Eurostat on the Internet

Our website is updated daily. Visit it today and get:

- direct and free access to all Eurostat PDF publications;
- direct and free access to our databases;
- alert me — customisable e-mail alerts;
- specialised access to short-term economic data;
- complete information on all Eurostat products and services.

European Statistical Data Support

Eurostat has set up with the members of the 'European statistical system' a network of support centres which will exist in nearly all Member States as well as in some EFTA countries. Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site.

Media Support Eurostat

Journalists can contact the media support service:

Tel. (352) 4301-33408

Fax (352) 4301-35349

E-mail: eurostat-mediasupport@cec.eu.int

Europe Direct is a service to help you find answers to your questions about the European Union

Freephone number (*):

EUROSTAT

L-2920 Luxembourg — Tel. (352) 43 01-1 — www.europa.eu.int/comm/eurostat/

Eurostat is the Statistical Office of the European Communities. Its task is to gather and analyse figures from the different European statistical offices in order to provide comparable and harmonised data for the European Union to use in the definition, implementation and analysis of Community policies. Its statistical products and services are also of great value to Europe's business community, professional organisations, academics, librarians, NGOs, the media and citizens.

To ensure that the vast quantity of accessible data is made widely available and to help each user make proper use of the information, Eurostat has set up a publications and services programme.

This programme makes a clear distinction between general and specialist users and particular collections have been developed for these different groups. The collections *Press releases*, *Statistics in focus*, *Panorama of the European Union*, *Pocketbooks* and *Catalogues* are aimed at general users. They give immediate key information through analyses, tables, graphs and maps.

The collections *Detailed tables* and *Methods and nomenclatures* suit the needs of the specialist who is prepared to spend more time analysing and using very detailed information and tables.

As part of the new dissemination policy, Eurostat has developed its website. All Eurostat publications are downloadable free of charge in PDF format from the website. Furthermore, Eurostat's databases are freely available there, as are tables with the most frequently used and demanded short- and long-term indicators.

Eurostat has set up with the members of the 'European statistical system' a network of support centres which will exist in nearly all Member States as well as in some EFTA countries. Their mission is to provide help and guidance to Internet users of European statistical data. Contact details for this support network can be found on our Internet site.

PRELIMINARY REMARKS

Introduction

Eurostat's fisheries data-base¹⁾ on fishery statistics contains around 1 200 000 time series and 28 million data items covering catches, landings, aquaculture production, the fishing fleets, foreign trade in fishery products, employment and supply balance sheets for fishery products. As far as data availability and resources permit, the contents of the data-base have been maximised in terms of the length of the time series and the country coverage.

This publication is intended to summarise the fisheries data for the period 1990-2004 for:

- EU-15 Member States: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden and the United Kingdom.
- EU-25 Member States: EU-15 plus Cyprus, Czech Rep., Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovak Rep. and Slovenia.
- EEA-28 countries: EU-25 plus Iceland, Liechtenstein and Norway.
- EU Candidate Countries: Bulgaria, Croatia, Romania and Turkey.

Data sources

Eurostat's programme of fishery statistics is highly dependent on collaboration with other international organisations with responsibilities for fishery statistics. This collaboration is co-ordinated through the Co-ordinating Working Party on Fishery Statistics (CWP). Eurostat gratefully acknowledges this contribution to its programme of work without which the quantity and quality of data in the data-base on fishery statistics would be very restricted.

While every effort has been made to provide complete, comparable and harmonised data in all topics covered in the data-base and in this publication, attention is drawn to the following notes which briefly indicate the definitions used in each of the topics covered and where care has to be exercised in the use of the data.

¹⁾ Eurostat's databases are available free of charge through the Eurostat internet site: www.europa.eu.int/comm/eurostat/

Total production

Total production is the sum of the total catches and aquaculture production. See below for the notes on these two components of total production.

Total production is recorded in the live weight equivalent of the production (for aquaculture) or of the landings (for catches).

Aquaculture production

Aquaculture is defined as the farming of aquatic organisms including fish, molluscs, crustaceans and aquatic plants. Farming implies some intervention in the rearing process to enhance production, such as regular stocking, feeding and protection from predators. Farming also implies individual or corporate ownership of, or rights resulting from contractual arrangements to, the stock being cultivated. For statistical purposes, aquatic organisms which are harvested by an individual or corporate body which has owned them throughout their rearing period contribute to aquaculture, while aquatic organisms which are exploited by the public as a common property resource, with or without appropriate licences, are the harvest of fisheries.

