Eurostat hat die Aufgabe, den Informationsbedarf der Kommission und aller am Aufbau des Binnenmarktes Beteiligten mit Hilfe des europäischen statistischen Systems zu decken.

Um der Öffentlichkeit die große Menge an verfügbaren Daten zugänglich zu machen und Benutzern die Orientierung zu erleichtern, werden zwei Arten von Publikationen angeboten: Statistische Dokumente und Veröffentlichungen.

Statistische Dokumente sind für den Fachmann konzipiert und enthalten das ausführliche Datenmaterial: Bezugsdaten, bei denen die Konzepte allgemein bekannt, standardisiert und wissenschaftlich fundiert sind. Diese Daten werden in einer sehr tiefen Gliederung dargeboten. Die Statistischen Dokumente wenden sich an Fachleute, die in der Lage sind, selbständig die benötigten Daten aus der Fülle des dargebotenen Materials auszuwählen. Diese Daten sind in gedruckter Form und/oder auf Diskette, Magnetband, CD-ROM verfügbar. Statistische Dokumente unterscheiden sich auch optisch von anderen Veröffentlichungen durch den mit einer stilisierten Graphik versehenen weißen Einband.

Veröffentlichungen wenden sich an eine ganz bestimmte Zielgruppe, wie zum Beispiel an den Bildungsbereich oder an Entscheidungsträger in Politik und Verwaltung. Sie enthalten ausgewählte und auf die Bedürfnisse einer Zielgruppe abgestellte und kommentierte Informationen. Eurostat übernimmt hier also eine Art Beraterrolle.

Für einen breiteren Benutzerkreis gibt Eurostat Jahrbücher und periodische Veröffentlichungen heraus. Diese enthalten statistische Ergebnisse für eine erste Analyse sowie Hinweise auf weiteres Datenmaterial für vertiefende Untersuchungen. Diese Veröffentlichungen werden in gedruckter Form und in Datenbanken angeboten, die in Menütechnik zugänglich sind.

Um Benutzern die Datensuche zu erleichtern, hat Eurostat Themenkreise, d. h. eine Untergliederung nach Sachgebieten, eingeführt. Daneben sind sowohl die Statistischen Dokumente als auch die Veröffentlichungen in bestimmte Reihen, wie zum Beispiel „Jahrbücher“, „Konjunktur“, „Methoden“, untergliedert, um den Zugriff auf die statistischen Informationen zu erleichtern.

Y. Franchet
Generaldirektor

It is Eurostat's responsibility to use the European statistical system to meet the requirements of the Commission and all parties involved in the development of the single market.

To ensure that the vast quantity of accessible data is made widely available, and to help each user make proper use of this information, Eurostat has set up two main categories of document: statistical documents and publications.

The statistical document is aimed at specialists and provides the most complete sets of data: reference data where the methodology is well-established, standardized, uniform and scientific. These data are presented in great detail. The statistical document is intended for experts who are capable of using their own means to seek out what they require. The information is provided on paper and/or on diskette, magnetic tape, CD-ROM. The white cover sheet bears a stylized motif which distinguishes the statistical document from other publications.

The publications proper tend to be compiled for a well-defined and targeted public, such as educational circles or political and administrative decision-makers. The information in these documents is selected, sorted and annotated to suit the target public. In this instance, therefore, Eurostat works in an advisory capacity.

Where the readership is wider and less well-defined, Eurostat provides the information required for an initial analysis, such as yearbooks and periodicals which contain data permitting more in-depth studies. These publications are available on paper or in videotext databases.

To help the user focus his research, Eurostat has created 'themes', i.e. subject classifications. The statistical documents and publications are listed by series: e.g. yearbooks, short-term trends or methodology in order to facilitate access to the statistical data.

Y. Franchet
Director-General

Pour établir, évaluer ou apprécier les différentes politiques communautaires, la Commission européenne a besoin d'informations.

Eurostat a pour mission, à travers le système statistique européen, de répondre aux besoins de la Commission et de l'ensemble des personnes impliquées dans le développement du marché unique.

Pour mettre à la disposition de tous l'importante quantité de données accessibles et faire en sorte que chacun puisse s'orienter correctement dans cet ensemble, deux grandes catégories de documents ont été créées: les documents statistiques et les publications.

Le document statistique s'adresse aux spécialistes. Il fournit les données les plus complètes: données de référence où la méthodologie est bien connue, standardisée, normalisée et scientifique. Ces données sont présentées à un niveau très détaillé. Le document statistique est destiné aux experts capables de rechercher, par leurs propres moyens, les données requises. Les informations sont alors disponibles sur papier et/ou sur disquette, bande magnétique, CD-ROM. La couverture blanche ornée d'un graphisme stylisé démarque le document statistique des autres publications.

Les publications proprement dites peuvent, elles, être réalisées pour un public bien déterminé, ciblé, par exemple l'enseignement ou les décideurs politiques ou administratifs. Des informations sélectionnées, triées et commentées en fonction de ce public lui sont apportées. Eurostat joue, dès lors, le rôle de conseiller.

Dans le cas d'un public plus large, moins défini, Eurostat procure des éléments nécessaires à une première analyse, les annuaires et les périodiques, dans lesquels figurent les renseignements adéquats pour approfondir l'étude. Ces publications sont présentées sur papier ou dans des banques de données de type videotex.

Pour aider l'utilisateur à s'orienter dans ses recherches, Eurostat a créé les thèmes, c'est-à-dire une classification par sujet. Les documents statistiques et les publications sont répertoriés par série — par exemple, annuaire, conjoncture, méthodologie — afin de faciliter l'accès aux informations statistiques.

EXPLANATORY NOTE

The data for Germany for both the 1989/90 and the 1993 structural surveys refer to the territory after unification on 3 October 1990. Data from earlier structural surveys refer to the territory before unification.

FURTHER INFORMATION

The main results of the 1993 Community agricultural structural survey can be found in the publication entitled "Farm structure - 1993 survey: main results" (Theme 5, Series C). The results of the 1975, 1979/80, 1983, 1985 and 1987 structural surveys are also available on CD ROM.

INTRODUCTION

The purpose of the Community farm structure surveys is to obtain reliable data on the structure of agricultural holdings in the European Union of the Twelve, particularly as regards land use, livestock farming and the labour force.

Community structural surveys are carried out regularly at roughly two-year intervals, the first one was conducted in 1966/67. Further surveys followed in 1970/71, 1975, 1977, 1979/80, 1983, 1985, 1987, 1989/90 and 1993. About every ten years (1970/71, 1979/80 and 1989/90), a full survey is carried out in the form of an agricultural census.

The 1989/90 structural survey was the first since 1977 in which the Member States (with the exception of Germany) provided Eurostat with individual data for the various holdings rather than tabular results. Only Germany transmitted the tabular results direct to Eurostat.

The individual data transmitted by the individual Member States are checked for completeness and plausibility using the EUROFARM system. The standard and ad hoc tables are then produced and stored in the EUROFARM databank. The EUROFARM system is a set of data banks to be used for processing Community surveys on the structure of agricultural holdings for the requirements of national and Community agricultural policy.

The 1993 Community farm structure survey was the tenth in the series of the Community surveys. It was carried out as a sample survey in the majority of the Member States, but Belgium, Luxembourg and the Netherlands provided Eurostat with individual data from a full survey.

The legal basis for the conducting of Community surveys on the structure of agricultural holdings over the period 1988 to 1997 is Regulation (EEC) No 571/88 of 29 February 1988¹⁾.

¹⁾ OJ No L 56, 2.3.1988, p.1.

I. Structure of agricultural holdings

Agricultural holdings

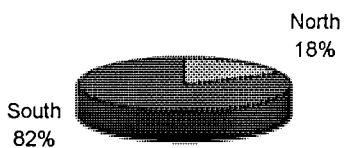

In 1993, there were about 7.3 mill. agricultural holdings in the European Union, corresponding to a reduction of around 9% compared with the 8 mill. in 1989/90. Over the same period, the number of holdings in the southern Member States declined by almost 10%, while the reduction in the northern Member States was somewhat slighter at about 6%.

In 1993, there were just under 6 mill. agricultural holdings in the southern Member States - over 80% of the total in the European Union of the Twelve, over half of them being in Italy and Spain. The proportion of the total UAA in the southern Member States was, however, only around 60%.

Breakdown of agricultural holdings, 1993

Change in number of holdings

Breakdown of utilized agricultural area (UAA), 1993

I. Structure of agricultural holdings

Utilized agricultural area

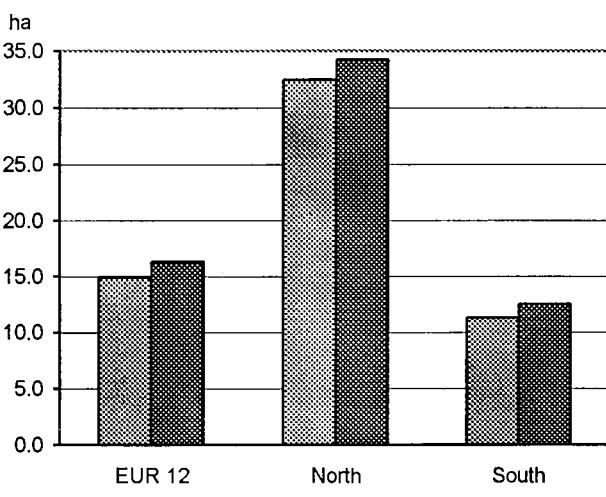

The utilized agricultural area (UAA) in the European Union of the Twelve fell by less than 1% from around 119.6 mill. ha to around 119.0 mill. ha over the period 1989/90 to 1993. The utilized agricultural area (UAA) dropped less sharply over this period than the number of holdings with the result that the average size of holding in the European Union of the Twelve increased from 15.0 ha to 16.4 ha. There was a marked increase of almost 4% in the utilized agricultural area (UAA) from 1987 to 1989/1990 in the European Union of the Twelve. This was due to the fact that the data for Germany for the 1989/90 and 1993 structural surveys related to the territory after unification of 3 October 1990, whereas data from previous surveys refer to the former territory.

An examination of the utilized agricultural area (UAA) per holding reveals the structural differences between the northern and southern Member States. Whereas the average size of holdings in the northern Member States was 34.2 ha in 1993, the holdings in the southern Member States were substantially smaller with an average of 12.5 hectare.

