Eurostat hat die Aufgabe, den Informationsbedarf der Kommission und aller am Aufbau des Binnenmarktes Beteiligten mit Hilfe des europäischen statistischen Systems zu decken.

Um der Öffentlichkeit die große Menge an verfügbaren Daten zugänglich zu machen und Benutzern die Orientierung zu erleichtern, werden zwei Arten von Publikationen angeboten: Statistische Dokumente und Veröffentlichungen.

Statistische Dokumente sind für den Fachmann konzipiert und enthalten das ausführliche Datenmaterial: Bezugsdaten, bei denen die Konzepte allgemein bekannt, standardisiert und wissenschaftlich fundiert sind. Diese Daten werden in einer sehr tiefen Gliederung dargeboten. Die Statistischen Dokumente wenden sich an Fachleute, die in der Lage sind, selbstständig die benötigten Daten aus der Fülle des dargebotenen Materials auszuwählen. Diese Daten sind in gedruckter Form und/oder auf Diskette, Magnetband, CD-ROM verfügbar. Statistische Dokumente unterscheiden sich auch optisch von anderen Veröffentlichungen durch den mit einer stilisierten Graphik versehenen weißen Einband.

Die zweite Publikationsart, die Veröffentlichungen, wenden sich an eine ganz bestimmte Zielgruppe, wie zum Beispiel an den Bildungsbereich oder an Entscheidungsträger in Politik und Verwaltung. Sie enthalten ausgewählte und auf die Bedürfnisse einer Zielgruppe abgestellte und kommentierte Informationen. Eurostat übernimmt hier also eine Art Beraterrolle.

Für einen breiteren Benutzerkreis gibt Eurostat Jahrbücher und periodische Veröffentlichungen heraus. Diese enthalten statistische Ergebnisse für eine erste Analyse sowie Hinweise auf weiteres Datenmaterial für vertiefende Untersuchungen. Diese Veröffentlichungen werden in gedruckter Form und in Datenbanken angeboten, die in Menütechnik zugänglich sind.

Um Benutzern die Datensuche zu erleichtern, hat Eurostat Themenkreise, d. h. eine Untergliederung nach Sachgebieten, eingeführt. Daneben sind sowohl die Statistischen Dokumente als auch die Veröffentlichungen in bestimmte Reihen, wie zum Beispiel „Jahrbücher“, „Konjunktur“, „Methoden“, untergliedert, um den Zugriff auf die statistischen Informationen zu erleichtern.

Y. Franchet
Generaldirektor

It is Eurostat's responsibility to use the European statistical system to meet the requirements of the Commission and all parties involved in the development of the single market.

To ensure that the vast quantity of accessible data is made widely available, and to help each user make proper use of this information, Eurostat has set up two main categories of document: statistical documents and publications.

The statistical document is aimed at specialists and provides the most complete sets of data: reference data where the methodology is well established, standardized, uniform and scientific. These data are presented in great detail. The statistical document is intended for experts who are capable of using their own means to seek out what they require. The information is provided on paper and/or on diskette, magnetic tape, CD-ROM. The white cover sheet bears a stylized motif which distinguishes the statistical document from other publications.

The publications proper tend to be compiled for a well-defined and targeted public, such as educational circles or political and administrative decision-makers. The information in these documents is selected, sorted and annotated to suit the target public. In this instance, therefore, Eurostat works in an advisory capacity.

Where the readership is wider and less well defined, Eurostat provides the information required for an initial analysis, such as yearbooks and periodicals which contain data permitting more in-depth studies. These publications are available on paper or in Videotext databases.

To help the user focus his research, Eurostat has created 'themes' i.e. a subject classification. The statistical documents and publications are listed by series, e.g. yearbooks, short-term trends or methodology, in order to facilitate access to the statistical data.

Y. Franchet
Director-General

Pour établir, évaluer ou apprécier les différentes politiques communautaires, la Commission des Communautés européennes a besoin d'informations.

Eurostat a pour mission, à travers le système statistique européen, de répondre aux besoins de la Commission et de l'ensemble des personnes impliquées dans le développement du marché unique.

Pour mettre à la disposition de tous l'importante quantité de données accessibles et faire en sorte que chacun puisse s'orienter correctement dans cet ensemble, deux grandes catégories de documents ont été créées: les documents statistiques et les publications.

