Mit der monatlich erscheinenden Veröffentlichung „Eurostatistik“ – Daten zur Konjunkturanalyse werden innerhalb kürzester Frist die neuesten statistischen Daten über die Europäische Gemeinschaft als Ganzes (EUR 12), über jedes Mitgliedsland sowie über die Vereinigten Staaten und Japan bekanntgegeben.

„Eurostatistik“ enthält nicht die Gesamtheit des bei Eurostat verfügbaren statistischen Materials, sondern eine Auswahl der relevantesten Reihen über die konjunkturelle Entwicklung.

Die Reihen werden jeweils für die letzten 15 Monate, die letzten fünf Quartale und die letzten vier Jahre veröffentlicht, um eine kurz- oder mittelfristige Analyse – gegebenenfalls mit überarbeiteten Zahlen – zu ermöglichen.

Schnelligkeit und Pünktlichkeit sind die wichtigsten Vorzüge dieser Veröffentlichung. Aus diesem Grunde wurde sie im Umfang bewußt klein gehalten und enthält keine Anmerkungen zur Methodik, die im übrigen in den spezialisierten Veröffentlichungen von Eurostat zu finden sind.

„Eurostatistik“ besteht aus drei Teilen:

- Die Rubrik „kurz notiert“ gibt die wichtigsten Ereignisse und Entwicklungen der jüngsten Zeit im wirtschaftlichen, finanziellen und sozialen Bereich wieder.
- Im Schaubilderteil werden die wichtigsten Reihen über die wirtschaftliche Entwicklung in der Gemeinschaft, den Mitgliedstaaten, den Vereinigten Staaten und Japan veranschaulicht.
- Im Konjunkturdatenteil werden die Daten, die von Eurostat auf der Grundlage gemeinsamer Kriterien harmonisiert wurden, für sämtliche Mitgliedstaaten dargestellt und mit den Daten der Vereinigten Staaten und Japans verglichen.

Die in „Eurostatistik“ veröffentlichten Daten stammen aus dem „ICG“-Bereich der On-line-Datenbank „Cronos“ von Eurostat.

Wer Zugang zu Cronos besitzt, kann jederzeit die Tabellen dieser Veröffentlichung abfragen, wobei die Daten täglich auf den neuesten Stand gebracht werden. Hinweise zur „on-line“-Benutzung finden sich auf der letzten Seite.

Soweit nicht anders angegeben, beziehen sich die Angaben auf den Gebietsstand der Bundesrepublik Deutschland vor dem 3.10.1990; sie schließen Berlin (West) ein.

**WECHSELKURSE: Dollar verliert gegenüber den meisten wichtigen Währungen an Wert**

Im April verlor der US-Dollar gegenüber den Währungen der meisten wichtigen Handelspartner der USA an Wert. Von den in dieser Veröffentlichung erfaßten Währungen bildeten dabei lediglich der Yen und die Drachme eine Ausnahme, wobei insbesondere der Yen in letzter Zeit unter Druck geriet.

Der Dollarkurs ging im April gegenüber den hier erfaßten Währungen um durchschnittlich 0,9 % zurück, war damit im Durchschnitt jedoch noch immer um fast 5 % höher als am Jahresanfang. Der Wertverlust der amerikanischen Währung setzte sich jedoch in den ersten Maiwochen fort, wozu auch Befürchtungen beitrugen, daß die Zinssätze in den USA erneut gesenkt werden könnten; als die amerikanischen Notenbank ihres Tagesgeldsatz in der dritten Maiwoche dann allerdings nicht zurücknahm, konnte sich der Dollar leicht erholen.