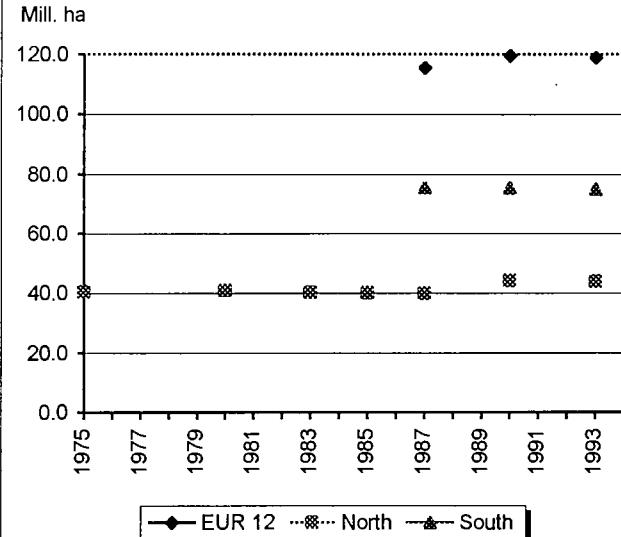

Utilized agricultural area (UAA)

Utilized agricultural area (UAA) per holding

Change in utilized agricultural area (UAA)

I. Structure of agricultural holdings

Size structure of the holdings

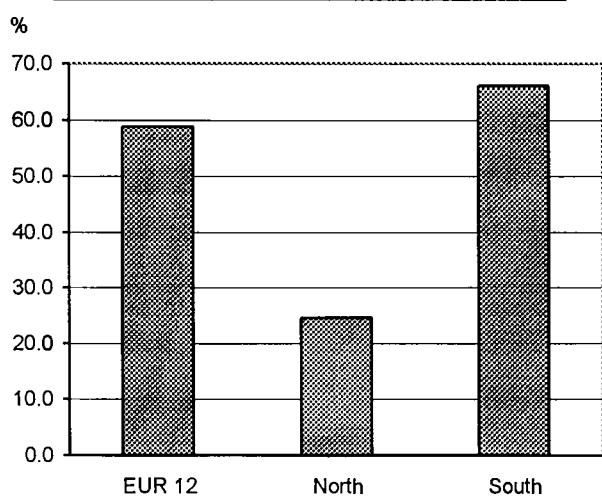

The differences in size structure of the holdings between the northern and southern Member States becomes even clearer if one considers the proportion of holdings in the size class less than 5 ha UAA. Around two thirds of total holdings are in this size class in the southern Member States compared with about a quarter in the northern Member States.

The proportion of holdings in the size class 100 ha UAA and over is about 2% in the southern Member States, compared with about 5% in the northern Member States.

I. Structure of agricultural holdings

Economic size classes

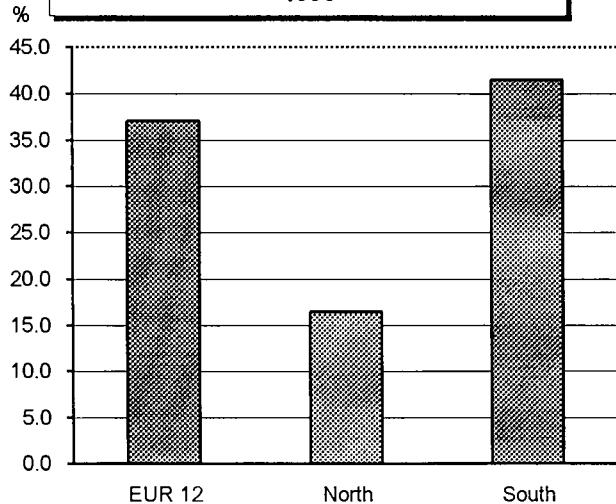

The total standard gross margin is used to categorise holdings by economic size class. The standard gross margin of an agricultural characteristic is the gross production calculated in terms of production volume multiplied by price, minus the variable special costs, using standardised yields, prices and costs. The total standard gross margin for a given holding is calculated by adding together the standard gross margins for the individual characteristics.

The economic size is the total standard gross margin of the holding in question for a given period (the average of three years), expressed in European size units (ESU). At present, one ESU corresponds to ECU 1 200.

I. Structure of agricultural holdings

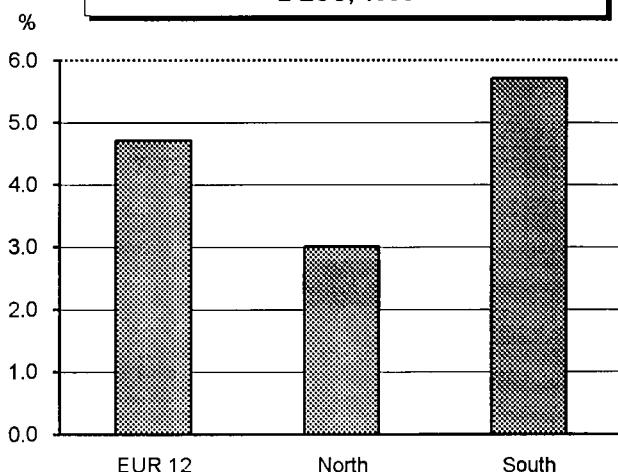

Economic size classes

In the European Union of the Twelve, a relatively small number of holdings with a large production capacity account for a significant proportion of the utilized agricultural area (UAA). However, there are substantial differences between the northern and southern Member States. For example, in the northern Member States, around 7% of holdings with a standard gross margin of 100 ESU and over accounted for almost a third of the utilized agricultural area (UAA), whereas in the southern Member States, around 1% of total holdings were in this size category and accounted for around 16% of the utilized agricultural area (UAA).

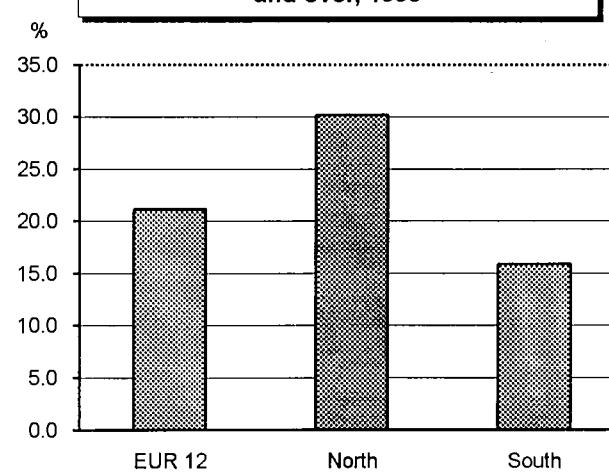

Utilized agricultural area (UAA) by size classes of standard gross margin, 1993

I. Structure of agricultural holdings

Average size of holding

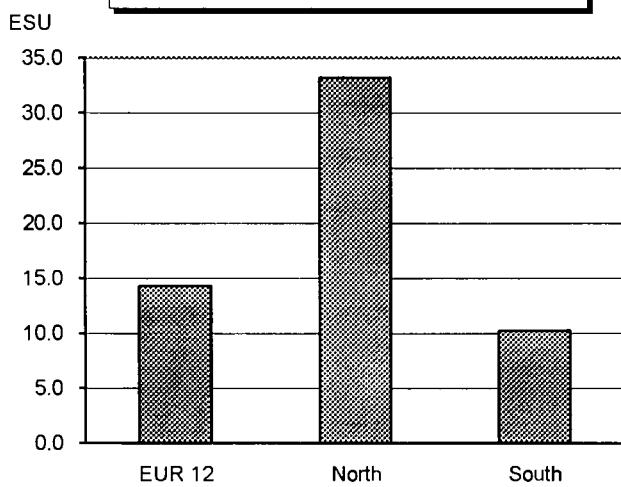

There are great differences in the standard gross margin (SGM) per holding between the northern and southern Member States. Whereas the average in 1993 was 33.2 ESU per holding in the northern Member States, it was only 10.3 ESU in the southern Member States.

The average SGM per 100 ha UAA can be used as a yardstick for the productivity of agriculture in terms of area. The differences between the northern and southern Member States are less marked as regards production by area. However, an examination of the individual Member States shows that the Netherlands has the highest SGM per 100 hectare UAA. This is because of the high concentration of specialized pig and poultry farms in the Netherlands, which correspond to a small utilized agricultural area (UAA). In addition, there are many specialized horticultural holdings.

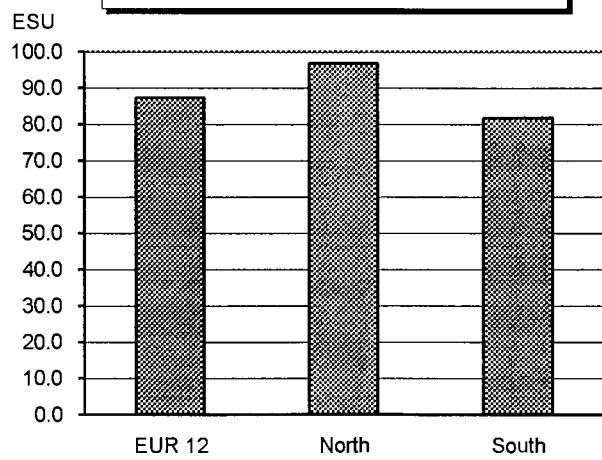

Structure of agricultural holdings, 1993

I. Structure of agricultural holdings

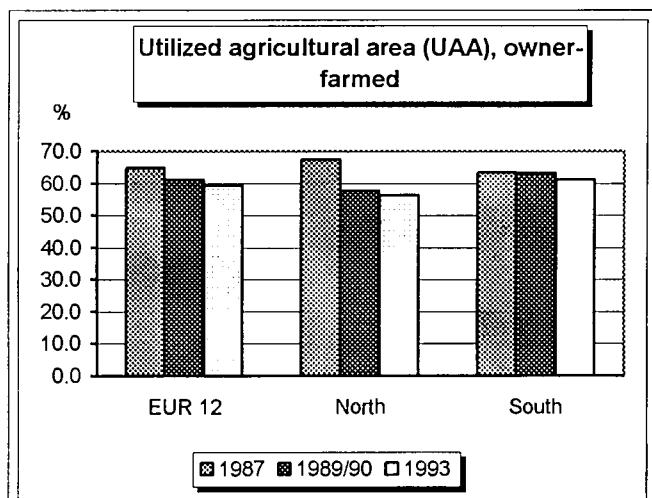

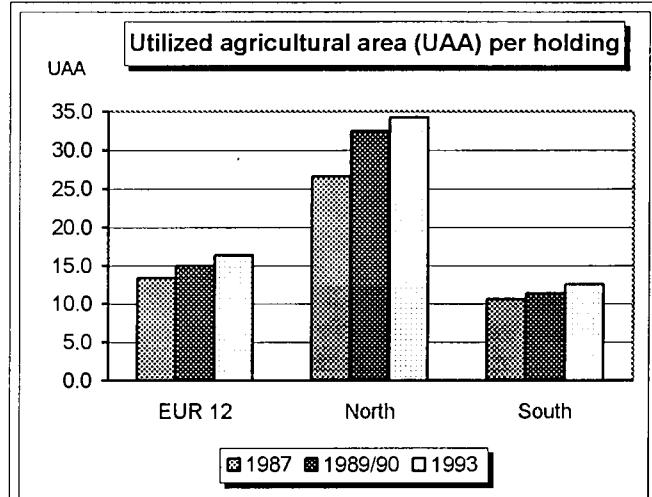

Type of tenure

With the structural changes in the European Union of the Twelve, tenant farming is on the increase, the proportion of owner-farmed utilized agricultural area (UAA) fell steadily between 1987 and 1993 from around 65% to around 60%.

