

CONSUMER PRICE INDEX

LIBRARY

Monthly Bulletin

21 July 1982

CONSUMER PRICE INDICES: JUNE 1982

The consumer price index for the EC as a whole rose by 0.7% from May to June 1982.

The rates for the individual countries are very different; the increase for Greece was 2.6%, for Luxembourg 1.1% and for Germany (FR) and Italy 1%; the index rose by 0.9% in Belgium, by 0.8% in Denmark and by 0.7% in France. The smallest increases were recorded in the United Kingdom (0.3%) and the Netherlands (0.2%).

For the EC as a whole, the rate of increase over the last twelve months was 11.1%, nearly the same as published in the last two bulletins.

In three countries the inflation over the year was clearly slowing down during the first half of this year: in Italy from 18% to 15%, in the United Kingdom and Denmark from 12% to 9%. For the other countries it is not possible at this moment to indicate clear tendencies, except for a slight rise of the annual figures for Belgium and Luxembourg.

Within the Community a big difference still remains in the rates of increase for the individual countries. Prices in Greece (22.9% over the year) rose nearly four times faster as in Germany (FR) (5.8%).

In several countries there were significant increases between May and June in the prices of potatoes, cigarettes and fuels.

N.B.: Due to an error, the Irish consumer price index for May 1982 in the Monthly Bulletin No. 5 should be 272.3 instead of 273.3.

Contents: Table A - General index, p.3
 Table B-K - Indices for sub-groups, p. 5-13
 Table L - General price indices for Switzerland, Austria, Norway and Sweden, p. 14
 Table M - Historical series 1955-1981
 Methodological note p. 16

Methodological Note

1. The consumer price indices presented here are national indices which may appear under different titles in some of the countries. The development of the general index published by EUROSTAT is equivalent to that published by the country.
2. The components of this general index correspond to groupings of the national indices aggregated according to a harmonized classification of the ESA (European System of Integrated Economic Accounts). The price development of these components is equal to the price development of the national indices for the same components of the classification.
3. The scope of the general index differs according to each country. This can be due to population differences (specific income classes, certain socio-occupational categories, or all households); differences in geographic zones (capital, urban areas, rural areas); or differences in the concepts of expenditure on rent, health, etc. Finally, methods of seasonal correction differ from country to country.
4. A fixed base system is used in some countries, while others use a chain system (variable weights). Base years may also differ between countries. For better comparison EUROSTAT has taken 1975 as the base year for all countries.
5. The EUR 9 indices are obtained from the arithmetic average of the national indices weighted by the relative share of each country in real values, as obtained for final household consumption and its components from the comparison in real values of the aggregates of ESA (1975).

Note méthodologique

1. Les indices de prix à la consommation présentés ici sont les indices nationaux. Ces indices portent des noms différents dans les différents pays. L'indice général publié par l'EUROSTAT correspond toujours, en évolution, à l'indice général publié par le pays.
2. Les composantes de cet indice général correspondent à des regroupements des indices nationaux agrégés selon une classification harmonisée conforme au SEC (Système Européen des Comptes nationaux). Les évolutions de prix correspondent pour ces regroupements aux évolutions constatées par les indices nationaux pour le même champ de classification.
3. Le champ couvert par l'indice général est différent selon les pays, aussi bien concernant la population concernée (tranche de revenu spécifique, certaines catégories socio-professionnelles, ou l'ensemble des ménages) que en ce qui concerne les zones géographiques concernées (capitale, zones urbaines, ensemble des pays, etc...) ou encore concernant les concepts de dépense pour les loyers, la santé, etc.... Enfin, les traitements statistiques concernant les corrections des variations saisonnières sont aussi différents selon les pays.
4. Un système de base fixe est utilisé dans certains pays, dans d'autres un système en chaîne est mis en oeuvre (pondérations variables). Les années de référence utilisées au niveau national pour présenter les indices, sont différentes selon les pays. Pour faciliter la comparaison l'EUROSTAT a choisi l'année 1975 comme année commune pour la présentation de ces indices.
5. Les indices EUR 9 sont obtenus comme moyenne arithmétique des indices nationaux pondérés par les parts relatives des différents pays en valeurs réelles, telles qu'elles ont été obtenues pour la consommation finale des ménages et ses composantes lors de la comparaison en valeurs réelles des agrégats du SEC-1975.