Anfang Mai kam es im Vereinigten Königreich und in Frankreich zu Zinssenkungen, die als Test für die zentrale Stellung der D-Mark innerhalb des Wechselkursmechanismus des EWS angesehen wurden. Am 5. Mai sprach sich die Bank of England für eine 0,5%ige Senkung der Basisausleihesätze der britischen Banken aus, die jetzt mit 10 % ihr niedrigstes Niveau seit rund vier Jahren erreicht haben. Zwei Tage später bewirkte die Banque de France einen Rückgang der französischen Basisausleihesätze, indem sie den für die Banken geltenden Reserversatz von 4 % auf 1 % reduzierte; auf diese Weise konnte eine Änderung des amtlichen Interventionsatzes vermieden werden. In beiden Fällen hatte der Zinsrückgang keine nennenswerten Auswirkungen auf die jeweilige Position der Währungen gegenüber den anderen am Wechselkursmechanismus teilnehmenden Währungen; sowohl beim Pfund Sterling als auch beim französischen Franc war ein Anstieg des Wechselkurses gegenüber der D-Mark zu beobachten, wobei der Franc in der Woche vom 11. Mai seinen D-Mark-Leitkurs erreichte.

Nachdem der Escudo am 6. April in den Wechselkursmechanismus einbezogen wurde, kam es erwartungsgemäß zu einem Anstieg des Ecu-Kurses der portugiesischen Währung, der am Monatsende um 2 % über seinem Wert vom Monatsanfang lag. Damit hat der Escudo jetzt (am 21. Mai) vor der Peseta unter den am Wechselkurs teilnehmenden Währungen die stärkste Position inne.

**RENDITEN VON STAATSANLEIHEN: Deutschland ist weiterhin das EG-Land mit den niedrigsten Anleiherenditen**

Trotz eines leichten Anstiegs im April sind die Renditen von deutschen Staatsanleihen mit 8,2 % nominal weiterhin die niedrigsten in der EG. Die deutschen Anleiherenditen sind damit seit Beginn 1991, als sie noch bei über 9 % lagen, im wesentlichen rückläufig, während die kurzfristigen Zinssätze in Deutschland nach wie vor unvermindert hoch sind. Die verglichen mit den übrigen EG-Ländern relativ niedrigen Renditen von deutschen Staatsanleihen sind möglicherweise darauf zurückzuführen, daß man an den Finanzmärkten mit einem Rückgang der Inflationsrate in Deutschland rechnet.

Im März betrug die durchschnittliche Rendite von Staatsanleihen in der EG <sup>1)</sup> 9,5 % gegenüber 9,7 % im Dezember 1991. In den Ländern, für die die enge Bandbreite des Wechselkursmechanismus gilt, war das Renditeniveau im März mit 9,2 % (gegenüber 9,4 % im Dezember) etwas niedriger.

Die realen Renditen von Staatsanleihen sind nachstehender Tabelle zu entnehmen:

**Reale langfristige Zinssätze (Monatsdurchschnitte)**

	9/91	12/91	3/92
Belgien	6,7	6,2	6,1
Dänemark	7,3	6,5	6,1
Deutschland	4,8	4,3	3,3
Spanien	5,8	6,3	4,4
Frankreich	6,7	6,1	5,9
Italien	5,2	4,8	6,2
Luxemburg	4,9	5,5	4,7
Niederlande	4,3	3,9	4,1
Portugal	4,4	4,7	4,0
Vereinigtes Königreich	5,4	5,1	5,5
USA	4,6	4,5	4,7
Japan	3,4	2,8	3,4

Die realen Renditen von Staatsanleihen waren in den letzten sechs Monaten in vielen EG-Ländern rückläufig; im Vereinigten Königreich, den Niederlanden, den USA und Japan blieben sie dagegen im wesentlichen unverändert. Der stärkste Rückgang der realen Renditen war in Deutschland zu beobachten, wo die Inflationsrate über dem nominalen Renditerückgang lag.

