**1976-1982**

## Introduction

Eurostat regularly publishes consumer price indices for the Member States and certain other countries, covering the overall index and detailed indices for eight main groups.

In principle, the indices for the countries are reproduced as they are published by the countries, although studies into the comparability of these price indices have shown that they are not entirely comparable.

The base year of the national indices varies from country to country but Eurostat transformed the indices to one fixed reference year, which is at present 1975. This transformation is a simple rebasing of each series independently.

The national indices converted to base 1975 are then used for the calculation of a Community index.

In 1983 Eurostat finished a programme with the assistance of the Member States, to extend the number of detailed series of the consumer price index, broken down according to the classification used in the Community and United Nations systems of national accounts (ESA/SNA).

The purpose of this publication is to present these detailed series as furnished by the individual countries.

### Detailed series

The detailed series of consumer price statistics included in the Eurostat programme are based on the classification for the breakdown of the final consumption of households in the ESA and in the comparison of the purchasing power parities and the real values. It is a classification of consumption by function and not by groups of products. This classification is not necessarily used by the Member States for the calculation of their national index, which means that in most of the countries it was necessary to use a key to switch from the national series to the common classification.

The transposition from the national series to the series included in the Eurostat programme has been carried out by the Member States or by Eurostat with the approval of the Member States.

The detailed series within the eight main groups are not always exhaustive: in principle only the most important series have been selected. As to Group 5 (Health costs) Eurostat will not publish detailed figures for this group since the indices are far from comparable owing to the different ways national health services are organized in the Member States.

As to Group 31 (Rent and water charges) series are not available for Ireland, Luxembourg and Portugal. For Ireland the consumer price index for rents includes imputed rents which are calculated in a way which differs considerably from the methods used in the other countries (the index takes into account the payment of interest and mortgage rather than imputed rents). It should be noted however that for the UK the definition of this function is similar. For Luxembourg and Portugal no index exists.

Most of the EC countries publish a monthly index, whereas the index for Ireland is published four times a year (15.2, 15.5, 15.8 and 15.11).

For Greece monthly figures are available only from January 1979 onwards; annual figures are available for the period 1975-78.

For Spain only the indices for the eight main groups are available, whereas for Portugal detailed series are available also for most of the sub-groups, except for recreational goods. Monthly figures for 1976 are not available. For the United States the eight main groups are presented as well as indices for a limited number of sub-groups.

The corresponding ESA codes are given in the 'Contents'. The group 'Energy products' comprises the following groups: 32 (all energy products for home consumption: electricity, gas, fuel, coal, wood, etc.) and 623 (all sorts of petrol, diesel, gas, etc. used for private cars).

The base year for the different Member States varies and in 1982 was as follows:

FR Germany	1976
France	1970
Italy	1980
Netherlands	1975
Belgium	July 1974-June 1975
Luxembourg	1965
United Kingdom	15 January 1974
Ireland	15 November 1975
Denmark	1975
Greece	1974
Spain	1976
Portugal	1976
United States	1967

The indices for the individual countries mentioned above have been converted from the national base year to the Eurostat base 1975 = 100.

The Community indices are weighted arithmetic averages of the national indices. Such an EUR-10 index has been calculated for the general index, for the eight main groups and for all the sub-groups.

The weights used are the real values derived from the calculation of the purchasing power parities. These real values are available for 1980 and have been published by Eurostat in *Comparison in real values of the aggregates of ESA*. These values for 1980 have been extrapolated back to 1975 with the aid of the relative price index of each series.

*Note:* All figures published in this bulletin are available in Eurostat's databank Cronos.

It is also brought to the attention of interested users that there exist indices for four sub-groups of food products for each country which are not published in this bulletin, e.g.

1. Dairy products (excl. eggs, margarine, oils and fats);
2. Eggs;
3. Fruits and vegetables (excl. potatoes);
4. Potatoes.

The figures can be obtained from Eurostat on request.

## Introduction

L'Eurostat publie régulièrement des indices de prix à la consommation des pays membres et de certains pays tiers. Il s'agit de l'indice total ainsi que des indices détaillés pour huit grands groupes.

En principe, les indices des pays sont pris tels quels, donc sans modifier ceux déjà publiés par les pays, malgré le fait que des études concernant la comparabilité de ces indices de prix ont montré qu'ils ne sont pas complètement comparables.

Étant donné que l'année de base des indices nationaux varie selon les pays, l'Eurostat a rebasé les indices sur une année de référence commune, qui est actuellement 1975. Cette transformation est une opération de conversion simple de chaque série séparément.

Les indices nationaux convertis sur base 1975 sont ensuite utilisés pour en déduire un indice communautaire.

Depuis l'année 1983, l'Eurostat a mis au point un programme avec les pays membres afin d'augmenter le nombre de séries détaillées de prix; il s'agit de séries qui sont des positions de la classification commune utilisée au niveau communautaire dans le cadre de la comptabilité nationale (SEC).