In the northern Member States, this reduction in owner-farmed area fell from as much as 67% to as little as 56% over the same period, partly because of German unification, as the proportion of owner-farmed utilized agricultural area (UAA) is substantially smaller in the new "Länder" than in the old ones.

I. Structure of agricultural holdings

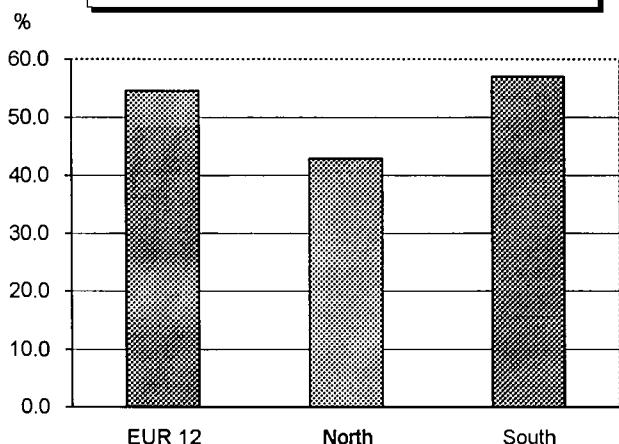

Less-favoured areas

In 1993, around 62.1 mill. ha, or 52% of the total of around 119.0 mill. ha utilized agricultural area (UAA) in the European Union of the Twelve were in less-favoured areas. In the southern Member States, the proportion of utilized agricultural area (UAA) in less-favoured areas was around 57%, compared with around 43% in the northern Member States.

II. Land use

Types of crops

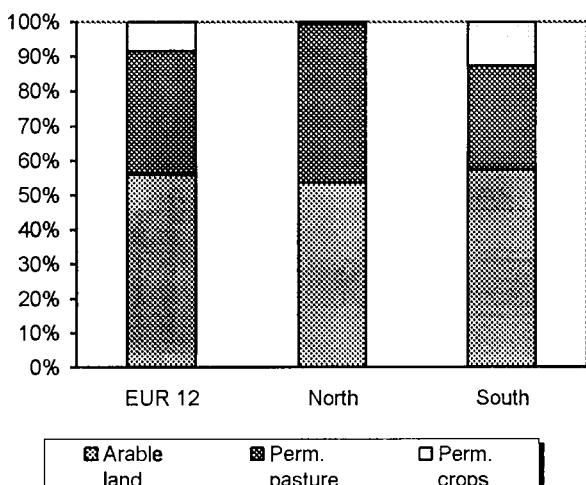

Of the total 119.0 mill. or so ha utilized agricultural area (UAA) in the European Union of the Twelve, around 66.5 mill. hectare, or 56%, was used for field crops in 1993. Around 36% of the utilized agricultural area (UAA) was permanent pasture and 8% was under permanent crops.

In the northern Member States, the proportion of the utilized agricultural area (UAA) under field crops was around 54%. Around 46% of the utilized agricultural area (UAA) was used as permanent pasture and only 1% for permanent crops. In the southern Member States, around 57% of the utilized agricultural area (UAA) was used for field crops, around 30% as permanent pasture and around 13% for permanent crops.

Cereals

Set-aside under the reform of the CAP was largely responsible for the 10% reduction, by round 3.4 mill. ha, in the area under cereals in the European Union of the Twelve over the period 1989/90 to 1993. Over the same period, the number of holdings growing cereals fell by over 15%, from around 3.7 mill. to around 3.1 million.

In the northern Member States, the area under cereals declined by around 9% and the number of holdings growing cereals by around 10%. In the southern Member States, the area under cereals declined by around 10% and the number of holdings growing cereals by around 17%.

II. Land use

Cereals

Of the total of approx. 32.2 mill. ha under cereals in the European Union of the Twelve in 1993, about 37% were under common wheat and about 31% under barley. Common wheat and barley were also the most important types of cereal in the northern Member States, accounting for 83% of the total area under cereals. In the southern Member States, common wheat was the most important type of cereal, with 32%, followed by barley, with 27%, grain maize (16%) and durum wheat (14%).

Type of cereals, 1993

II. Land use

Dried vegetables

In 1993, about 1.5 mill. ha of pulses were grown in the European Union of the Twelve. This corresponds to only about 2% of the total arable land. The production of dried vegetables in the European Union of the Twelve fell by about 1% over the period 1989/90 to 1993. In the northern Member States, there was a sharp increase in the area under dried vegetables, of about 11%, compared with a reduction of 6% in the southern Member States.

II. Land use

Root crops

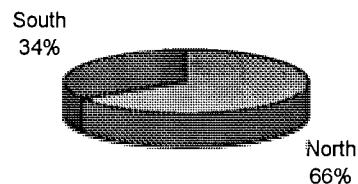

The most important root crop in the European Union of the Twelve, in terms of area, is sugar-beet, which accounted for 58% of the total root crop area in 1993. In the northern Member States the area used for sugar beet production accounted for 52% of the total, compared with two thirds in the southern Member States.

Potato production was concentrated in the northern Member States, accounting for about two thirds of the area under potatoes. Over a quarter of the area under potatoes in the European Union was in Germany.

II. Land use

Industrial plants

After cereals, the second most important field crop in the European Union of the Twelve is industrial crops, which accounted for about 10% of the total arable land in 1993, with about 8% of the total in the northern Member States and some 11% in the southern Member States.

Production of oilseeds increased by about 14% during the period 1989/90 to 1993 in the European Union of the Twelve. In the southern Member States, the area increased by about 15%, although in some individual Member States there was an increase and in some others a reduction of the area. In the northern Member States production of oilseeds increased by about 11% over the period 1989/90 to 1993, the biggest increases in terms of area being in the United Kingdom (about 150 000 ha) and Germany (about 96 000 ha).

II. Land use

Vegetables, melons and strawberries

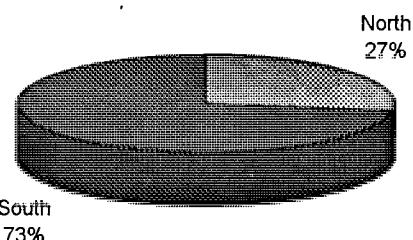

Vegetables, melons and strawberries account for a very small proportion of the total arable land in the European Union of the Twelve, with about 2% in 1993.

It is clear from the breakdown of the area under vegetables, melons and strawberries that these crops are mainly produced in the southern Member States of the European Union of the Twelve which have over 70% of the area under vegetables, melons and strawberries.

II. Land use

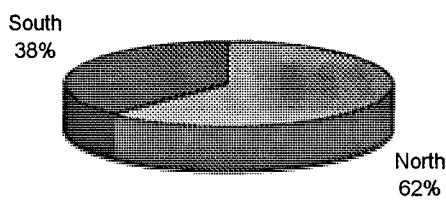

Flowers and ornamental plants

The production of flowers and ornamental plants is concentrated in the northern Member States of the European Union of the Twelve, where over 60% of the total were grown in 1993. It is clear from an examination of the individual Member States that the Netherlands is the main producer in the European Union of the Twelve with over a third of the total area under flowers and ornamental plants. It is followed by Germany with about 13% and the United Kingdom with about 10%.

II. Land use

Permanent crops

Permanent crops are an important product in the European Union of the Twelve. Of the 7.3 mill. holdings recorded in 1993, about 3.9 million, or over half of the total, had permanent crops. In the southern Member States, almost two-thirds of the total holdings had permanent crops, compared with only about 8% in the northern Member States.

Permanent crops are mainly found in the Mediterranean countries, where the climate is more favourable. These countries account for almost 97% of the total area under permanent crops. The largest areas are in Spain and Italy, which together account for about two-thirds of the total area in the European Union of the Twelve.

III. Livestock

Livestock population

Livestock breeding is important in the European Union of the Twelve with about 3.8 mill. holdings, or over half of the total 7.3 million, keeping livestock in 1993. In the northern Member States, almost 80% of holdings kept livestock, compared with just under half in the southern Member States.

In 1993, about 79.4 mill. bovine, 106.8 mill. sheep, 10.3 mill. goats, 107.9 mill. pigs and 973.6 mill. poultry were recorded in the European Union of the Twelve. The regional breakdown is very varied, however:

Pig rearing is largely concentrated in the northern Member States, which account for almost two thirds of the total pig population. The southern Member States account for almost 60% of the total poultry population and as much as 98% of the goat population.

III. Livestock

Livestock population

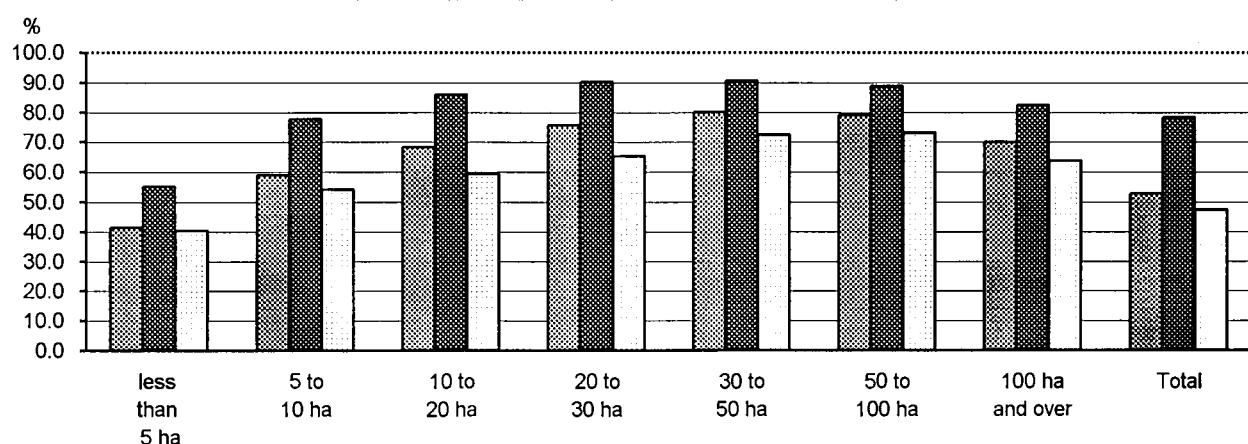

The proportion of holdings keeping livestock varies widely from one size class to another. In the European Union of the Twelve, only one in four of the holdings in the less than 5 ha size class kept livestock in 1993, and only one out of six holdings in the 5 to 10 ha size class. In the 10 to 20 ha class, however, more than two-thirds of the total holdings kept livestock, while in the 30 to 50 ha and 50 to 100 ha classes the figure was as high as 80% and in the 100 ha and over size class about 70 % of the holdings kept livestock.