Italien ist das einzige EG-Land, in dem die realen Renditen in den letzten sechs Monaten gestiegen sind, da die Inflationsrate rückläufig war, während das nominale Renditeniveau im März gegenüber September 1991 unverändert blieb. Hohe reale Zinssätze scheinen für einige am Wechselkursmechanismus teilnehmende Länder charakteristisch zu sein, da zur Aufrechterhaltung einer bestimmten Währungsparität auch bei geringer Inflation hohe nominale Renditen erforderlich sind. Dieser Zusammenhang wird in Belgien, Dänemark und jetzt auch im Vereinigten Königreich deutlich, wo sich die Inflation in den letzten 15 Monaten drastisch verlangsamt hat, während die nominalen Anleiherenditen nur geringfügig zurückgingen.

**GELDVOLUMEN: Monatliche Daten jetzt auch für Belgien**

Anstelle der früher verwendeten vierteljährlichen Daten sind für Belgien jetzt monatliche Angaben zu M1 und M2 verfügbar. Die in dieser Veröffentlichung wiedergegebenen Daten basieren allerdings auf leicht geänderten Konzepten; die auf das Jahr umgerechnete M2-Zuwachsrate liegt in Belgien derzeit bei knapp über 4 %.

Auch in Italien wurden gewisse konzeptuelle Änderungen vorgenommen; M2 schließt jetzt Bankschecks der Banca d'Italia und anderer Kreditinstitute, nicht jedoch Wertpapierpen-

sionsgeschäfte und Postsparkbriefe ein. Ferner handelt es sich bei den angegebenen Daten jetzt um Monatsdurchschnittswerte und nicht um Werte zum Monatsende. Aus diesen Änderungen ergibt sich eine geringere Ausweitung des Geldvolumens; so betrug die M2-Zuwachsrate in Italien im Februar 1992 7,4 % und näherte sich damit den von der Banca d'Italia angestrebten 5 % - 7 %.

In Japan und im Vereinigten Staaten ist das Geldmengenwachstum weiterhin sehr gering; M2 weitete sich in Japan 1991 um 2 % aus (1990 um 8,5 %) und in den USA in den zwölf Monaten bis Januar 1992 um 3,5 %, was in etwa seiner Zuwachsrate in den vorangegangenen zwölf Monaten entsprach.

In Griechenland hat sich das M3-Wachstum beschleunigt; nachdem die auf ein Jahr umgerechnete M3-Zuwachsrate mehrere Monate unter 10 % gelegen hatte, betrug sie im ersten Quartal 1992 10 % - 11 %. Damit liegt sie jedoch nach wie vor innerhalb des von der Bank von Griechenland anvisierten Zielkorridors von 9 % - 12 %.

**VIERTELJÄHRLICHE GESAMTRECHNUNGEN: Viertes Quartal 1991: Stagnation der wirtschaftlichen Entwicklung der Gemeinschaft (BIP 0,0 %) bei unveränderter Inflationsrate (+1,2 %)**

Die Wirtschaft der Gemeinschaft insgesamt war im vierten Quartal 1991 durch einen Stillstand in der Wachstumsentwicklung der Produktion (BIP 0,0 %) gekennzeichnet. Infolgedessen lag das auf der Grundlage der Daten der vierteljährlichen Gesamtrechnungen geschätzte Wirtschaftswachstum 1991 mit +1,2 % geringfügig unterhalb der Wachstumsprognose von +1,3 %. Die diese Phase der Stagnation bestimmenden Faktoren wurden in den vorangegangenen Monaten bereits ausführlich analysiert. Es dürfte jedoch angebracht sein, an dieser Stelle auf einen weiteren Faktor hinzuweisen, der für die zweite Hälfte des Jahres bezeichnend war, nämlich die Krise der japanischen Wirtschaft. Diese erneute Verlangsamung hat mit Sicherheit dazu beigetragen, daß sich der Wiederaufschwung der Weltwirtschaft verzögert. Nach dem derzeitigen Stand der Dinge könnte eine Tendenzumkehr ab 1992 möglich sein, die Konjunkturforscher selbst ziehen es indessen vor, sich nicht zu diesem Wiederaufschwung zu äußern, da er von zahlreichen Faktoren abhängig sei, zu denen insbesondere die von den Mitgliedstaaten eingeschlagene Währungspolitik zählen dürfte.