La présente publication veut présenter ces séries détaillées fournies par les pays. Elles sont données en annexe.

### Les séries détaillées

Les séries détaillées de prix comprises dans le programme de l'Eurostat ont été choisies en fonction de la classification utilisée dans le cadre du SEC pour la décomposition de la consommation finale des ménages et également dans la comparaison des parités de pouvoir d'achat et des valeurs réelles. Il s'agit d'une classification de la consommation par fonction et pas par groupe de produits. Elle n'est pas nécessairement utilisée par les pays membres dans le cadre des indices de prix à la consommation et, par conséquent, dans la plupart des pays membres, il a fallu créer une clé de passage entre la classification commune et celle retenue par les pays afin de pouvoir constituer les séries d'indices de prix.

Ce travail de passage entre les séries nationales et les séries incluses dans le programme communautaire a été effectué par les pays membres ou par l'Eurostat avec l'approbation des pays.

Les séries à l'intérieur des huit groupes principaux ne sont pas toujours exhaustives; en principe, seules les séries les plus importantes ont été choisies. En ce qui concerne le groupe 5, aucun indice de prix détaillé n'a été retenu, car les indices sont très peu comparables entre les pays membres du fait que l'organisation institutionnelle de ces services est très différente pour ces pays.

En ce qui concerne la rubrique 31 « loyers et charges d'eau », les séries pour l'Irlande, le Luxembourg et le Portugal font défaut. Pour l'Irlande, l'indice de prix des loyers est calculé pour la partie des loyers fictifs calculée selon des règles assez différentes de celles utilisées dans la plupart des autres pays (en effet, l'indice tient compte des paiements d'intérêt et d'amortissement au lieu des loyers fictifs). Il faut cependant remarquer que, pour le Royaume-Uni, l'indice est défini de la même façon. Pour le Luxembourg et le Portugal, l'indice des loyers n'est pas disponible.

Pour la plupart des pays, l'indice de prix est mensuel, tandis que, pour l'Irlande, l'indice est calculé quatre fois par an (15 février, 15 mai, 15 août et 15 novembre).

En ce qui concerne la Grèce, les données mensuelles détaillées sont seulement disponibles à partir de janvier 1979 et, pour la période 1975-1978, les indices annuels sont fournis.

Pour l'Espagne, seuls les indices des huit groupes principaux sont disponibles. Les indices détaillés pour le Portugal sont disponibles, à l'exception des mois de 1976, tandis que, pour les États-Unis, seulement certaines séries détaillées ont été reprises.

La correspondance avec le code SEC a été mentionnée dans la table des matières. La rubrique « Énergie » est un regroupement des codes suivants: 32 (tous les produits énergétiques pour la consommation privée: électricité, gaz, mazout, charbon, bois, etc.) et le groupe 623 (toutes sortes d'essence et de lubrifiants pour voitures privées, (essence, Diesel, gaz).

L'année de base des différents pays varie, le tableau ci-après présente les années de base appliquées en 1982.

RF d'Allemagne	1976
France	1970
Italie	1980
Pays-Bas	1975
Belgique	juillet 1974-juin 1975
Luxembourg	1965
Royaume-Uni	15 janvier 1974
Irlande	15 novembre 1975
Danemark	1975
Grèce	1974
Espagne	1976
Portugal	1976
États-Unis	1967

Les indices par rapport à ces périodes de base ont été convertis sur base 1975.

Les indices nationaux ont été agrégés en indice communautaire. Pour ce faire, l'indice pour la Communauté a été calculé comme la moyenne arithmétique pondérée des indices nationaux. Ce calcul a été fait pour l'indice total, pour les indices des huit groupes et pour chaque indice détaillé.

La pondération de chaque pays pour le calcul communautaire est celle relative aux valeurs réelles déduites des calculs de parités de pouvoir d'achat. Ces valeurs réelles sont disponibles pour 1980 et publiées par l'Eurostat dans « Comparaison en valeurs réelles des agrégats du SEC-1980 ». Ces valeurs de 1980 ont été rétrapolées jusqu'à 1975 à l'aide des indices de prix relatifs à la série concernée.

*NB:* Tous les chiffres publiés dans ce bulletin sont disponibles dans la banque de données « Cronos » de l'Eurostat.

Nous signalons également aux utilisateurs intéressés qu'il existe des indices par pays pour quatre sous-groupes des produits alimentaires qui ne figurent pas dans le bulletin, à savoir:

- 1) produits laitiers (sauf œufs, margarine, huiles et graisses);
- 2) œufs;
- 3) fruits et légumes (sauf pommes de terre);
- 4) pommes de terre.

Les données peuvent être obtenues sur demande.