The national authorities of EEA countries submit aquaculture production data to Eurostat under the terms of:

Council Regulation (EC) no. 788/96 of 22 April 1996 on the submission by Member States of statistics on aquaculture production (*OJ L108 of 01.05.1996*)

FAO receives aquaculture production data from national authorities on the FISHSTAT AQ questionnaire. This questionnaire uses the same concepts and definitions as the EU legislation and the data from the two sources are comparable. The FAO Fisheries Department performs a check on the quality of the data and makes the results available to Eurostat for inclusion in the NewCronos database.

The data are recorded in the live weight equivalent of the product weight.

Catch

Catch statistics are submitted to Eurostat by EEA member countries in compliance with the following EU legislation:

Council Regulation (EEC) no. 1637/2001 of 23 July 2001 amending Regulation (EEC) no. 3880/91 on the submission of catch statistics by Member States fishing in the Northeast Atlantic. (*OJ L222 of 17.08.2001*)

Council Regulation (EEC) no. 1636/2001 of 23 July 2001 amending Regulation (EEC) no. 2018/93 on the submission of catch and activity statistics by Member States fishing in the Northwest Atlantic. (*OJ L222 of 17.08.2001*)

Council Regulation (EEC) no. 1638/2001 of 24 July 2001 amending Regulation (EEC) no. 2597/95 on the submission of catch statistics by Member States fishing in certain regions other than those of the North Atlantic (*OJ L222 of 17.08.2001*)

All national authorities are requested to submit catch data to FAO and the appropriate regional organisations on a series of STATLANT questionnaires. These questionnaires use the same concepts and definitions as are used in the EU legislation. The regional organisations and FAO make the data for non-EEA countries available to Eurostat.

The national authorities are requested to submit catch statistics for all commercial, subsistence and recreational fisheries. However the reporting of data for recreational fisheries is known to be incomplete.

The data are reported as the live weight equivalent of the landings (i.e. the landed weight of a product to which an appropriate conversion factor has been applied). The data therefore exclude quantities of fishery products which are caught but not landed. For example, fish caught but rejected at sea (a non-commercial species, under-sized fish, etc) or fish consumed on board the vessel are excluded.

The flag of the fishing vessels is used as the primary indication of the nationality of the catch, though this concept may be varied in certain circumstances (for example, in the case of joint ventures and chartering of vessels).

Landings

Each EEA member country reports monthly data on the quantities and values of fishery products landed in its ports under the terms of:

Council Regulation no. 2104/93 of 22 July 1993 amending Regulation (EEC) no. 1382/91 on the submission of data on the landings of fishery products in Member States (*OJ L191 of 31.07.1993*)

The data are the landings (expressed as the product weight) of all fishery products in the reporting country, regardless of the nationality of the vessel making the landings. Landings by vessels of the reporting country in foreign ports are excluded.

Foreign trade

Data for EEA Member States have been extracted from Eurostat's COMEXT foreign trade data-base.

The data on the trade balance are probably under-estimates. Apart from the fact that, in many situations, export data are less completely recorded than import data, two specific situations with regard to fisheries result in the under-reporting of exports:

- trans-shipping of catches at sea to vessels of a different nationality,
- landings by fishing vessels in foreign ports.

Per capita supply

The source of these data is the FAO Fisheries Circular FIDI/C821-Rev.7 (*Fish and Fishery products: World Apparent Consumption based on Food Balance Sheets 1961-2001*). These balance sheets are compiled by FAO's Fisheries Department using the concept:

$$\text{Per capita food supply} = \frac{\text{Production} + \text{Imports} - \text{Exports} - \text{Non-Food Uses} + \text{Change in Stocks}}{\text{Resident population}}$$

The data are expressed in kg live weight / head of population / year.

The items are converted to the live weight equivalent from the landed weight or the product using appropriate conversion factors.

Quantities of fish or other fishery products not used for human consumption (for example, fish used for the production of meal and oils or fish fed directly to animals) are excluded from the balance sheets.

Particular attention is drawn to the fact that the data are not a direct measure of the *per capita consumption*. The data result from the compilation of balance sheets and thus are dependent on the errors associated with each item of the balance sheets. Among the problems in compiling balance sheets for fishery products are obtaining data for the changes in stocks and the selection of appropriate factors for the conversion to the live weight equivalent.

Fishing fleet

The data for EU-15 Member States are tabulated from Eurostat's Statistical Register of Fishing Vessels which is up-dated annually from the administrative file of fishing vessels maintained by the European Commission's Directorate-General for Fisheries. Data for the new Member States are not included because they do not yet submit data to the administrative file of fishing vessels. Data for Iceland and Norway are compiled from fleet files submitted by the national authorities.