Le document statistique s'adresse aux spécialistes. Il fournit les données les plus complètes: données de référence où la méthodologie est bien connue, standardisée, normalisée et scientifique. Ces données sont présentées à un niveau très détaillé. Le document statistique est destiné aux experts capables de rechercher, par leurs propres moyens, les données requises. Les informations sont alors disponibles sur papier et/ou sur disquette, bande magnétique, CD-ROM. La couverture blanche ornée d'un graphisme stylisé démarque le document statistique des autres publications.

Les publications proprement dites peuvent, elles, être réalisées pour un public bien déterminé, ciblé, par exemple l'enseignement ou les décideurs politiques ou administratifs. Des informations sélectionnées, triées et commentées en fonction de ce public lui sont apportées. Eurostat joue, dès lors, le rôle de conseiller.

Dans le cas d'un public plus large, moins défini, Eurostat procure des éléments nécessaires à une première analyse, les annuaires et les périodiques, dans lesquels figurent les renseignements adéquats pour approfondir l'étude. Ces publications sont présentées sur papier ou dans des banques de données de type vidéotex.

Pour aider l'utilisateur à s'orienter dans ses recherches, Eurostat a créé les thèmes, c'est-à-dire une classification par sujet. Les documents statistiques et les publications sont répertoriés par série — par exemple, annuaire, conjoncture, méthodologie — afin de faciliter l'accès aux informations statistiques.

Y. Franchet

VORWORT

Gegenstand dieser Veröffentlichung sind die zusammengefassten Energiebilanzen 1991 und 1992, nach Mitgliedstaaten und für die Gemeinschaft insgesamt, ausgedrückt in spezifischen Einheiten und in Tonnen Rohöleinheiten. Die Bilanzen wurden gemäss der "Endenergiemethode" aufgestellt, wonach sämtliche Ströme aufgrund des tatsächlichen Energiegehalts jedes Energieträgers gemessen werden, und zwar ohne Substitutionshypothese und ohne Äquivalenzberechnung.

Den Lesern wird als Veränderung der Bilanzdarstellung eine weitere Verteilung der Umwandlungen sowie die Berücksichtigung der erneuerbaren Energien auffallen. Dadurch kann gegenüber den bisher veröffentlichten Bilanzen ein Bruch entstehen.

FOREWORD

This publication, which is exclusively devoted to the global energy balance sheets, presents, for the years 1991 and 1992, the balance sheets expressed in specific units and in tonnes of oil equivalent, for each of the member State and for the Community as a whole. The balance sheets have been constructed according to the methodology for "supplied energy", where all the operations are harmonized on the basis of the energy content of each source and form of energy, without any hypothetical substitutions, nor any calculation of equivalence.

Readers will notice a change in the presentation of the balances : an additional breakdown of transformations has been added to include taking account of renewable energies. This may lead to breaks in the series relative to the balances as published up to now.

AVANT-PROPOS

Cette publication, consacrée exclusivement aux bilans globaux de l'énergie, présente pour les années 1991 et 1992, les bilans exprimés en unités spécifiques et en tonnes d'équivalent pétrole pour chacun des Etats membres et pour la Communauté dans son ensemble. Les bilans ont été élaborés selon la méthodologie dite de l'"Energie finale", où toutes les opérations sont compatibles sur la base du contenu énergétique de chaque source et forme d'énergie, sans aucune hypothèse de substitution ni aucun calcul d'équivalence.

Les utilisateurs remarqueront le changement de présentation du bilan : en effet, une ventilation supplémentaire des transformations a été introduite et les énergies renouvelables ont été comptabilisées. Ceci peut amener à des ruptures de séries par rapport aux bilans précédemment publiés.

ENERGIEBILANZ 1992 FÜR DIE EUROPÄISCHE UNION

Es wird eine kurze Analyse der Endenergiebilanz, ausgedrückt in Tonnen Rohöleinheiten, sowohl auf Ebene der Gesamtgrößen als auch nach Energieträgern vorgenommen. Ein Abschnitt ist den erneuerbaren Energien gewidmet, die erstmals in der Energiebilanz berücksichtigt werden.

I ANALYSE NACH GESAMTGRÖßEN

1. Erzeugung, Außenhandelssaldo und Umwandlungen

Die Primärenergieerzeugung hat gegenüber 1991 leicht zugenommen (+0,2 %). Die Situation ist jedoch je nach Energieträger sehr unterschiedlich. Bei Steinkohle und vor allem bei Braunkohle ist ein Rückgang zu verzeichnen (-4,9 % bzw. -11,3 %), während für die anderen Energieträger eine Zunahme zu beobachten ist.

Die Nettoeinfuhren sind gegenüber 1991 um 12 Mio. t RÖE oder 2 % auf 630,8 Mio. t RÖE gestiegen.