Bei der anhand des impliziten BIP-Deflators gemessenen Preisentwicklung ist eine sowohl jährlich als auch vierteljährlich gleichbleibende Inflation (+1,2 % bzw. +5,4 %) festzustellen. Dieses Ergebnis veranschaulicht einmal mehr die Bedeutung der von den meisten Mitgliedstaaten ergriffenen währungspolitischen Maßnahmen, die sich in einem erneuten Anstieg der Zinssätze gegen Ende Dezember niederschlugen.

Bei den BIP-Komponenten stellte der Rückgang der Investitionstätigkeit (-0,5 %) nach zwei eher positiven Quartalen die herausragende Entwicklung dieses Quartals dar. Andererseits war sowohl beim privaten Verbrauch als auch beim Staatsverbrauch eine leichte Aufwärtsbewegung (+0,5 %) festzustellen.

Was die Situation in den einzelnen Mitgliedstaaten betrifft, so ist der zweite aufeinanderfolgende Rückgang des BIP in Deutschland (-0,3 %) sowie die erneute Tendenzumkehr im Vereinigten Königreich nach dem leichten Aufschwung im dritten Quartal (BIP +0,1 %) hervorzuheben. In den übrigen Ländern war eine allgemeine Verlangsamung des Wirtschaftswachstums zu beobachten, der in Frankreich ausgeprägter ausfiel (BIP +0,1 %); lediglich in Italien war eine leichte Aufwärtsentwicklung zu verzeichnen (+0,3 %).

In den Vereinigten Staaten, aus denen erste Ergebnisse für das erste Quartal 1992 vorliegen, ist ein Wiedereinsetzen des Wirtschaftswachstums (+0,5 %) bei gleichzeitigem leichtem Anstieg der vierteljährlichen Inflationsrate (+0,7 %), jedoch rückläufiger jährlicher Inflationsrate (+2,5 %), festzustellen. Bei allen Komponenten der Inlandsnachfrage war im ersten Quartal 1992 ein deutlicher Anstieg zu erkennen, der besonders stark beim privaten Verbrauch und beim Staatsverbrauch ausfiel (+1,3 % bzw. 0,7 %). Die Investitionstätigkeit wies erstmals seit 1990 eine deutliche Zunahme aus (+0,7 %).

Japan erlebt eine Phase der Stagnation (BIP 0,0 %) bei gleichzeitigem spürbarem Anziehen sowohl der vierteljährlichen als auch der jährlichen Inflationsrate (+1,5 % bzw. +2,0 %). Bei den BIP-Komponenten ist auf den erneuten Rückgang der Investitionen (-0,9 %) und die deutliche Verlangsamung des privaten Verbrauchs (0,1 %), der Indessen ein geringfügiger Anstieg des Staatsverbrauchs gegenübersteht (+0,5 %), hinzuweisen.

**PREISE: Jährliche Inflationsrate in der EG auch im April bei 4,8 %**

Die über 12 Monate berechnete Inflationsrate für die gesamte EG blieb mit 4,8 % im April auf dem Stand vom März und ist somit seit November 1991 nahezu unverändert.

Zwischen März und April ist der monatliche Verbraucherpreisindex für EUR12 um 0,5 % gestiegen, hauptsächlich aufgrund des starken Anstiegs der Indizes für das VK (+1,5 %), Griechenland (+1,5 %) und Portugal (+1,6 %).

Die steigende Inflationsrate des VK spiegelt neben den im Haushalt angekündigten höheren Verbrauchsteuern auch deutliche Preissteigerungen in anderen Sektoren wieder.