The situation was similar in both the northern and southern Member States, although the number of holdings keeping livestock was substantially smaller in all size categories in the southern Member States.

Holdings with livestock by size classes of utilized agricultural area (UAA), 1993

III. Livestock

Livestock units

The livestock unit (LSU) was first introduced in the 1989/90 structural survey as a standard unit for measuring the size of cattle herds.

The breakdown of the total population in livestock units over the individual types of livestock shows that in both the northern and the southern Member States bovines, sheep and goats, in other words the area dependent types, accounted for almost two thirds of the livestock units recorded in 1993. Pigs and poultry, which are not area dependent, accounted for a little over one third of the total livestock units in both the northern and southern Member States.

III. Livestock

Livestock units

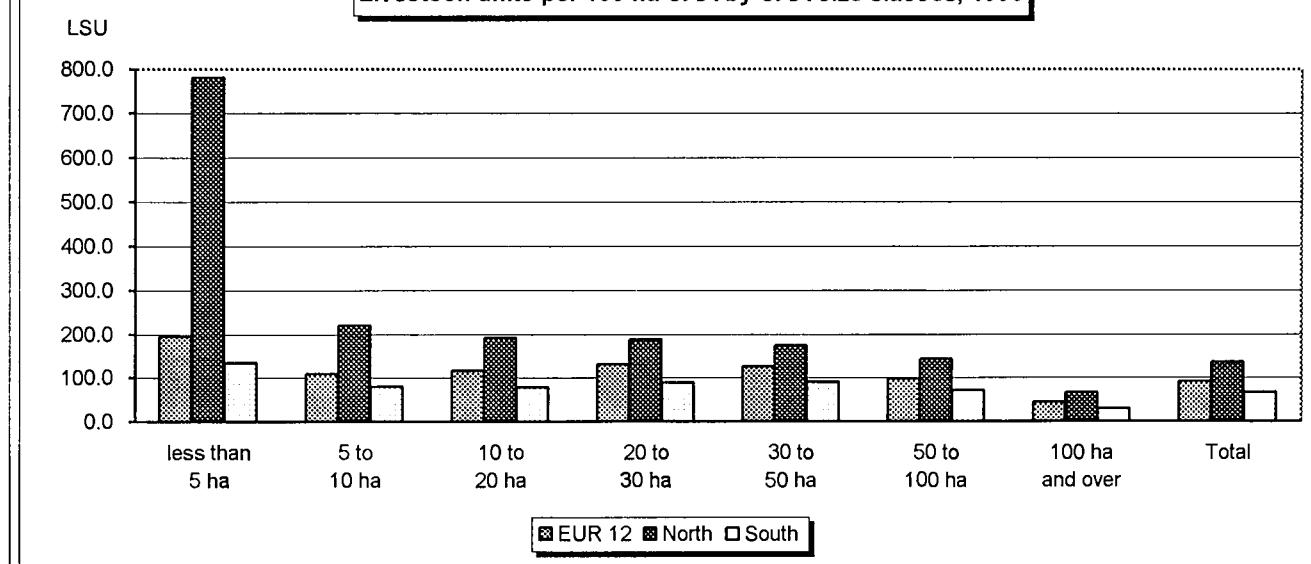

In the northern Member States, the highest concentration of livestock was on holdings of less than 5 ha UAA, with about 780 livestock units (LSU) per 100 ha UAA. This is possibly because of the large proportion of pig and poultry farming on such holdings. In the southern Member States, on the other hand, the livestock concentration on holdings of less than 5 ha UAA is substantially lower with about 134 LSU.

It is noteworthy that the livestock concentration per 100 ha LSU decreases as the size classes increase in both the northern and southern Member States.

Livestock units per 100 ha UAA by UAA size classes, 1993

III.Livestock

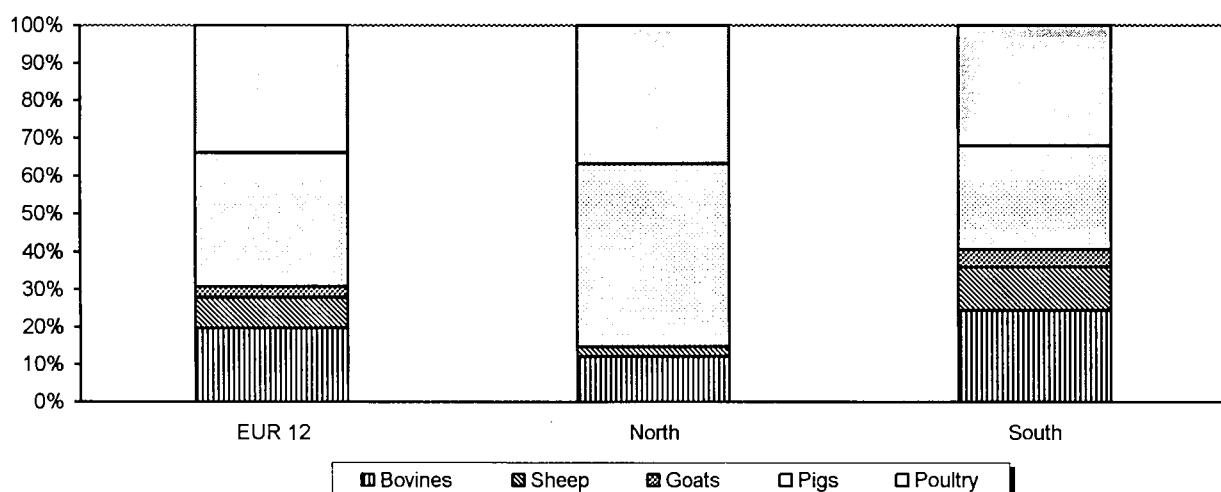

Livestock units

The breakdown of the livestock population in livestock units by individual types of animals on holdings of less than 5 ha UAA shows that in 1993, about 84% of the recorded livestock units in the northern Member States were accounted for by pigs and poultry, which are not area dependent. In the southern Member States, the corresponding figure was about 57%, primarily because pig and poultry production makes smaller demands on the supply of farm grown feedstuffs and requires less manual work.

Proportion of different types of animals in the livestock units (LSU) on the holdings with less than 5 ha UAA, 1993

III. Livestock

Bovines

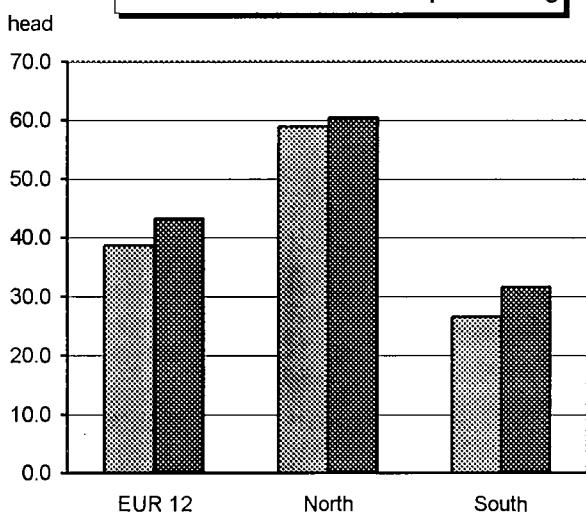

In 1993, there were about 79.4 mill. bovines in the European Union of the Twelve, of which 44.9 mill., or 57%, were in the northern Member States. France and Germany are the leading bovine producers, accounting together for almost half of the total.

The differences in intensity of cattle farming in the northern and southern Member States become apparent from an examination of the number of bovines per 100 ha of fodder area. Whereas in the northern Member States, there were 211.6 head of cattle per 100 ha fodder area in 1993, the figure was only 181.7 in the southern Member States.

Number of bovine animals per holding

Number of bovine animals per 100 ha fodder area

III. Livestock

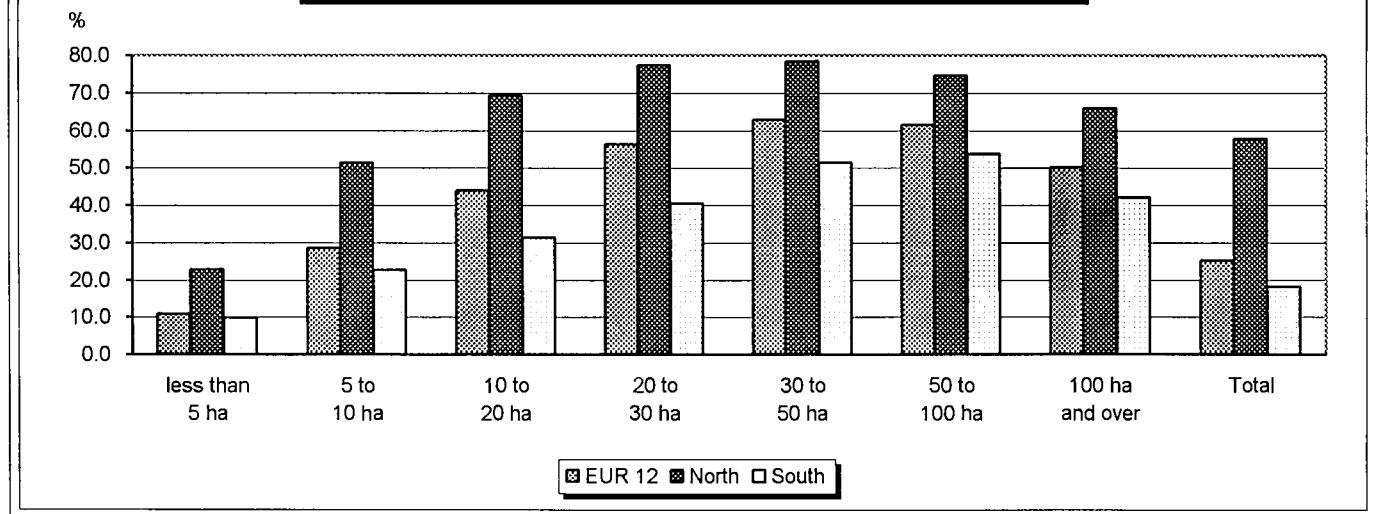

Bovines

The number of holdings breeding bovine animals in the European Union of the Twelve clearly increases as the size classes become larger. In 1993, only one in ten holdings in the size class less than 5 ha UAA kept bovine animals, compared with almost two thirds of holdings in the size class 30 to 50 ha UAA. In both the northern and southern Member States, bovine animals tend to be kept more and more on larger holdings.