Der Abhängigkeitsgrad von Energieeinfuhren beträgt somit ca. 50 %.

Was die Umwandlung angeht, so belief sich der Einsatz auf 1 078,8 Mio. t RÖE und die abgeleitete Produktion auf 806,8 Mio. t RÖE.

Hieraus ergibt sich für die Umwandlung ein Bruttowirkungsgrad von 74,8 %.

2. Der Verbrauch

Der Bruttoinlandsverbrauch ist geringfügig gesunken (-0,2 %), während das Bruttoinlandsprodukt allgemein um 1,3 % gestiegen ist.

Der Endenergieverbrauch ist somit folglich ebenfalls um 0,2 % gesunken.

Beim Energieverbrauch der wichtigen Sektoren, ist folgendes festzustellen:

- Der Energieverbrauch der Industrie hat leicht zugenommen (+0,3 %), während der Index der Industrieproduktion um 1,4 % gesunken ist.
- Der Verbrauch im Verkehrssektor ist um 2,6 % gestiegen,
- Der Verbrauch von Haushalten, Handel usw. ist um 3,6 % gesunken. Dies erklärt sich unter anderem aus der milden Witterung im Berichtsjahr, in dem die Gradtagzahl (*) gegenüber 1991 um 7,7 % zurückgegangen ist.

II. ANALYSE NACH ENERGIETRÄGERN

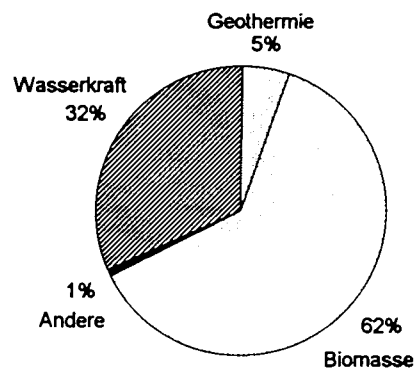

Beim Bruttoinlandsverbrauch, aufgeteilt nach Energieträgern, ist seit Jahren der gleiche Trend zu beobachten: Rückgang bei Kohle, Stagnation bei Erdöl und Anstieg bei Erdgas. Die Anteile der einzelnen Energieträger am Bruttoinlandsverbrauch lauteten für 1992 : Steinkohle 15,6 %, Braunkohle 5,2 %, Erdöl 43,5 %, Erdgas 18,6 %, Kernwärme 13,6 % und erneuerbaren Energien 3,5 %.

III. DIE ERNEUERBAREN ENERGIEN IN DER BILANZ

In der Bilanz werden folgende erneuerbaren Energien berücksichtigt: Sonnenenergie (aktive Solarsysteme), geothermische Energie, Windenergie, Wasserkraftenergie und Biomasse (Holz, Holz- und Ernteabfälle, feste Siedlungsabfälle, Biogas). Die Daten sollten mit einer gewissen Vorsicht interpretiert werden, da Statistiken für diese Energieträger erst seit kurzem erstellt werden und sich ständig weiterentwickeln.

Für 1992 ergaben sich folgende Werte:

- Die Erzeugung erneuerbarer Energien belief sich auf 43,6 Mio t RÖE, das sind 6,7 % der gesamten Primärenergieerzeugung.
- Der Verbrauch erneuerbarer Energien machte 3,5 % des Bruttoinlandsverbrauchs aus.
- Die privaten Haushalte haben 16,2 Mio. t RÖE an Biomasse, insbesondere Holz, verbraucht, das sind ca. 7 % ihres Endenergieverbrauchs.
- Auf die Biomasse entfielen 14 % bzw. 4,3 % des Bruttoinlandsverbrauches an Energie in Portugal und Frankreich.
- Die Wasserkraftenergie (13,8 Mio t RÖE) machte 8,2 % der gesamten Elektrizitätsgewinnung aus.
- Frankreich war mit 5,9 Mio. t RÖE der größte Erzeuger von Wasserkraftenergie.
- Dänemark war der bedeutendste Erzeuger von Windenergie (78 000 t RÖE), die für die Europäische Union indessen nur 0,06% der gesamten Elektrizitätserzeugung ausmachte.

(*) Die Gradtage sind das Maß für die Kälte eines Jahres.

1992 EUROPEAN UNION ENERGY BALANCE SHEETS

The final energy balance sheet, expressed in tonnes of oil equivalent, is briefly analysed as regards both aggregates and products. A paragraph is devoted to renewable energies, included for the first time in the energy balance sheet.