Auch in Griechenland und Portugal wurden bei einer breiten Palette von Waren und Dienstleistungen Preisanstiege beobachtet.

Den hohen Preissteigerungsraten in diesen drei Mitgliedstaaten standen niedrige bis mittlere Anstiege der Verbraucherpreisindizes der übrigen Länder entgegen: Belgien +0,1 %, Dänemark, Frankreich und Luxemburg +0,2 %, Deutschland +0,3 %, Italien und die Niederlande +0,4 %. Der Index für Spanien zeigt gegenüber März einen Rückgang um 0,1 %.

Nachstehend eine Übersicht über die jährlichen Inflationsraten der EG-Mitgliedstaaten in aufsteigender Reihenfolge der derzeitigen Inflationsraten (April 1992 im Vergleich mit April 1991 und April 1991 im Vergleich mit April 1990):

	APRIL 92/91	APRIL 91/90		APRIL 92/91	APRIL 91/90
Dänemark	2,5 %	2,6 %	Niederlande	4,4 %	3,3 %
Belgien	2,8 %	2,9 %	Deutschland**	4,6 %	2,8 %
Frankreich	3,1 %	3,2 %	Italien	5,4 %	6,6 %
Luxemburg	3,6 %	2,9 %	Spanien	6,5 %	5,9 %
Irland*	3,7 %	3,1 %	Portugal	9,7 %	11,6 %
Vereinigtes Königreich	4,3 %	6,4 %	Griechenland	16,0 %	22,8 %

\* Irland: Februar 1992 im Vergleich zum Februar 1991

\*\* Der Verbraucherpreisindex für die Bundesrepublik Deutschland bezieht sich weiterhin auf den Gebietsstand bis zum 3. Oktober 1990.

<sup>1)</sup> Ohne Griechenland, für das keine Angaben über die Renditen von langfristigen Staatsanleihen vorliegen.

Die entsprechenden Raten für die USA und Japan betragen 3,2 % (4,9 %) bzw. 2,3 % (3,4 %).

Abschließend ist zu erwähnen, daß die jährliche Inflationsrate für Schweden von 10,7 % im April 1991 auf 2,1 % im April 1992 zurückging, so daß Schweden von allen Ländern, über die Eurostat in diesem Mitteilungsblatt Zahlenmaterial veröffentlicht, die niedrigste Rate aufweist.

### INDUSTRIELLE PRODUKTION: Rückgang der Investitionsgüterproduktion

Im Februar 1992 setzte sich die Stagnation der Produktionsentwicklung der Europäischen Industrie fort. Vor allem in der Investitionsgüterindustrie, die der Motor des nächsten Aufschwungs sein müßte, sank die Produktion. Der arbeitstäglich bereinigte Produktionsindex beträgt für die Europäische Gemeinschaft (EUR 12) zur Zeit 119,5 (1985 = 100). Dies entspricht einer Veränderungsrate gegenüber dem Februarwert von 1991 von 0,1 %. Die Investitionsgüterproduktion sank im gleichen Zeitraum um 2,0 %. Der saisonbereinigte Index beträgt im Februar (für die gesamte Industrie) 115,3, im Januar war er bei 114,9. Ein Vergleich der EG mit den USA und Japan zeigt für den Investitionsgüterbereich weltweit deutliche Einbrüche. Verglichen mit dem kumulierten Wert der drei Vormonate veränderte sich der saisonbereinigte Produktionsindex in den letzten drei Monaten Dezember, Januar und Februar in EUR 12 um -1,6 %, in den USA ebenfalls um -1,4 % und in Japan um -4,0 %.