Proportion of bovine animals by size classes of UAA, 1993

III. Livestock

Dairy cows

In 1993, there were about 21.5 mill. dairy cows in the European Union of the Twelve, with about 12.5 million, or 58% of the total in the northern Member States.

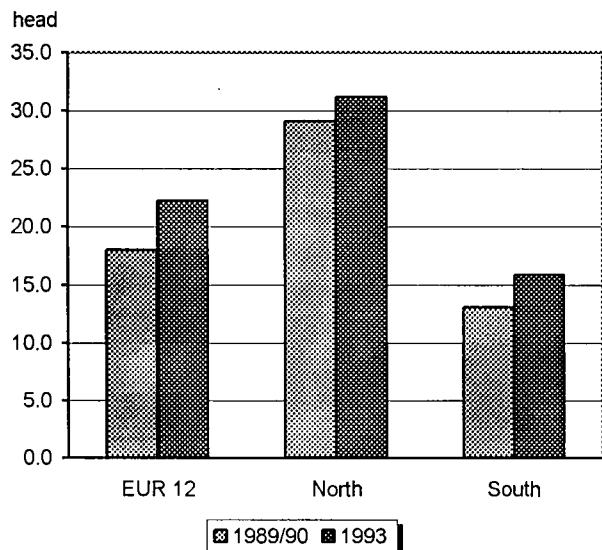

Over the period 1989/90 to 1993, the number of holdings with dairy cows in the European Union of the Twelve fell by almost a quarter, while the number of dairy cows dropped by only about 10% over the same period. This means that the average number of dairy cows per holding increased from 18.0 to 22.3 over the period 1989/90 to 1993. However, this was accompanied by a reduction, from 106.3 to 103.9, in the number of dairy cows per hectare of fodder area over the same period.

Major structural differences can be seen between the northern and southern Member States. In 1993, the average number of dairy cows per holding in the northern Member States was 31.2, compared with only 15.9 in the southern Member States.

Number of dairy cows per holding

Number of dairy cows per 100 ha fodder area

III. Livestock

Dairy cows

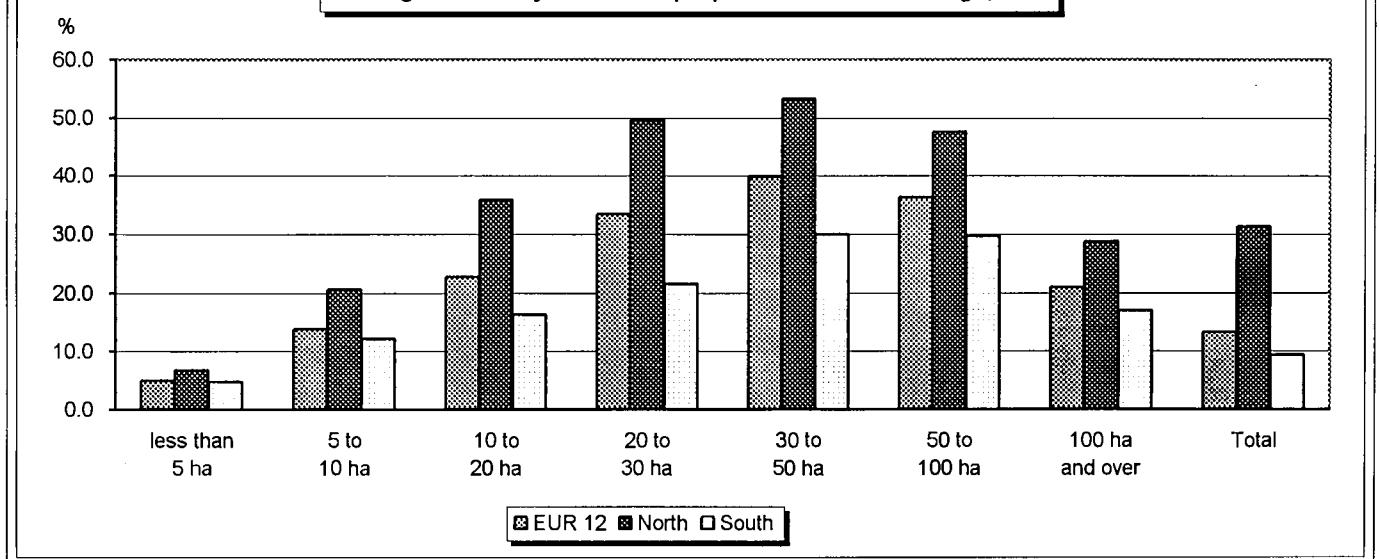

Dairy cows differ in importance in the northern and southern Member States. While one in three holdings in the northern Member States had dairy cows in 1993, the figure was only one in ten in the southern Member States.

The importance of dairy cows also differs widely from one size class to another. In the northern Member States, only 7% of holdings in the size class less than 5 ha UAA had dairy cows in 1993, compared with over 50% in the size class 30 to 50 ha. In the southern Member States, the smallest proportion of holdings with dairy cows was also in the size class less than 5 ha UAA, while almost a third of the holdings in the size class 30 to 50 ha kept dairy cows.

Holdings with dairy cows by size classes of utilized agricultural area (UAA), 1993

Holdings with dairy cows as a proportion of total holdings, 1993

III. Livestock

Dairy cows

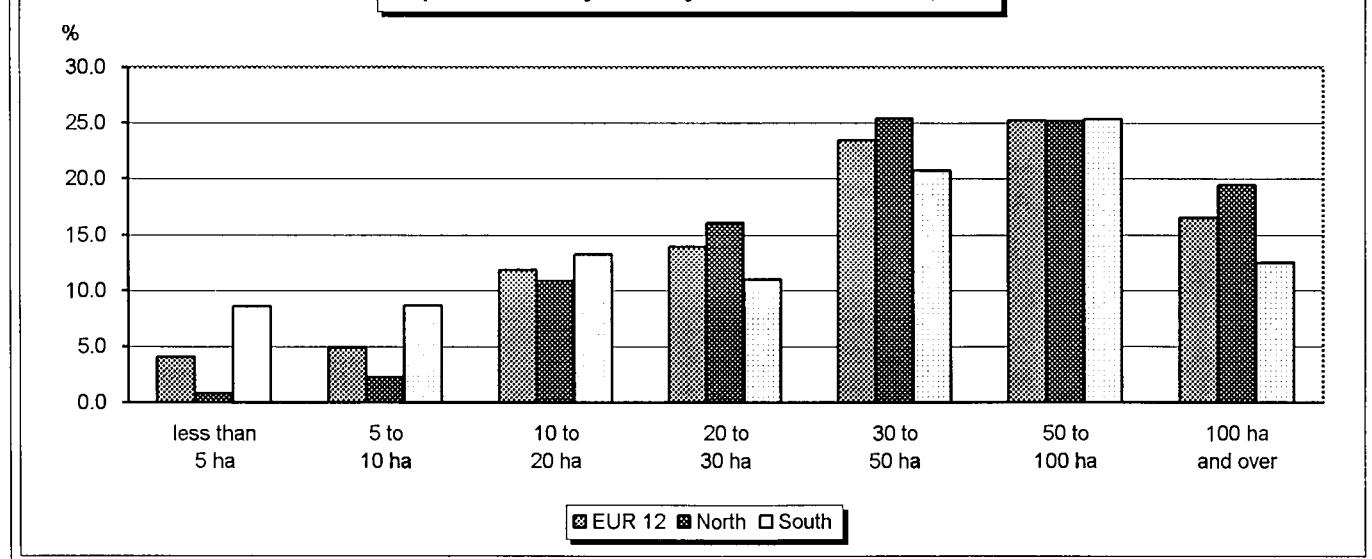

Of the 21.5 mill. dairy cows or so recorded in the European Union of the Twelve in 1993, about two thirds were in the size classes 30 hectare UAA and over, but only about one third of all holdings in these size classes kept dairy cows. In the northern Member States, as much as 70% of the total dairy cow population was on holdings with over 30 ha UAA, compared with 59% in the southern Member States.

It is noteworthy that in the southern Member States about a third of holdings with dairy cows were in the size class less than 5 ha, although this class accounted for only approx. 9% of the total dairy cow population.

Number of dairy cows by size classes of utilized agricultural area (UAA), 1993

Proportion of dairy cows by size classes of UAA, 1993

III. Livestock

Dairy cows

In 1993, holdings with 1 to 2 and 3 to 9 dairy cows accounted for about 40% of the total holdings with dairy cows but only about 7% of the total population of dairy cows. In the northern Member States, the corresponding figures were 23% of holdings and 4% of the total dairy cow population. The size class structure is less favourable in the southern Member States, where over half the total holdings with dairy cows and about 11% of the total dairy cow population were in these two size classes.

It is clear from an examination of holdings with 50 or more dairy cows that in the northern Member States the trend towards larger holdings has progressed further than in the south. Whereas in the northern Member States, almost half of the total dairy cow population is on holdings with 50 or more, this figure was about only 28% in the southern Member States.

III. Livestock

Sheep

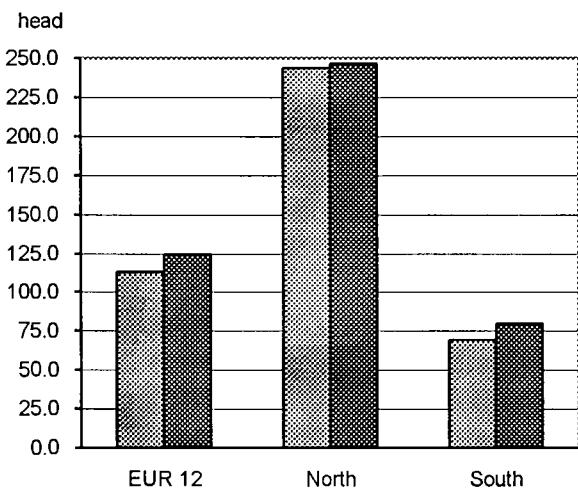

About 106.8 mill. sheep were kept in the European Union of the Twelve in 1993, of which about 56.5 million, or over half of the total were kept, in the northern Member States, where they were concentrated mainly in the United Kingdom, which had about 41% of the total sheep population of the European Union.

It is clear from an examination of the number of sheep per holding that there are marked differences between the northern and southern Member States. Whereas in the northern Member States, there was an average of 247 sheep per holding, this figure was only 80 in the southern Member States. On the other hand, in the southern Member States there were about 581 sheep per 100 ha fodder area, compared with only about 539 in the northern Member States.

