Monthly Bulletin

25 March 1982

CONSUMER PRICE INDEX : FEBRUARY 1982

The increase in the consumer price index for the European Community as a whole at 0.6 % between January and February 1982 was the lowest monthly increase for 18 months. The Community average reflects very low increases in some countries; zero for the United Kingdom, 0.2 % in Germany (FR) and in Belgium, 0.5 % in the Netherlands and 0.6 % in Denmark. In Greece the index fell by 0.2 % whereas increases of 1.3 % were recorded for Italy and 1.0 % in France and Luxembourg. The increase in Ireland between November and February was 2.3 %, which corresponds to a monthly average of almost 0.8 %. The rise of the consumer price index over the 12 months to February 1982 was 12.0 % for EUR 10; the corresponding figure for the USA is around 8.5 % and for Japan around 3.5 %.

This monthly bulletin includes a comparison of trends in consumer price indices for food (excluding drinks and meals out) for the individual EC-countries. The relative share of food in the total index in the original base year is as follows :

D	F	I	NL	B	L	UK	IRL	DK	GR
17.6	21.7	29.5	17.6	22.1	40.2	19.6	26.5	19.0	30.8

The share of food products in the national index varies between 18 % ("rich" countries) and 30 % (less rich countries). The index for Luxembourg is not in line because it corresponds to a specific low income group in the population which is different from the average in income and consumption (according to the national accounts, 18 % of consumption was allocated to food).

The level of the food price index, if different from the total index, is lower than the total index for all countries (except Greece where there has been a particularly sharp increase in the food index over the past 2 years). This is true whether as in Germany (FR), the Netherlands and Belgium, the level of the index for food is lower than the average for the Community of Nine or where, as in the United Kingdom, Ireland and Italy, the index for food is higher than the EUR 9 average.

The difference between the highest and lowest food index for individual countries is greater than that for the general indices though the ranking of countries within the range remains nearly the same.

It can be seen from the graph that there are differences in the extent to which countries adjust their national indices for seasonal variations which need to be taken into account in the comparison of trends.

There is no great change in the rates of increase of food price indexes in the countries during recent months, except for Belgium, where - independent of seasonal variations - the rate of increase has become higher since the summer of 1981.

Contents : Table A - General index, p. 3

Table B-K - Indices for sub groups, p. 5-13

Table L - General price indices for Switzerland, Austria, Norway and Sweden, p. 14

Table M - Historical series 1955-1981

Methodological Note

1. The consumer price indices presented here are national indices which may appear under different titles in some of the countries. The development of the general index published by EUROSTAT is equivalent to that published by the country.
2. The components of this general index correspond to groupings of the national indices aggregated according to a harmonized classification of the ESA (European System of Integrated Economic Accounts). The price development of these components is equal to the price development of the national indices for the same components of the classification.
3. The scope of the general index differs according to each country. This can be due to population differences (specific income classes, certain socio-occupational categories, or all households); differences in geographic zones (capital, urban areas, rural areas); or differences in the concepts of expenditure on rent, health, etc. Finally, methods of seasonal correction differ from country to country.
4. A fixed base system is used in some countries, while others use a chain system (variable weights). Base years may also differ between countries. For better comparison EUROSTAT has taken 1975 as the base year for all countries.
5. The EUR 9 indices are obtained from the arithmetic average of the national indices weighted by the relative share of each country in real values, as obtained for final household consumption and its components from the comparison in real values of the aggregates of ESA (1975).

Note méthodologique

1. Les indices de prix à la consommation présentés ici sont les indices nationaux. Ces indices portent des noms différents dans les différents pays. L'indice général publié par l'EUROSTAT correspond toujours, en évolution, à l'indice général publié par le pays.
2. Les composantes de cet indice général correspondent à des regroupements des indices nationaux agrégés selon une classification harmonisée conforme au SEC (Système Européen des Comptes nationaux). Les évolutions de prix correspondent pour ces regroupements aux évolutions constatées par les indices nationaux pour le même champ de classification.
3. Le champ couvert par l'indice général est différent selon les pays, aussi bien concernant la population concernée (tranche de revenu spécifique, certaines catégories socio-professionnelles, ou l'ensemble des ménages) que en ce qui concerne les zones géographiques concernées (capitale, zones urbaines, ensemble des pays, etc...) ou encore concernant les concepts de dépense pour les loyers, la santé, etc.... Enfin, les traitements statistiques concernant les corrections des variations saisonnières sont aussi différents selon les pays.
4. Un système de base fixe est utilisé dans certains pays, dans d'autres un système en chaîne est mis en oeuvre (pondérations variables). Les années de référence utilisées au niveau national pour présenter les indices, sont différentes selon les pays. Pour faciliter la comparaison l'EUROSTAT a choisi l'année 1975 comme année commune pour la présentation de ces indices.
5. Les indices EUR 9 sont obtenus comme moyenne arithmétique des indices nationaux pondérés par les parts relatives des différents pays en valeurs réelles, telles qu'elles ont été obtenues pour la consommation finale des ménages et ses composantes, lors de la comparaison en valeurs réelles des agrégats du SEC-1975.