Für die einzelnen Mitgliedstaaten der EG ist zur Zeit mit Ausnahme Irlands und Griechenlands ein relativ homogenes Bild zu beobachten: Die entsprechende Veränderungsrate der letzten drei Wintermonate im Vergleich zum kumulierten Wert der Vormonate des Herbst 1991 beträgt (jeweils zunächst die gesamte Industrieerzeugung, danach die Investitionsgüterindustrie in Klammern): die Niederlande 3,1 % (-0,4 %) [geschätzt], Irland 1,4 % (3,0 %) [geschätzt], Frankreich 0,7 % (-0,5 %), Dänemark 0,3 % (0,3 %), Deutschland (West) -0,3 % (-1,8 %), Griechenland -0,3 % (1,6 %) [geschätzt], Italien -0,8 % (-3,3 %), Vereinigtes Königreich -0,9 % (-1,9 %). Demnach stagniert oder sinkt in den meisten EG-Ländern die Industrieproduktion, wobei in den allermeisten Fällen die Produktion der Investitionsgüter besonders deutlich sinkt. Besonders auffallend ist die entsprechende Dreimonatswachstumsrate in den folgenden Wirtschaftszweigen: Maschinenbau: Frankreich +1,5 %, Vereinigtes Königreich -2,7 %, Deutschland -3,4 %, Italien -5,6 %; Automobilindustrie: Deutschland +2,8 %, Frankreich +0,3 %, Vereinigtes Königreich -2,3 %, Italien -6,4 %.

### Zahlungsbilanz

**GESAMTTENDENZEN: Drittes Quartal 1991 — Das Leistungsbilanzdefizit der Gemeinschaft verschlechtert sich um rund 13 Milliarden ECU gegenüber dem dritten Quartal 1990. Die amerikanische Leistungsbilanz verbessert sich um 9,5 Milliarden ECU, der japanische Leistungsbilanzüberschuß erhöht sich um 10,8 Milliarden.**

Die gegenwärtig zur Verfügung stehenden Zahlen lassen eine deutliche Verschlechterung der Leistungsbilanz der Gemeinschaft erkennen. So dürfte das Leistungsbilanzdefizit der ersten drei Quartale des Jahres insgesamt nahezu 39 Milliarden ECU betragen, während es im gleichen Zeitraum 1990 nur bei 7,2 Milliarden lag. Die Verschlechterung im Umfang von 31,8 Milliarden ist zu 29,7 Milliarden auf die Verschlechterung der gemeinschaftlichen Handelsbilanz zurückzuführen. Letztere wies nach einem geringfügigen Überschuß von 0,4 Milliarden während der ersten drei Quartale 1990 im gleichen Zeitraum 1991 ein Defizit von -29,1 Milliarden aus, verursacht durch eine starke Verringerung des deutschen Handelsbilanzüberschusses. Das Defizit der Dienstleistungs- und Übertragungsbilanz beläuft sich in den ersten drei Quartalen 1991 auf -9,9 Milliarden ECU, gegenüber -7,6 Milliarden im Vergleichszeitraum 1990.

Der amerikanische Leistungsbilanzsaldo verzeichnete während der ersten drei Quartale 1991 eine rasche Verbesserung: Nach einem kumulierten Defizit von 55,3 Milliarden ECU (68,7 Milliarden US-Dollar) während der ersten drei Quartale 1990 konnte nunmehr ein Überschuß von 1,4 Milliarden ECU (1,7 Milliarden US-Dollar) verbucht werden. Die Beitragszahlungen der alliierten Partner zur Finanzierung des Golfkrieges blähten die amerikanische Dienstleistungs- und Übertragungsbilanz auf, deren Saldo sich von 9,3 Milliarden ECU (11,5 Milliarden US-Dollar) während der ersten drei Quartale 1990 auf 45,4 Milliarden ECU (56 Milliarden US-Dollar) im gleichen Zeitraum 1991 erhöhte. Der größte Teil dieser Beiträge wurde indessen während der ersten beiden Quartale gezahlt. Auch das amerikanische Handelsbilanzdefizit weist eine deutliche Verbesserung auf, es verringerte sich von -64,4 Milliarden ECU (-80 Milliarden US-Dollar) während der ersten drei Quartale 1990 auf -44 Milliarden ECU (-54,3 Milliarden US-Dollar) im gleichen Zeitraum 1991. Im dritten Quartal 1991 sind die Verbesserungen jedoch weniger ausgeprägt als während der beiden ersten Quartale, und die Leistungsbilanz schließt mit einem Defizit von -9,1 Milliarden ECU (-10,7 Milliarden US-Dollar) ab.

