Monthly Bulletin

22 February 1983

Consumer Prices in January 1983

The Consumer Price Index for the European Community is estimated to have increased by 0.7% from December 1982 to January 1983, (the figures on which this estimate is based are still provisional for some countries). The monthly increases for the Community as a whole have now been less than 1% for the past nine months.

There are however significant increases between December and January in Italy (1.4%) as well as in Belgium and Luxembourg (both 1.2%).

Lower increases were recorded in Greece (0.8%) and Denmark (0.7%) whereas the German Federal Republic (0.2%), the United Kingdom (0.1%) registered only very small increases and in the Netherlands prices remained at the December level.

The rate of increase over the twelve months (January 1983 compared with January 1982) for EUR is now 9.1%, which confirms the slowing down of the rate of increase that started at the beginning of last year.

For the different countries the increases over the twelve months to January 1983 are as follows:

Netherlands	3.8%	Belgium	8.3%	Luxembourg	10.2%
Germany	3.9%	Denmark	9.0%	Italy	16.2%
United Kingdom	4.9%	France	9.5% (E)*	Greece	18.7%

Up-to-date figures are not available for Ireland

Methodological Note

1. The consumer price indices presented here are national indices which may appear under different titles in some of the countries. The development of the general index published by EUROSTAT is equivalent to that published by the country.
2. The components of this general index correspond to groupings of the national indices aggregated according to a harmonized classification of the ESA (European System of Integrated Economic Accounts). The price development of these components is equal to the price development of the national indices for the same components of the classification.
3. The scope of the general index differs according to each country. This can be due to population differences (specific income classes, certain socio-occupational categories, or all households); differences in geographic zones (capital, urban areas, rural areas); or differences in the concepts of expenditure on rent, health, etc. Finally, methods of seasonal correction differ from country to country.
4. A fixed base system is used in some countries, while others use a chain system (variable weights). Base years may also differ between countries. For better comparison EUROSTAT has taken 1975 as the base year for all countries.
5. The EUR 9 indices are obtained from the arithmetic average of the national indices weighted by the relative share of each country in real values, as obtained for final household consumption and its components from the comparison in real values of the aggregates of ESA (1975).

Note méthodologique

1. Les indices de prix à la consommation présentés ici sont les indices nationaux. Ces indices portent des noms différents dans les différents pays. L'indice général publié par l'EUROSTAT correspond toujours, en évolution, à l'indice général publié par le pays.
2. Les composantes de cet indice général correspondent à des regroupements des indices nationaux agrégés selon une classification harmonisée conforme au SEC (Système Européen des Comptes nationaux). Les évolutions de prix correspondent pour ces regroupements aux évolutions constatées par les indices nationaux pour le même champ de classification.
3. Le champ couvert par l'indice général est différent selon les pays, aussi bien concernant la population concernée (tranche de revenu spécifique, certaines catégories socio-professionnelles, ou l'ensemble des ménages) que en ce qui concerne les zones géographiques concernées (capitale, zones urbaines, ensemble des pays, etc...) ou encore concernant les concepts de dépense pour les loyers, la santé, etc.... Enfin, les traitements statistiques concernant les corrections des variations saisonnières sont aussi différents selon les pays.
4. Un système de base fixe est utilisé dans certains pays, dans d'autres un système en chaîne est mis en œuvre (pondérations variables). Les années de référence utilisées au niveau national pour présenter les indices, sont différentes selon les pays. Pour faciliter la comparaison l'EUROSTAT a choisi l'année 1975 comme année commune pour la présentation de ces indices.
5. Les indices EUR 9 sont obtenus comme moyenne arithmétique des indices nationaux pondérés par les parts relatives des différents pays en valeurs réelles, telles qu'elles ont été obtenues pour la consommation finale des ménages et ses composantes, lors de la comparaison en valeurs réelles des agrégats du SEC-1975.
