## Consumer price index in September 1983

The consumer price index for the EC rose by 0.8% from August to September 1983. The biggest rise was reported from Greece (+3.8%) whereas significant rises were recorded in Italy (1.3%), Luxembourg and Denmark (both 1%). Rises were below the Community average in France and Belgium (both 0.7%), the United Kingdom (0.5%), the Netherlands (0.4%) and Germany (0.2%). During the first nine months of 1983 consumer prices in the EC went up by 6.3%, whereas the corresponding figure for last year was 7.2%.

The rates for the individual countries are as follows:

|                | 1983 | 1982 |          | 1983  | 1982  |
|----------------|------|------|----------|-------|-------|
| Germany        | 2.1% | 3.8% | Belgium  | 6.4%  | 7.2%  |
| Netherlands    | 2.3% | 4.1% | France   | 7.5%  | 7.2%  |
| United Kingdom | 4.3% | 4.6% | Italy    | 9.2%  | 12.0% |
| Denmark        | 4.4% | 7.5% | Ireland* | 9.7%  | 8.3%  |
| Luxembourg     | 6.0% | 7.9% | Greece   | 14.4% | 12.3% |

This table shows that inflation in most EC countries is still slowing down. However, figures for some other countries are considerably lower than those for the EC, e.g. USA  $\pm$  2.5%, Canada 3.5%, Japan 1.5%.

Methodological Note

1. The consumer price indices presented here are national indices which may appear under different titles in some of the countries. The development of the general index published by EUROSTAT is equivalent to that published by the country.
2. The components of this general index correspond to groupings of the national indices aggregated according to a harmonized classification of the ESA (European System of Integrated Economic Accounts). The price development of these components is equal to the price development of the national indices for the same components of the classification.
3. The scope of the general index differs according to each country. This can be due to population differences (specific income classes, certain socio-occupational categories, or all households); differences in geographic zones (capital, urban areas, rural areas); or differences in the concepts of expenditure on rent, health, etc. Finally methods of seasonal correction differ from country to country.
4. A fixed base system is used in some countries, while others use a chain system (variable weights). Base years may also differ between countries. For better comparison EUROSTAT has taken 1975 as the base year for all countries.
5. The EUR 10 indices are obtained from the arithmetic average of the national indices weighted by the relative share of each country in real values, as obtained for final household consumption and its components from the comparison in real values of the aggregates for 1975 (1975 has been derived from the new 1980 results).

Note méthodologique

1. Les indices de prix à la consommation présentés ici sont les indices nationaux. Ces indices portent des noms différents dans les différents pays. L'indice général publié par l'EUROSTAT correspond toujours, en évolution, à l'indice général publié par le pays.
2. Les composantes de cet indice général correspondent à des regroupements des indices nationaux agrégés selon une classification harmonisée conforme au SEC (Système Européen des Comptes nationaux). Les évolutions de prix correspondent pour ces regroupements aux évolutions constatées par les indices nationaux pour le même champ de classification.
3. Le champ couvert par l'indice général est différent selon les pays, aussi bien concernant la population concernée (tranche de revenu spécifique, certaines catégories socio-professionnelles, ou l'ensemble des ménages) que en ce qui concerne les zones géographiques concernées (capitale, zones urbaines, ensemble des pays, etc.) ou encore concernant les concepts de dépense pour les loyers, la santé, etc. Enfin les traitements statistiques concernant les corrections des variations saisonnières sont aussi différents selon les pays.
4. Un système de base fixe est utilisé dans certains pays, dans d'autres un système en chaîne est mis en oeuvre (pondérations variables). Les années de référence utilisées au niveau national pour présenter les indices, sont différentes selon les pays. Pour faciliter la comparaison l'EUROSTAT a choisi l'année 1975 comme année commune pour la présentation de ces indices.
5. Les indices EUR 10 sont obtenus comme moyenne arithmétique des indices nationaux pondérés par les parts relatives des différents pays en valeurs réelles, telles qu'elles ont été obtenues pour la consommation finale des ménages et ses composantes, lors de la comparaison en valeurs réelles des agrégats du SEC-1975 (1975 a été dérivé des nouveaux résultats pour 1980).
