catches were taken in the Eastern Central Atlantic.

Commentary

In 2004 the EU-25 accounted for 32% of the total catch from the Mediterranean. 53% of the EU-25 catch was by Italy.

The EU-25 catch decreased by about 20% in the period 1990-2004. In the same period the total catch in the Mediterranean increased by 11%.

Turkey accounted for 33% of the total catch in the Mediterranean in 2004, a little more than the combined catch of the EU-25 Member States (32%).

Areas:	for the major fishing area
Countries:	individually by all countries reporting catches in the area
Unit:	tonnes live weight
Data Source:	Eurostat; For fishing areas, countries and years not covered by EU legislation, FAO.

Commentary

The EU-25 Member States accounted for only 2.7% of the total catch in the Southwest Atlantic in 2004. Of this, 90% was caught by one Member State, Spain.

In the period 1990-2004 the EU-25 catch decreased by 81%. A major cause of this was the virtual withdrawal of the new Member States (Estonia, Latvia, Lithuania and Poland) from the fisheries of the region.

On the other hand, the EU catch in 2005 showed an increase of over 75% compared to 2004, mainly due to an increased Spanish catch.

Total catches in the Southwest Atlantic decreased by 8% since 1990.

Commentary

EU-25 catches in the Southeast Atlantic in 2004 were less than 1% of the total catch in the area. Only three Member States (Poland, Portugal and Spain) fished in the area in 2004.

This contrasts with the situation in 1990 when EU-25 catches accounted for 11% of the total. Six Member States fished in the area in that year and the EU-25 catch was over 8 times greater than in 2004.

While the EU catch fell sharply in the period 1990-2004, the total catch in the area rose by 21% in the same period.

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

Sector: Catches in inland waters (Major Fishing Areas 01-08)
Years: 1950 onwards
Periodicity: annual
Species: individually identified species
Areas: by continent
Countries: individually by all reporting countries
Unit: tonnes live weight
Data Source: Eurostat;
For fishing areas, countries and years not covered by EU legislation, FAO.

Commentary

In 2004 the EU-25 Member States catches from inland waters only accounted for a little over 1% of the world catch from such waters and only 2% of the catches from all EU-25 fisheries.

The contribution of the 10 new Member States to the EU-25 total from inland fisheries (32%) was relatively high compared with their contribution to the catches from marine areas (9%).

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

- Sector:** Landings
Years: from January 1992, at the earliest
Periodicity: monthly
Products: all landings of fishery products, with details of products covered by EU Market Management regime
Countries: EEA member countries only
Unit: tonnes product weight and value (ECU/EUR)
Data Source: Eurostat

Commentary

Spain, Italy and France have the highest value landings in the EU.

Norway's landings have a value higher than that of all the EU countries except Spain.

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

- Sector:** Foreign trade in fishery products
Years: from 1976 at the earliest
Periodicity: annual
Products: for 10 major groups of fishery products
Flow: imports, exports and trade balance
Countries: all reporting countries
Unit: tonnes product weight and value (ECU/EUR)
Data Source: Eurostat (Comext for EU-25 and EU-Candidate countries) and FAO (for the other countries)

Commentary

The EU-25 Member States have an overall negative balance in trade in fishery products, both in terms of volume and value.

Only six of the EU-25 Member States (Denmark, Estonia, Ireland, Latvia, Lithuania (since 2004) and the Netherlands) have positive balances in terms of the value.

France, Germany, Italy, Spain and the United Kingdom are the biggest net importers of the EU Member States.

Iceland and Norway are big net exporters of fishery products.

* From 1997 the French data (and hence EU and EEA totals) include vessels of the French Overseas Departments

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

- Sector:** Fishing fleet
- Years:** from 1990 at the earliest
- Periodicity:** annual
- Parameters:** by tonnage, length, power and age classes
- Countries:** EEA member countries only
- Unit:** number, total tonnage (tonnes GRT and/or GT) and total power (kW)
- Data Source:** Eurostat (Statistical Register up-dated from the DG FISH administrative file.)

Commentary

Of the EU-15 Member States, Greece has the largest number of fishing vessels. However on average these vessels are small (median power of 5 KW) compared with the vessels from most of the other countries (e.g. Spain with a median power of 82 KW).

Since 1995 the EU-15 fishing fleet has decreased by 19% in number, by 12% in total tonnage and 17% in total power.

Sector:	Employment
Years:	from 1970 at the earliest
Periodicity:	annual
Coverage:	employment as fishers or in aquaculture
Detail:	by sector of fishing (eg high seas, coastal), full time/part-time and by sex
Countries:	all countries
Unit:	number
Data Source:	Eurostat and FAO

Commentary

Great care has to be taken in analysing these data because there is a lack of harmonisation in the definitions and concepts used in the collection and compilation of the data by the national authorities.

However, in the period since 1990 there has been a general reduction in the number of fishermen in most of the countries cited.

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

Sector: Supply balance sheets
Years: 1961-2001
Periodicity: annual
Products: total fishery products
Countries: all countries
Unit: tonnes or kg live weight
Data Source: FAO (latest available data are for 2001)

Commentary

The per capita supply of fishery products in the EU-15 is over 20% greater than that for the world as a whole.

Portugal and Spain have by far the greatest per capita supply of fishery products in the EU-25 Member States.

The per capita supply of the 10 new Member States (10.5 kg/head) is less than half that of the EU-15 Member States (23.7 kg/head).