During the period covered by these data the method of recording the tonnage of fishing vessels changed from the Gross Register Tonnage (Oslo Convention, 1947) to the Gross Tonnage (London Convention, 1969). These two measures can produce significantly different data. This change has taken place at differing rates in the Member States and thus care has to be exercised both in comparing data between countries and between years (in the latter case due to changes over time in the proportion of vessels being recorded in each of the units).

Employment

The data have been collected by FAO from the national authorities in the FISHSTAT FM questionnaire and have been published in FAO Fisheries Circular FIDI/C929-Rev.2 (*Numbers of Fishers 1970-1997*).

The national authorities are requested to submit data on the number of fishers (male and female) from both marine and inland fisheries and the number of employees in aquaculture production. It is known that there can be significant differences in the national sources of the data and in the definitions used.

Commentary

In 2003 the EU-25 production of fishery products (capture fisheries and aquaculture production) was 5% of the world total. The 10 new Member States only contributed 9% to the total EU-25 production.

Four of the EU-25 Member States (Denmark, France, Spain and the United Kingdom) accounted for 56% of the total production in 2003.

The production in 2003 was about 11% less than the estimated total production in 1990.

Commentary

EU-25 aquaculture production was only 2.5% of the world production in 2003. (N.B. 89% of the total production was by Asian countries.)

The EU-25 production increased by about 35% from 1990-2003. In the same period the production in Norway (largely of Atlantic salmon) increased by 287%.

Four Member States (France, Italy, Spain and the United Kingdom) accounted for 68% of the EU-25 production in 2003.

Years:	1950 onwards
Periodicity:	annual
Species:	individually identified species
Areas:	by major fishing areas
Countries:	individually by all countries reporting catches in the area
Unit:	tonnes live weight
Data source:	Eurostat and FAO

Commentary

In 2003 EU-25 catches accounted for 6.6% of the world total.

The 10 new Member States only accounted for 9.1% of the EU-25 catches in 2003.

Between 1990 and 2003 the EU-25 catch decreased by an estimated 18%. Over the same period the combined catch of Iceland and Norway increased by 46% and the world production by 5%.

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

Sector:	Catches for the Northwest Atlantic (Major Fishing Area 21)
Years:	1950 onwards
Periodicity:	annual
Species:	individually identified species
Areas:	by NAFO divisions and sub-divisions (1960 onwards) and by major fishing area (1950 onwards)
Countries:	individually by all countries reporting catches in the area
Unit:	tonnes live weight
Data source:	Eurostat, NAFO and FAO

Commentary

In 2003 the EU-25 catches in the Northwest Atlantic accounted for 8.5% of the total catches in the area.

Due to the restriction of EU fishing to international waters and the imposition of stringent management measures, the EU-15 catch in the Northwest Atlantic is under 5% of the 1.2 million tonnes caught in 1968.

16% of the EU-15 catches from all areas were taken in the Northwest Atlantic in 1968. In 2003 this had fallen to just 1%.

Commentary

The Northeast Atlantic is the most important fishing region for the EU-25 Member States with 71% of their catches being taken from this region in 2003.

The EU-25 accounted for 40% of the total catch in the region in 2003. Iceland and Norway were the other main fishing nations (43% of the total for the region).

Since 1990 the EU-25 catch in the Northeast Atlantic has fallen by around 14%. On the other hand, the combined catch of Iceland and Norway has risen by 46% in the same period.

Commentary

EU-25 Member States accounted for 17% of the total catches in the Eastern Central Atlantic in 2003.

The EU-15 catches in 2003 showed a 19% decrease to those in 1990. This compares with a drop of 21% in the total catches from the region in the same period.

In 2003 9% of EU-25 catches were taken in the Eastern Central Atlantic.

Commentary

In 2003 the EU-25 accounted for 34% of the total catch from the Mediterranean. 53% of the EU-25 catch was by Italy.

The EU-25 catch decreased by about 19% in the period 1990-2003. In the same period the total catch in the Mediterranean increased by 6%.

Turkey accounted for 31% of the total catch in the Mediterranean in 2003, only a little less than the combined catch of the EU-25 Member States.

Countries: individually by all countries reporting catches in the area
Unit: tonnes live weight
Data source: Eurostat and FAO

Commentary

The EU-25 Member States accounted for only 1.8% of the total catch in the Southwest Atlantic in 2003. Of this, 89% was caught by one Member State, Spain.

Since 1990 the EU-25 catch has decreased by 85%. A major cause of this was the virtual withdrawal of the new Member States (Estonia, Latvia, Lithuania and Poland) from the fisheries of the region.