Number of sheep per holding

Number of sheep per 100 ha fodder area

III. Livestock

Sheep

A feature of sheep farming in the European Union of the Twelve is the large number of very small holdings with fewer than 9 sheep. In 1993, holdings with fewer than 9 sheep accounted for almost a third of the total holdings, though with only about 1% of the total sheep population.

On the other hand, holdings with over 200 sheep accounted for about three quarters of the total sheep population in the European Union of the Twelve in 1993. In the northern Member States this figure was as high as about 85%, and even 92% in the United Kingdom.

III. Livestock

Pigs

Pig raising is less dependent on farm-produced fodder than cattle or sheep production, and is increasingly conducted using area independent methods and bought-in feedstuffs.

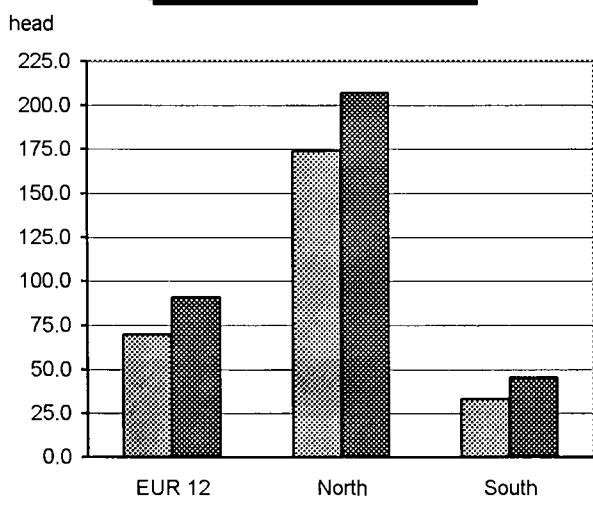

In pig raising there is an unmistakable trend towards regional concentration, judging from the pig population per 100 hectare UAA. In 1993, there were 445 pigs per 100 ha UAA. In the northern Member States the average pig population per 100 ha UAA was 662, compared with only 280 in the southern Member States.

It is clear from an examination of the individual Member States that regional concentration in pig production is most advanced in the Netherlands, where over 4 300 pigs are kept per 100 ha UAA. The corresponding figure in Belgium is about 2 645.

Number of pigs per holding

Number of pigs per 100 ha UAA

III. Livestock

Pigs

In addition to the process of regional concentration, there is also a trend towards "area independent livestock farming". In the European Union of the Twelve, the number of pig producers with over 1 000 animals has steadily increased in recent years. In 1993, the proportion of holdings in the European Union of the Twelve with over 1 000 pigs was about 2%, but these holdings accounted for almost half the pig population.

It is noteworthy that in the southern Member States, the trend towards large holdings is already very advanced, with 4% of holdings having more than 1 000 pigs and accounting for over half the total pig population.

III. Livestock

Broilers

In the last decade poultry production has undergone the most radical changes of all sectors of agriculture in terms of techniques and structures. It is now the most industrialised sector of agriculture.

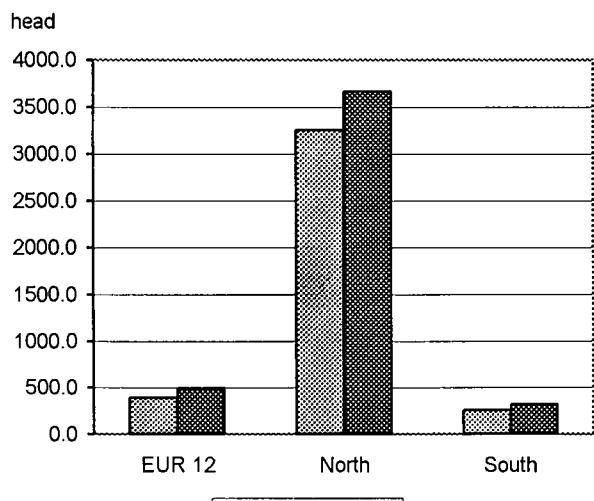

In the European Union of the Twelve, the average number of broilers per holding increased from 390 to 496 over the period 1989/90 to 1993.

However, the average number of poultry varies greatly between the northern and southern Member States, with 3 664 head of poultry per holding in the northern Member States in 1993, compared with only 322 in the southern Member States.

III. Livestock

Broilers

Like pig rearing, poultry breeding is not dependent on farm-grown fodder, but is increasingly area-independent, using bought-in fodder. This is what made the changeover to large-scale holdings possible.

In the European Union of the Twelve, about 97% of holdings with broilers were still in the size class 1 to 99 animals in 1993, but the proportion of the total population for which these accounted was only 2%. In 1993, the proportion of holdings with large numbers of broilers (10 000 and more) was about 1% in the European Union of the Twelve. However, these accounted for about 88% of the total broiler population. In the southern Member States, only about 1% of holdings had over 10 000 broilers, but these accounted for over 80% of the total broiler population. In the northern Member States, the concentration process is further advanced with about 7% of holdings having large numbers of animals (10 000 and over) and accounting for about 97% of the total broiler population.

III. Livestock

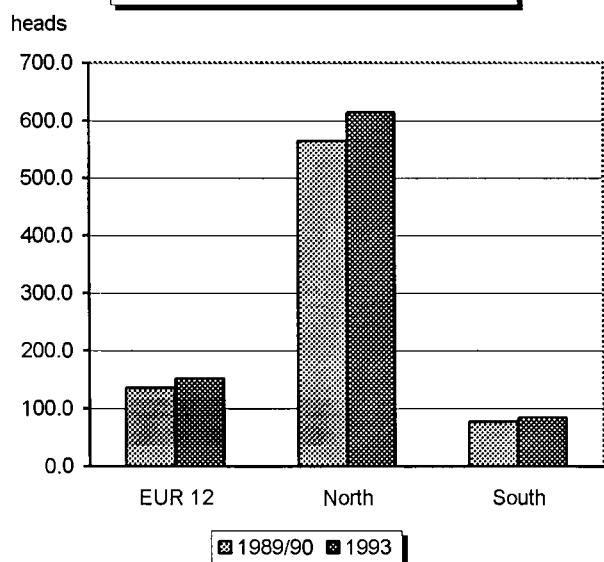

Laying hens

As with broilers, there is an unmistakable trend towards regional concentration in the laying-hens sector, in terms of the number of laying hens per 100 ha UAA. Whereas there were roughly 2 360 laying hens per 100 ha UAA in the northern Member States in 1989/90, the figure had increased to 2 527 by 1993. The trend was similar in the southern Member States, but at a lower level, with an increase in the average number of laying hens per 100 ha UAA from roughly 640 to 673 over the period 1989/90 to 1993.

III. Livestock

Laying hens

In 1993, the smallest size class in terms of numbers (1 to 99) still accounted for about 98% of total holdings with laying hens in the European Union of the Twelve. However, these accounted for only about 9% of the total laying hens. About 57% of all laying hens are concentrated in the size class 30 000 and over, which comprised only about 0.1 % of all holdings with laying hens.

IV. Agricultural labour force

Labour force

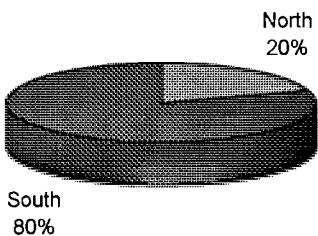

In 1993, about 15.0 mill. persons worked in agriculture in the European Union of the Twelve. This figure was 9% down on the 16.4 mill. or so in 1989/90.

In the southern Member States, almost 12 mill. persons, or about 80% of the total in the European Union of the Twelve, were working in agriculture in 1993. Italy and Spain together accounted for almost half the agricultural labour force.

Breakdown of the agricultural labour force, 1993

Total labour force (AWU) per 100 ha UAA, 1993

IV. Agricultural labour force

Labour force

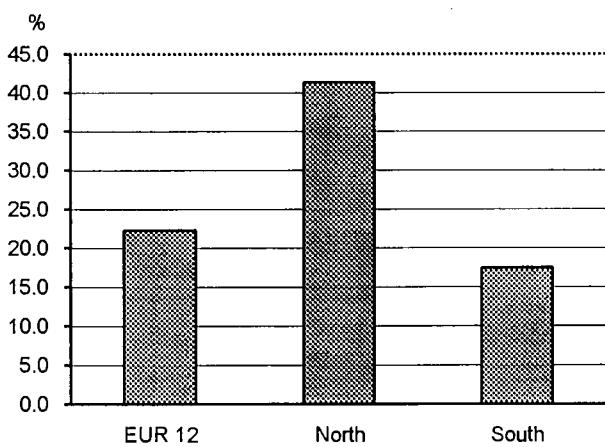

Of the 15.0 mill. or so people working in agriculture in the European Union of the Twelve in 1993, only one-quarter worked full-time, i.e. with agriculture as their main occupation. In the southern Member States, not even a fifth of the people working in agriculture worked full-time. In the northern Member States, on the other hand, about 41% of the agricultural workforce worked full-time.

Family workers play an important role in the European Union of the Twelve, accounting for 94% of the agricultural workforce in 1993. Family workers in the northern Member States accounted for about 83% of the total, while in the southern Member States almost all persons working in agriculture were family workers.

IV. Agricultural labour force

Holders

The decision whether to continue operating or to abandon a holding is generally taken when a holding is passed on to the successor. In the European Union of the Twelve, of the 7.2 mill. or so holders, over half were 55 years and over in 1993, which means that in a few years the question of whether or not to continue operating the holding will arise. In the southern Member States, the proportion of holders aged 55 years and over was about 58%, while the age structure of holders in the northern Member States was more favourable, with only about 41% of holders older than 55.

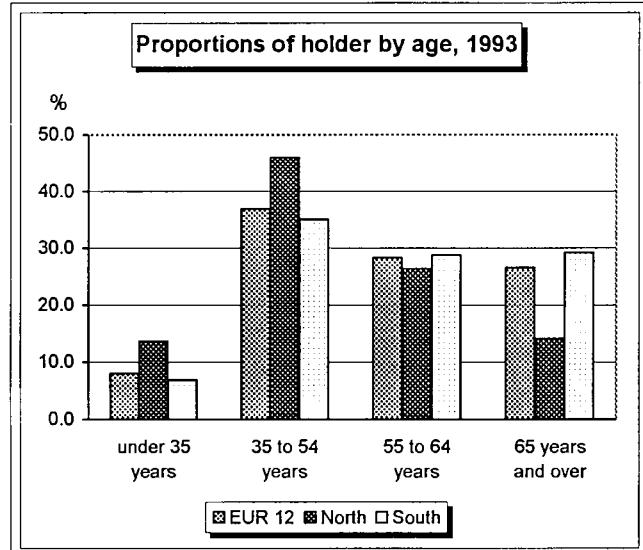

In 1993, only a quarter of holders in the European Union of the Twelve were occupied full-time in agriculture. 50% were occupied full-time in the northern Member States but only one-fifth in the southern Member States.