I ANALYSIS BY AGGREGATE

1. Production, trade balance and transformation

Primary production was up slightly by 0.2% compared with 1991, but there were differences depending on the type of energy. Coal and especially lignite fell by 4.9% and 11.3% respectively, while other energy products increased.

Net imports rose by 12 million toe compared with 1991, to reach 630.8 million toe, an increase of 2%.

External energy dependence was thus approximately 50%.

As regards the activity of the transformation sector, input amounted to 1 078 800 toe and the production of derived energy to 806.8 million toe.

Gross transformation efficiency was therefore 74.8%.

2. Consumption

Gross inland consumption fell very slightly (-0.2%), while overall Gross Domestic Product rose by 1.3%.

It follows that final energy consumption also fell by 0.2%.

An analysis of the consumption of each major sector shows that:

- the consumption of industry rose slightly (+0.3%), while the industrial production index fell by 1.4%;
- consumption by transportation rose by 2.6%;
- consumption by households, trade etc. fell by 3.6%, one of the reasons for which was the mild weather during the year; since the number of degree-days (*) was 7.7% down on 1991.

II. ANALYSIS BY PRODUCT

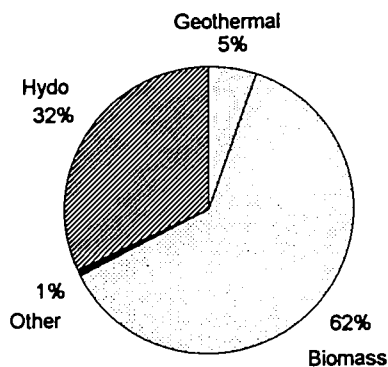

Gross inland consumption by energy source followed the same trend as in recent years: coal down, oil stable and natural gas up. The percentage of the total consumption for each source in 1992 was 15.6% for hard coal, 5.2% for lignite, 43.5% for oil, 18.6% for natural gas, 13.6% for thermal energy produced in nuclear power stations and 3.5% for renewable energies.

III. RENEWABLE ENERGIES IN THE BALANCE SHEET

The renewable energies (RE) included in the balance sheet are: solar energy (active), geothermal energy, wind energy, hydropower and biomass (wood, wood waste, municipal solid waste and biogas). The reader should treat the data with some caution since statistics on these types of energy are recent and constantly progressing.

1992 saw the following developments :

- RE production was 43.6 million toe, i.e. 6.7% of total primary production.
- consumption of RE was 3.5% of gross inland consumption.
- households consumed 16.2 million toe of biomass, particularly wood, which represents approximately 7% of their final consumption.
- biomass represented 14% and 4.3% of gross inland consumption of energy in Portugal and France respectively.
- hydropower (13.8 million toe) represented 8.2% of total electricity production.
- France was the main producer of hydroelectric power (5.9 million toe).
- Denmark was the main producer of wind energy (78 000 toe), but this represents only 0.06% of total electricity production in the European Union.

(*) Degree-days express the level of cold during the year.

BILAN DE L'ÉNERGIE 1992 DE L'UNION EUROPÉENNE

Le bilan de l'énergie finale, exprimé en tonne équivalent pétrole, est analysé succinctement tant au niveau des agrégats que des produits. Un paragraphe est réservé aux énergies renouvelables, intégrées pour la première fois dans le bilan de l'énergie.

I. ANALYSE PAR AGREGAT

1. La production, le solde des échanges et les transformations

La production primaire est en légère hausse de 0,2 % par rapport à 1991 mais la situation est contrastée suivant le type d'énergie. En effet, la houille et surtout le lignite reculent respectivement de 4,9 % et de 11,3 % tandis que les autres produits énergétiques progressent.

Les importations nettes, en comparaison avec 1991, s'élèvent à 630,8 mio tep en augmentation de 12 millions de tep soit 2 %.

Le taux de dépendance énergétique a ainsi atteint environ 50 %.

En ce qui concerne, l'activité du secteur transformation, les entrées ont été de 1.078,8 mio de tep et la production d'énergie dérivée de 806,8 mio de tep.

Ceci implique un rendement brut de transformation de 74,8 %.

2. La consommation

La consommation intérieure brute est en très léger recul (- 0,2 %), alors que le Produit intérieur brut général est en hausse de 1,3 %.

La consommation finale énergétique est logiquement également en diminution de 0,2 %.