On the other hand, there was little change in the total catch in the Southwest Atlantic between 1990 and 2003 (+ 0.9%).

Data source:	Eurostat, ICSEAF and FAO

Commentary

EU-25 catches in the Southeast Atlantic in 2003 were 2% of the total catch in the region. Only five Member States (Poland, Portugal, France, Lithuania and Spain) fished in the region in 2003.

This contrasts with the situation in 1990 when EU-25 catches accounted for 11% of the total. Six Member States fished in the region in that year and the EU-25 catch was over 4 times greater than in 2003.

While the EU catch fell sharply in the period 1990 - 2003, the total catch in the region rose by 23% in the same period.

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

Sector:	Catches in inland waters (Major Fishing Areas 01-08)
Years:	1950 onwards
Periodicity:	annual
Species:	individually identified species
Areas:	by continent
Countries:	individually by all reporting countries
Unit:	tonnes live weight
Data source:	Eurostat and FAO

Commentary

In 2003 the EU-25 Member States catches from inland waters only accounted for 1.4% of the world catch from such waters and only 2.1% of the catches from all EU-25 fisheries.

The contribution of the 10 new Member States to the EU-25 total from inland fisheries (32%) was relatively high compared with their contribution to the catches from marine regions (9%).

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

Sector:	Landings
Years:	from January 1992, at the earliest
Periodicity:	monthly
Products:	all landings of fishery products, with details of products covered by EU Market Management regime
Countries:	EEA member countries only
Unit:	tonnes product weight and value (ECU/EUR)
Data source:	Eurostat

Commentary

Data are insufficiently complete to permit an analysis of trends.

The value of the landings in Spain are nearly twice as much as that of the landings in any of the other EU-15 countries.

Norway's landings have a value higher than that of all the EU-15 countries except Spain.

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

Sector:	Foreign trade in fishery products
Years:	from 1976 at the earliest
Periodicity:	annual
Products:	for 10 major groups of fishery products
Flow:	imports, exports and trade balance
Countries:	all reporting countries
Unit:	tonnes product weight and value (ECU/EUR)
Data source:	Eurostat (Comext for EU-25 and EU-Candidate countries) and FAO (for the other countries)

Commentary

The EU-25 Member States have an overall negative balance in trade in fishery products, both in terms of volume and value, and this negative balance has increased in the period since 1990, with the exception of the latest year, 2004.

Only five of the EU-25 Member States (Denmark, Estonia, Ireland, Latvia and the Netherlands) have positive balances in terms of the value.

France, Germany, Italy, Spain and the United Kingdom are the biggest net importers of the EU Member States.

* From 1997 the French data (and hence EU and EEA totals) include vessels of the French Overseas Departments

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

Sector:	Fishing fleet
Years:	from 1990 at the earliest
Periodicity:	annual
Parameters:	by tonnage, length, power and age classes
Countries:	EEA member countries only
Unit:	number, total tonnage (tonnes GRT and/or GT) and total power (kW)
Data source:	Eurostat (Statistical Register up-dated from the DG FISH administrative file.)

Commentary

Of the EU-15 Member States, Greece has the largest number of fishing vessels. However on average these vessels are small (median power of 5 KW) compared with the vessels from most of the other countries (e.g. Spain with a median power of 82 KW).

Since 1990 the EU-15 fishing fleet has decreased by 10% in number, by 7% in total tonnage and 9% in total power.

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

Sector:	Employment
Years:	from 1970 at the earliest
Periodicity:	annual
Coverage:	employment as fishers or in aquaculture.
Detail:	by sector of fishing (eg high seas, coastal), full time/part-time and by sex
Countries:	all countries
Unit:	number
Data source:	Eurostat and FAO

Commentary

Great care has to be taken in analysing these data because there is a lack of harmonisation in the definitions and concepts used in the collection and compilation of the data by the national authorities.

However, in the period since 1990 there has been a general reduction in the number of fishermen in most of the countries cited.

CONTENTS OF EUROSTAT'S DATA-BASE OF FISHERY STATISTICS

Sector: Supply balance sheets
Years: 1961-2001
Periodicity: annual
Products: total fishery products
Countries: all countries
Unit: tonnes or kg live weight
Data source: FAO (latest available data are for 2001)

Commentary

The per capita supply of fishery products in the EU is over 30% greater than that for the world as a whole.

Portugal and Spain have by far the greatest per capita supply of fishery products in the EU-25 Member States.

The per capita supply of the 10 new Member States (10.7 kg/head) is less than half that of the EU-15 Member States (23.7 kg/head).