Holders

In the European Union of the Twelve, the proportion of holders working full-time decreases as age increases. While about 40% of holders under 35 years worked full-time, this figure was only 10% in the case of holders 65 years and over. The situation is different in the northern Member States, where the number of holders working full-time increases with age.

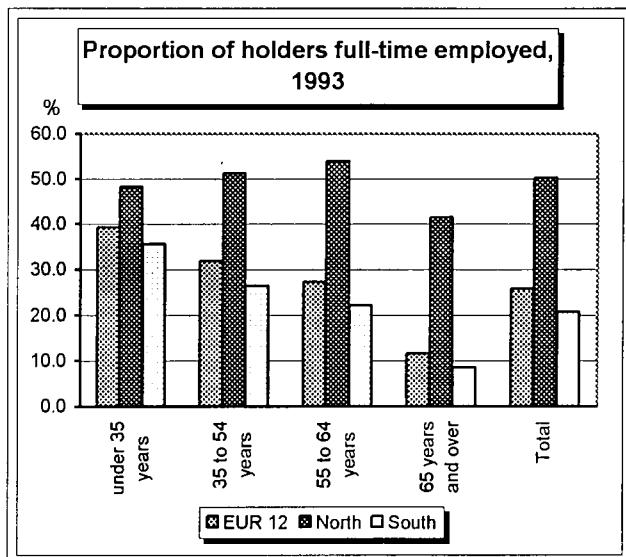

It is noteworthy that there is a much larger proportion of female holders in the southern Member States than in the northern Member States, with one in five and one in ten respectively in 1993.

IV. Agricultural labour force

Gainful activity of holder

On the 6.8 mill. holdings recorded in the European Union of the Twelve in 1993 which had holders who were also the manager of the holding, about 4.9 mill. holders, or about 72%, worked exclusively in agriculture. In the northern Member States this figure was about 64%, compared with three-quarters of holders who had no other gainful activity in the southern Member States.

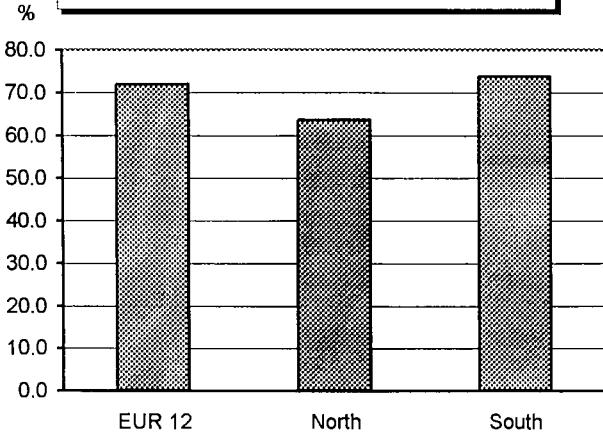

In the European Union of the Twelve in 1993, of the 4.9 mill. or so holders working exclusively in agriculture, only about one-third worked full-time. The corresponding figure in the southern Member States was about 28%, while about three quarters of the holders worked full-time in the northern Member States.

V.Type of farming

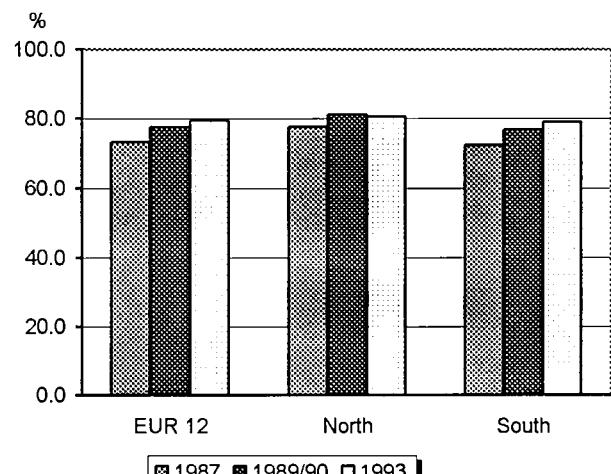

Specialization of holdings

The specialization of holdings in the high-yield production areas in the European Union of the Twelve from 1987 to 1993 can be seen, *inter alia*, from the fact that the proportion of holdings with specialized farming increased in both the northern and southern Member States at the expense of holdings with mixed farming. In the northern Member States, the proportion of holdings with specialized farming increased from about 78% to 81% over the period 1987 to 1993 while there was also an increase, from about 72% to 79% in the southern Member States.

Holdings with specialized farming as a proportion of total holdings

Holdings with field crops as a proportion of total holdings

V. Type of farming

Specialization of holdings

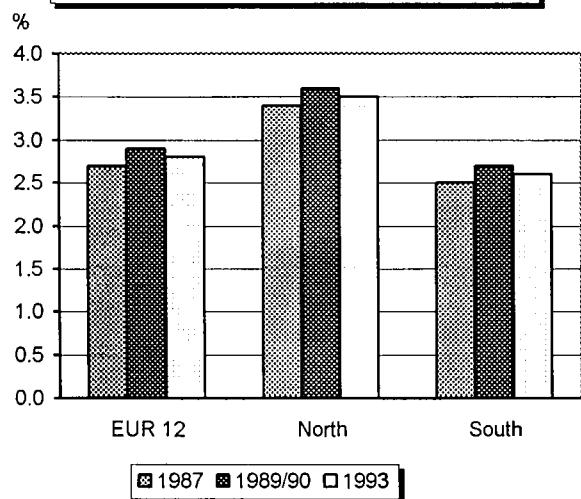

Holdings with permanent crops, which accounted for about a third of the total holdings in 1993, occupy a dominant position in the European Union of the Twelve. About one-fifth of the holdings belong to the field crops group.

In the southern Member States, holdings with permanent crops very much predominate, accounting for about 39% in 1993. The relative importance of holdings with permanent crops is more modest in the northern Member States.

V. Type of farming

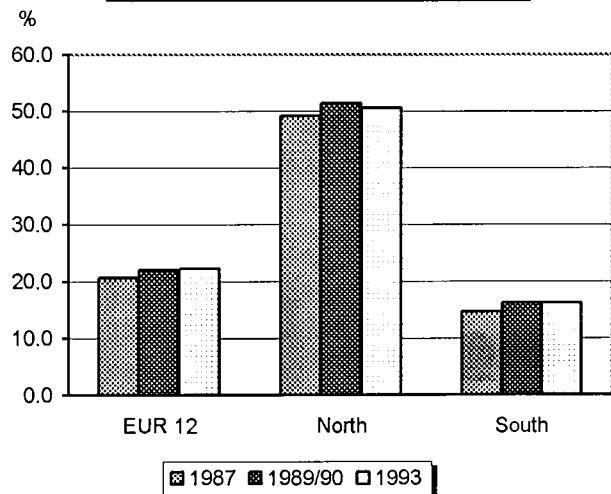

Specialization of holdings

In the European Union of the Twelve, the number of holdings with mixed livestock fell by about 45% over the period 1987 to 1993. The reduction in the northern Member States was only 23% compared with about 50% in the southern Member States.

A similar trend can be identified in holdings with crops/livestock, the number of which fell by about a third over the period 1987 to 1993 in the European Union of the Twelve.

V.Type of farming

Specialist field crops

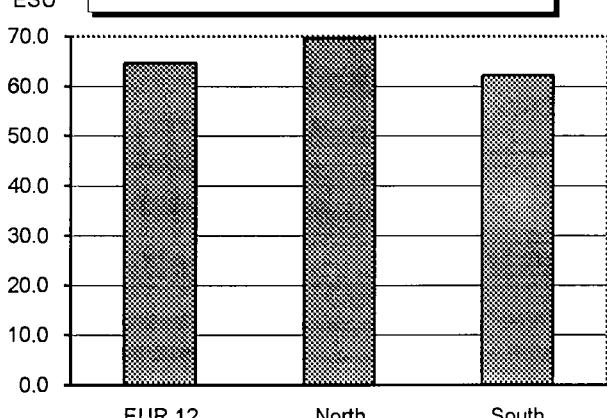

An examination of the average standard gross margin (SGM) per 100 ha UAA or per annual work unit (AWU) reveals major differences between the northern and southern Member States as regards productivity by area and by labour input. The standard gross margin per 100 ha UAA was highest in the northern Member States, particularly in the Netherlands, followed by Belgium. Of the southern Member States, the highest standard gross margins per 100 ha UAA were found in Greece and Italy.

The average standard gross margin per AWU was higher in the northern Member States than in the southern Member States. With their predominantly small holdings, the Mediterranean countries, particularly Greece, Italy and Portugal, have by far the lowest level of labour productivity.

**Standard gross margin per 100 ha UAA,
1993**

Standard gross margin per AWU, 1993

V. Type of farming

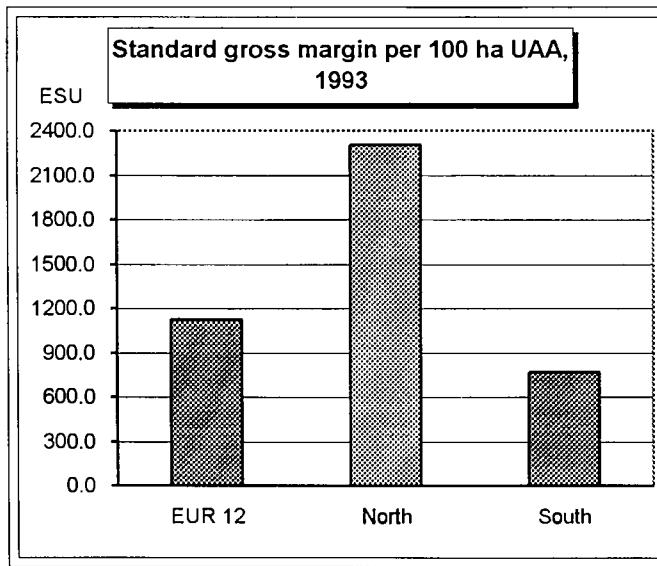

Specialist horticulture

A high level of labour input per 100 hectare UAA is a characteristic feature of horticultural holdings, but there are major differences between northern and southern Member States. Whereas in 1993, the input was 87.2 annual work units (AWU) per 100 hectare UAA in the northern Member States, it was only 39.6 AWU in the southern Member States.