Si on analyse alors la consommation de chaque grand secteur, on constate que :

- la consommation de l'industrie s'accroît légèrement (+0,3 %) alors que l'indice de la production industrielle est en recul de 1,4 %,
- la consommation du transport est en hausse de 2,6 %,
- la consommation des foyers domestiques, commerce, etc... est en recul de 3,6%, ce qui s'explique, entre autres, par le climat doux de l'année puisque le nombre de degrés-jours (*) est en recul de 7,7 % par rapport à 1991.

II. ANALYSE PAR PRODUIT

Au niveau de la consommation intérieure brute, l'évolution par source d'énergie suit depuis des années la même tendance, à savoir : diminution du charbon, stagnation du pétrole et augmentation du gaz naturel. Les parts pour l'année 1992 ont été de 15,6 % pour la houille, 5,2 % pour le lignite, 43,5 % pour le pétrole, 18,6 % pour le gaz naturel, 13,6 % pour la chaleur nucléaire et 3,5 % pour les énergies renouvelables.

III. LES ENERGIES RENOUVELABLES DANS LE BILAN

Les énergies renouvelables (E.R.) reprises dans le bilan sont : l'énergie solaire (actif), l'énergie géothermique, l'énergie éolienne, l'énergie hydraulique et la biomasse (le bois, les déchets de bois et de récolte, les ordures ménagères, les biogaz). Le lecteur doit considérer les données avec une certaine prudence car la statistique de ces énergies est récente est en progrès constant.

Pour 1992, on observe les faits suivants :

- la production d'E.R. a été de 43,6 mio tep soit 6,7 % du total de la production primaire.
- la consommation d'E.R. représente 3,5 % de la consommation intérieure brute.
- les foyers domestiques ont consommé 16,2 mio de tep de biomasse, surtout du bois, ce qui représente environ 7 % de leur consommation finale.
- la biomasse représente 14 % et 4,3 % dans la consommation intérieure brute d'énergie respectivement du Portugal et de la France.
- l'énergie hydraulique (13,8 mio tep) représente 8,2 % de la production totale d'électricité.
- la France est le plus grand producteur d'électricité hydraulique avec un équivalent de 5,9 mio de tep.
- Le Danemark est le plus important producteur d'énergie éolienne (78.000 tep) mais pour l'Union Européenne, celle-ci ne représente que 0,06 % de la production totale d'électricité.

(*) Les degrés-jours sont l'expression de l'importance du froid au cours de l'année.

(*) The tonne of oil equivalent is a conventional standardized unit defined on the basis of a tonne of oil with a net calorific value of 41868 kilojoules/kg.

The conversion coefficients from the specific units to the kgoe (kilogramme of oil equivalent) are thus computed by dividing the conversion coefficients to the kilojoules by 41868.

(*) La tonne d'équivalent pétrole est une unité conventionnelle standardisée définie sur la base d'une tonne de pétrole ayant un pouvoir calorifique inférieur de 41868 kilojoules/kg.

Les coefficients de conversion des unités spécifiques vers le kgep (kilogramme d'équivalent pétrole) sont de ce fait calculés en divisant les coefficients de conversion vers les kilojoules par 41868.

Diese mittels EDV erstellte Veröffentlichung enthält zusammengefaßte Energiebilanzen der Europäischen Union, ausgedrückt in spezifischen Einheiten und in Tonnen Rohöleinheit. Die Bilanzaufstellung fußt auf der „Endenergiemethode“, wonach sämtliche Ströme aufgrund des Energiegehaltes jedes Energieträgers gemessen werden, ohne Substitutionshypothese und ohne Äquivalenzberechnung.

Die Darstellung der Daten in Form von aggregierten Bilanzen und Erzeugnisbilanzen bezieht sich auf die Jahre 1991 und 1992.

This computer-produced publication contains the overall energy balance sheets for the European Union, expressed in specific units and in tonnes of oil equivalent and based on the 'energy supplied' methodology, in which all operations are evaluated by the energy content of each source and form of energy without the need for substitution or equivalence calculations.

The data refer to 1991 and 1992 and are given in aggregated form and by product.

Cette publication, établie par voie informatique, est consacrée aux bilans globaux de l'énergie de l'Union européenne. Les bilans exprimés en unités spécifiques et en tonnes d'équivalent pétrole sont élaborés selon la méthodologie dite de l'«énergie finale», où toutes les opérations sont comptabilisées sur la base du contenu énergétique de chaque source et forme d'énergie, sans aucune hypothèse de substitution ni aucun calcul d'équivalence.

La présentation sous forme de bilans agrégés et de bilans ventilés par produit concerne les années 1991 et 1992.
