22 October 1982

Consumer price index : September 1982

The consumer price index for the EC rose by 0.7 from August to September 1982. A substantial increase was reported from Greece, where consumer prices rose by 2.7 %, after having dropped by about 2.0 % from June to August. Significant increases were also recorded in Italy (1.4 %), in Belgium (1.2 %), and in Denmark (1.0 %). Prices rose slower in Germany (FR) 0.3 %, France 0.4 %, the Netherlands (0.6 %) and Luxembourg (0.7 %), whereas the UK retail price index was slightly below the level of the previous month, it now being for the fourth consecutive month practically at the same level. The increase over twelve months for EUR 10 was 10.3 %. Over the last nine months the increase was 7.2 %. For the individual countries the increases were as follows:

	EUR 10	D	F	I	NL	B	L	UK	IRL	DK	GR
Sept. 82/Sept. 81	10.3	4.9	10.1	17.0	5.1	9.4	9.5	7.3	17.0	9.7	20.2
Sept. 82/Dec. 81	7.2	3.8	7.2	11.8	4.0	7.2	7.9	4.6	10.5	7.3	12.3

This bulletin includes on page 6 a chart comparing for each member country, the development of the consumer price index for the "Household goods and services" group. For all countries the index of this group is lower than the general index.

For the Netherlands, Belgium and Luxembourg the levels of these indices are situated nearer to the German index for this group than in the case of the general indices for these same countries.

The slackening of the UK index for this group is significantly more noticeable than the slowing down of the overall index for the UK. Whilst the overall indices for France and Denmark are lower than the overall index for EUR-10, the indices of the "Household goods and services" group for France and Denmark are higher than the corresponding EUR 10 index

At present the EUR 10 index for "Household goods and services" is about 13 % below the level of the overall index.

Methodological Note

1. The consumer price indices presented here are national indices which may appear under different titles in some of the countries. The development of the general index published by EUROSTAT is equivalent to that published by the country.
2. The components of this general index correspond to groupings of the national indices aggregated according to a harmonized classification of the ESA (European System of Integrated Economic Accounts). The price development of these components is equal to the price development of the national indices for the same components of the classification.
3. The scope of the general index differs according to each country. This can be due to population differences (specific income classes, certain socio-occupational categories, or all households); differences in geographic zones (capital, urban areas, rural areas); or differences in the concepts of expenditure on rent, health, etc. Finally, methods of seasonal correction differ from country to country.
4. A fixed base system is used in some countries, while others use a chain system (variable weights). Base years may also differ between countries. For better comparison EUROSTAT has taken 1975 as the base year for all countries.
5. The EUR 9 indices are obtained from the arithmetic average of the national indices weighted by the relative share of each country in real values, as obtained for final household consumption and its components from the comparison in real values of the aggregates of ESA (1975).

Note méthodologique

1. Les indices de prix à la consommation présentés ici sont les indices nationaux. Ces indices portent des noms différents dans les différents pays. L'indice général publié par l'EUROSTAT correspond toujours, en évolution, à l'indice général publié par le pays.
2. Les composantes de cet indice général correspondent à des regroupements des indices nationaux agrégés selon une classification harmonisée conforme au SEC (Système Européen des Comptes nationaux). Les évolutions de prix correspondent pour ces regroupements aux évolutions constatées par les indices nationaux pour le même champ de classification.
3. Le champ couvert par l'indice général est différent selon les pays, aussi bien concernant la population concernée (tranche de revenu spécifique, certaines catégories socio-professionnelles, ou l'ensemble des ménages) que en ce qui concerne les zones géographiques concernées (capitale, zones urbaines, ensemble des pays, etc...) ou encore concernant les concepts de dépense pour les loyers, la santé, etc.... Enfin, les traitements statistiques concernant les corrections des variations saisonnières sont aussi différents selon les pays.
4. Un système de base fixe est utilisé dans certains pays, dans d'autres un système en chaîne est mis en oeuvre (pondérations variables). Les années de référence utilisées au niveau national pour présenter les indices, sont différentes selon les pays. Pour faciliter la comparaison l'EUROSTAT a choisi l'année 1975 comme année commune pour la présentation de ces indices.
5. Les indices EUR 9 sont obtenus comme moyenne arithmétique des indices nationaux pondérés par les parts relatives des différents pays en valeurs réelles, telles qu'elles ont été obtenues pour la consommation finale des ménages et ses composantes, lors de la comparaison en valeurs réelles des agrégats du SEC-1975.