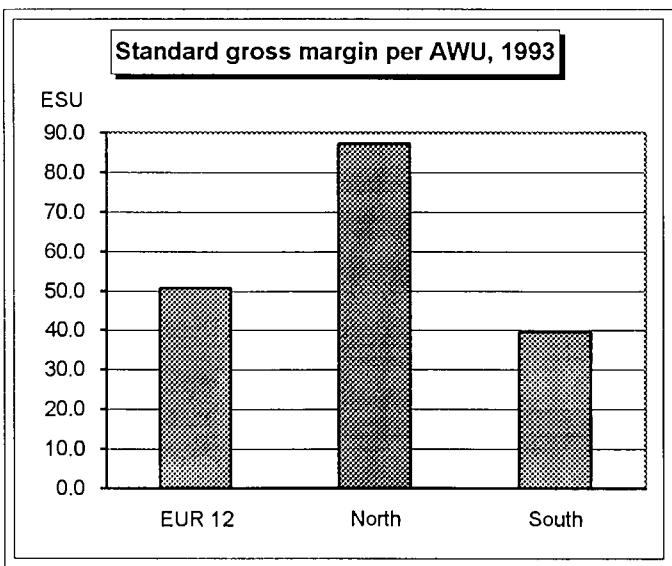

Specialist horticulture, 1993

V. Type of farming

Specialist permanent crops

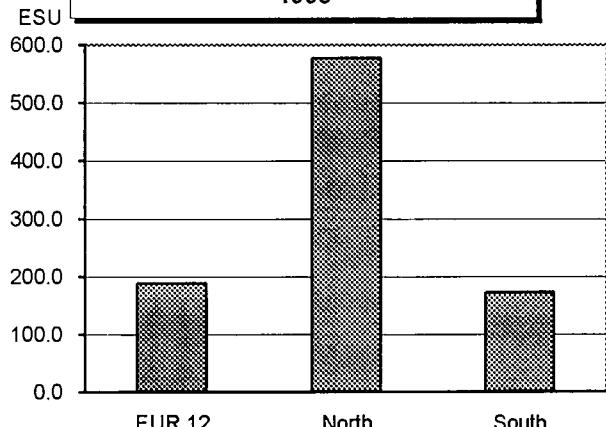

Specialized permanent crop holdings are increasing in importance in the European Union of the Twelve, accounting for some 18% of the total standard gross margin in 1993.

Permanent crop production in the European Union of the Twelve is mainly concentrated in the southern Member States, where about 97% of holdings have permanent crops.

V. Type of farming

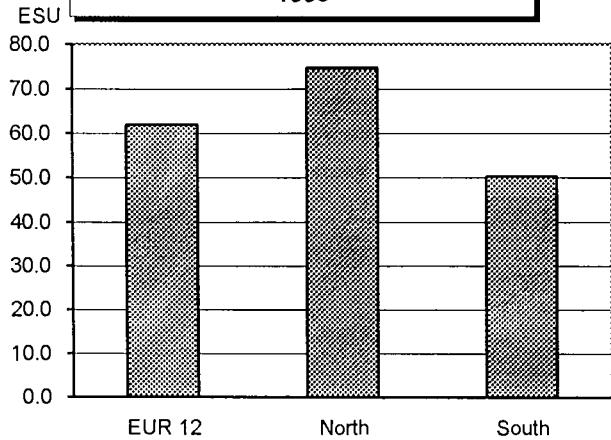

Specialist grazing livestock

Grazing livestock is the most important branch of production in the European Union, accounting for over a quarter of the total standard gross margin (SGM) in 1993. This figure was as high as 38% in the northern Member States, but only 19% in the southern Member States.

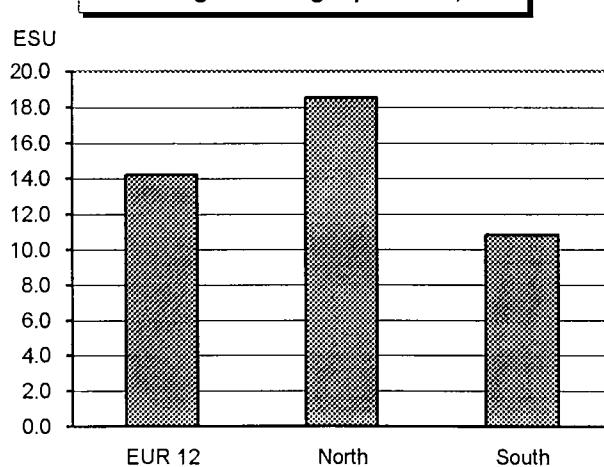

Specialist grazing livestock, 1993

Standard gross margin per AWU, 1993

V. Type of farming

Specialist granivores

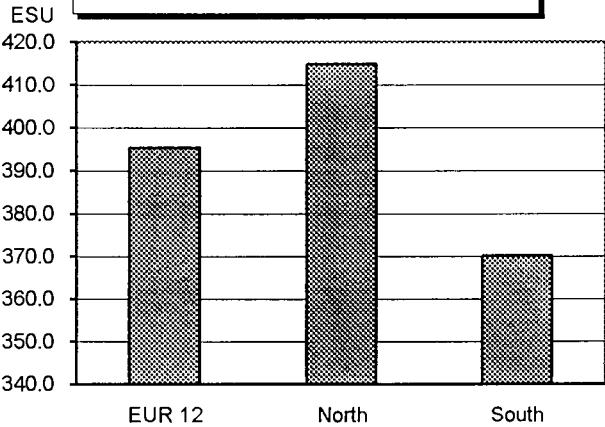

After holdings with horticulture, the highest standard gross margins per AWU are accounted for holdings with granivores, although there are considerable differences between the northern and southern Member States.

In the northern Member States, the standard gross margin per AWU is almost 1.5 times higher than in the southern Member States. An examination of the individual Member States reveals that holdings with granivores in Belgium and Denmark have the highest standard gross margins per AWU, followed by the Netherlands. By far the lowest values are found in the Mediterranean countries, Portugal and Greece.

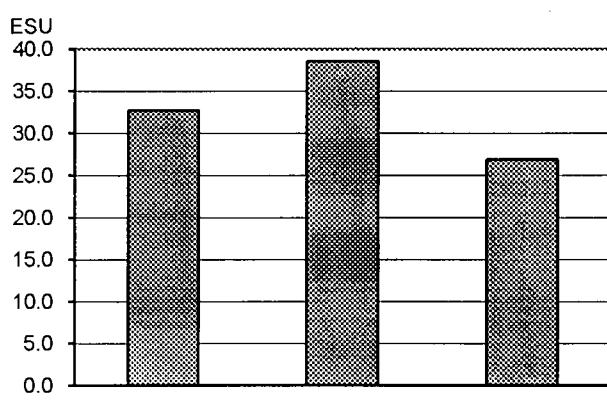

Specialist granivores, 1993

Standard gross margin per AWU, 1993

V.Type of farming

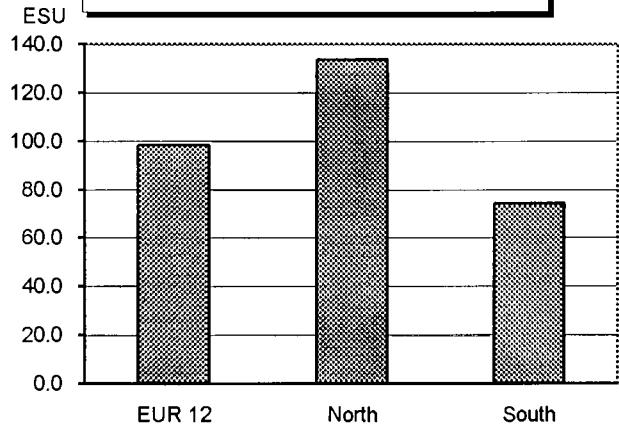

Mixed livestock holdings

There are major structural differences between the northern and southern Member States of the European Union of the Twelve as regards livestock holdings. In 1993, the standard gross margin per holding was 40.2 ESU in the northern Member States, compared with only 10.7 ESU in the southern Member States. The differences become even clearer if one examines the individual Member States. For example, the standard gross margin per holding is 22 times higher in Denmark than in Portugal.

Standard gross margin per 100 ha UAA, 1993

Standard gross margin per AWU, 1993

V. Type of farming

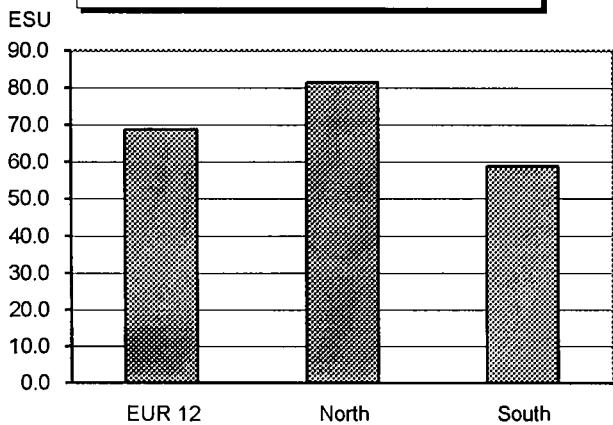

Mixed crops-livestock

The characteristic feature of crop/livestock holdings is that they do not concentrate on any particular type of production and therefore do not form a homogeneous group. This could also explain the major differences in standard gross margin per holding between the northern and southern Member States. In 1993, the standard gross margin per holding in the northern Member States was almost three times as high as in the southern Member States, and in the United Kingdom the SGM per holding was 17 times higher than in Portugal.

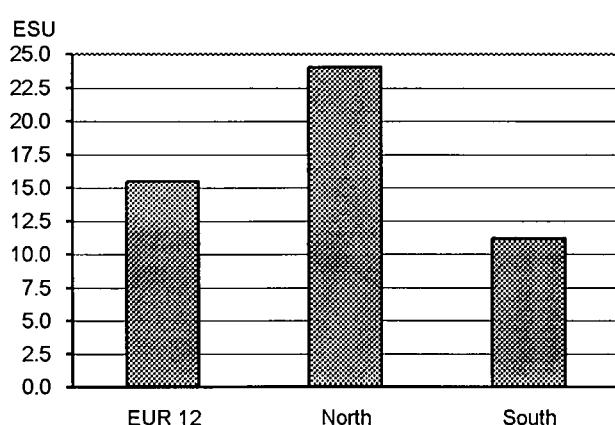

Mixed crops-livestock, 1993

European Commission

Overview of the structure of agricultural holdings — 1993 survey: North-South comparison

Luxembourg: Office for Official Publications of the European Communities

1996 — 60 pp. — 21.0 x 29.7 cm

Theme 5: Agriculture, forestry and fisheries (green)

Series C: Accounts and surveys

ISBN 92-827-8309-X

Price (excluding VAT) in Luxembourg: ECU 15

This volume contains the most important results of the Community survey in 1993 on the structure of holdings. The numerical results of the Community surveys are represented for the first time in a separate publication in the form of a comparison between the northern and southern Member States. The numerical results are supplemented by graphics.

The volume also contains the results of the Community surveys in 1987 and in 1989/90.
