CONSUMER PRICE INDEX : AUGUST 1982

The increase in the Community consumer price index between July and August 1982 was 0.5 %. As usual in August prices rose only modestly if at all in most of the individual countries. Only in Italy (+ 1.8 %) the increase was significantly more than elsewhere in the Community.

Since the beginning of this year consumer prices have increased by the following percentages. :

	D	F	I	NL	B	L	UK	IRL *	DK	GR EUR 10	USA
Jan./Aug. 82	3.5	6.7	10.2	3.4	5.9	7.1	4.6	10.5	6.1	9.4	6.5
Jan./Aug. 81	4.6	9.7	11.3	4.9	5.0	5.5	8.6	16.5	8.8	9.8	8.5

The above table shows the slowing down in the rates of price increases during the first 8 months of 1982, compared with the rates for the corresponding period of 1981 in most Community countries; the reduction was most marked in the United Kingdom (4.6 against 8.6) and in France (6.7 against 9.7) and the USA (4.0 against 7.0). Only Belgium and Luxembourg recorded price increases which were higher as those for the corresponding period of 1981.

The rate of increase over the year for EUR-10 was 10.7 %, the lowest increase for three years.

This bulletin includes at page 6 a chart showing for each member country the development of price indices for the group 'Rent, fuel and power'. The range between countries in the index numbers for this group is more or less the same as for the global index. However in each individual country the index for this group is at a higher level than the overall index.

Over the last three years the tendency of this sectorial price index to rise above the global index has been accentuated in nearly all countries.

The EUR-10 index in 1979 for this sector stood at 150.1, whereas the global index was at 146.1, a difference of 2.7 %. In July 1982 the sectorial index for the same group stood at 241.1, whereas the global index was at 210.0 a difference of 14.8 %.

Methodological Note

1. The consumer price indices presented here are national indices which may appear under different titles in some of the countries. The development of the general index published by EUROSTAT is equivalent to that published by the country.
2. The components of this general index correspond to groupings of the national indices aggregated according to a harmonized classification of the ESA (European System of Integrated Economic Accounts). The price development of these components is equal to the price development of the national indices for the same components of the classification.
3. The scope of the general index differs according to each country. This can be due to population differences (specific income classes, certain socio-occupational categories, or all households); differences in geographic zones (capital, urban areas, rural areas); or differences in the concepts of expenditure on rent, health, etc. Finally, methods of seasonal correction differ from country to country.
4. A fixed base system is used in some countries, while others use a chain system (variable weights). Base years may also differ between countries. For better comparison EUROSTAT has taken 1975 as the base year for all countries.
5. The EUR 9 indices are obtained from the arithmetic average of the national indices weighted by the relative share of each country in real values, as obtained for final household consumption and its components from the comparison in real values of the aggregates of ESA (1975).

Note méthodologique

1. Les indices de prix à la consommation présentés ici sont les indices nationaux. Ces indices portent des noms différents dans les différents pays. L'indice général publié par l'EUROSTAT correspond toujours, en évolution, à l'indice général publié par le pays.
2. Les composantes de cet indice général correspondent à des regroupements des indices nationaux agrégés selon une classification harmonisée conforme au SEC (Système Européen des Comptes nationaux). Les évolutions de prix correspondent pour ces regroupements aux évolutions constatées par les indices nationaux pour le même champ de classification.
3. Le champ couvert par l'indice général est différent selon les pays, aussi bien concernant la population concernée (tranche de revenu spécifique, certaines catégories socio-professionnelles, ou l'ensemble des ménages) que en ce qui concerne les zones géographiques concernées (capitale, zones urbaines, ensemble des pays, etc...) ou encore concernant les concepts de dépense pour les loyers, la santé, etc.... Enfin, les traitements statistiques concernant les corrections des variations saisonnières sont aussi différents selon les pays.
4. Un système de base fixe est utilisé dans certains pays, dans d'autres un système en chaîne est mis en oeuvre (pondérations variables). Les années de référence utilisées au niveau national pour présenter les indices, sont différentes selon les pays. Pour faciliter la comparaison l'EUROSTAT a choisi l'année 1975 comme année commune pour la présentation de ces indices.
5. Les indices EUR 9 sont obtenus comme moyenne arithmétique des indices nationaux pondérés par les parts relatives des différents pays en valeurs réelles, telles qu'elles ont été obtenues pour la consommation finale des ménages et ses composantes lors de la comparaison en valeurs réelles des agrégats du SEC-1975.