Der japanische Leistungsbilanzüberschuß erreicht, über die ersten drei Quartale 1991 gerechnet, eine Höhe von 40 Milliarden ECU (6 714 Milliarden Yen), gegenüber 22,4

Milliarden ECU (4 153 Milliarden Yen) in den ersten drei Quartalen 1990. Die japanische Handelsbilanz entwickelt sich steil nach oben. In den ersten drei Quartalen hat sie sich um 22,5 Milliarden ECU verbessert, von dieser Verbesserung entfielen 10 Milliarden ECU auf das dritte Quartal 1991, 8,6 Milliarden auf das zweite und 3,5 Milliarden auf das erste Quartal. Im März hat Japan einen Beitrag in Höhe von 6,7 Milliarden ECU (8,6 Milliarden US-Dollar) zu den Kosten des Golfkrieges geleistet, was sich in einer Ausweitung des Dienstleistungs- und Übertragungsbilanzdefizits im ersten Quartal 1991 niederschlug.

Im dritten Quartal 1991 ist der deutsche Leistungsbilanzüberschuß gegenüber der Vergleichsperiode von 1990 um 11,4 Milliarden ECU gesunken. Ursächlich hierfür ist ein Rückgang des Handelsbilanzüberschusses um 4,6 Milliarden ECU und ein Anstieg des Defizits der Dienstleistungs- und Übertragungsbilanz um 2,7 Milliarden. Die französische Leistungsbilanz verbesserte sich um 1,8 Milliarden als Folge einer Reduzierung des Handelsbilanzdefizits um 1,3 Milliarden und einem Anstieg der Dienstleistungs- und Übertragungsbilanz um 0,5 Milliarden. Das britische Leistungsbilanzdefizit verringerte sich um 1,4 Milliarden ECU, das Handelsbilanzdefizit verringerte sich um 2,7 Milliarden gleichzeitig verminderte sich der Überschuß der Dienstleistungs- und Übertragungsbilanz um 1,4 Milliarden. Die italienische Leistungsbilanz sank um 3,1 Milliarden als Folge einer um 1,7 Milliarden gesunkenen Handelsbilanz und einer um 1,4 Milliarden gesunkenen Dienstleistungs- und Übertragungsbilanz. Die spanische und die dänische Leistungsbilanz verbesserten sich um 0,4 bzw. 0,3 Milliarden ECU während die portugiesische auf ihrem Niveau stehen blieb. Die niederländische Leistungsbilanz sank gegenüber dem Vorjahreszeitraum um 0,9 Milliarden ECU.

### AUSSENHANDEL

Im Januar 1992 betrug der Außenhandelsaldo der Gemeinschaft -8,8 Mrd. ECU. Das waren 1,7 Mrd. ECU weniger als im Januar 1991 (-10,5 Mrd. ECU). Hauptursache für das Außenhandelsdefizit der Gemeinschaft im Januar 1991 waren die Spannungen in der Golfregion; in diesem Monat waren die Auswirkungen der instabilen politischen Verhältnisse am deutlichsten zu spüren: Die Einfuhren stiegen im Vergleich zum entsprechenden Vorjahresmonat um fast 9 %, während die Ausfuhren um 4,5 % zurückgingen. Die Differenz zwischen der Entwicklungsrate der Einfuhren und der der Ausfuhren betrug 13 Prozentpunkte. Dieser Wert fiel im Januar 1992 auf 4 %, da die Einfuhren der Gemeinschaft aus Drittländern gegenüber dem hohen Niveau im Januar 1991 um annähernd 4 % zurückgingen und die Ausfuhren konstant blieben.

Der Rückgang der Kosten für die Energieversorgung der Gemeinschaft hat ebenfalls zum Abbau des Defizits im Januar 1992 beigetragen. Die Energieausgaben waren im Januar 1992 um fast 2 Mrd. niedriger als im Januar 1991: Die Kosten für die Rohölversorgung der Gemeinschaft gingen während dieses Zeitraums in Dollar um 30 % und in Ecu um 25 % zurück.

Die Vereinigten Staaten verzeichneten mit 5,3 Mrd. ECU ein niedrigeres Defizit als die Gemeinschaft mit 8,8 Mrd. ECU. Gegenüber Januar 1991 konnten die USA ihr Defizit um ungefähr 1 Mrd. ECU verringern. Die Ausfuhren stiegen im Vergleich zu der schwachen Entwicklung des entsprechenden Vorjahresmonats kräftig an: 9,4 % ausgedrückt in Ecu und 4,5 % in Dollar gerechnet. Die Einfuhren nahmen, in Ecu gerechnet, um 3,9 % zu, in Dollar ausgedrückt lagen sie jedoch um 1 % unter dem Wert des Vergleichsmonats 1991.

Der japanische Überschuß betrug im Januar 1992 6,5 Mrd. ECU und ist damit gegenüber dem Saldo des entsprechenden Vorjahresmonats um 2,8 Mrd. ECU gestiegen. Die Ausfuhren verzeichneten Zuwachsraten von 14,7 % ausgedrückt in Ecu, von annähernd 10 % in Dollar und 3 % in Yen gerechnet. Im Vergleich zum Wert vom Januar 1991 stagnierten die Einfuhren ausgedrückt in Ecu (0,4 %), und in Dollar bzw. Yen gerechnet gingen sie um 4 % bzw. 10 % zurück.

Das Außenhandelsdefizit der Gemeinschaft war im Januar 1992 niedriger als im entsprechenden Vorjahresmonat, da die Verschlechterung des deutschen Saldos (-1,1 Mrd.) durch die Verbesserung der Handelsbilanzen Italiens (+0,9 Mrd.), Frankreichs (+0,8 Mrd.) sowie des Vereinigten Königreichs, Spaniens und der BLWU (jeweils +0,3 Mrd.) ausgeglichen werden konnte. Portugal, Griechenland und Dänemark erzielten im Außenhandel nahezu die gleichen Ergebnisse wie im Januar 1991.

Der innergemeinschaftliche Handel ging im Januar 1992 um 2 % zurück und wies damit eine bessere Entwicklung als die außergemeinschaftlichen Einfuhren auf, die um fast 4 % abnahmen. Die Salden im Gesamthandel Frankreichs und Italiens lagen um 1,6 bzw. um 1,2 Mrd. ECU höher als im Januar 1991. Die Ergebnisse Portugals, Dänemarks und des Vereinigten Königreichs haben sich gegenüber Januar 1991 leicht verbessert (um 0,1 bis 0,3 Mrd.). Die Defizite der BLWU und Spaniens entsprechen weitgehend denen vom Januar 1991, während das Defizit Griechenlands etwas höher ist. Der Saldo Deutschlands hat sich um 0,6 Mrd. ECU verschlechtert.

Betrachtet man die Höhe der Salden, so schließt Deutschland im Januar 1992 mit der höchsten Bilanz ab, deren Saldo mit -0,1 Mrd. ECU nahezu ausgeglichen ist, danach folgt Portugal mit -0,4 Mrd. ECU. Frankreich, die BLWU und Griechenland weisen Defizite von weniger als 1 Mrd. ECU aus. Italien, Spanien und das Vereinigte Königreich haben mit -2 Mrd., -2,1 Mrd. bzw. -2,7 Mrd. ECU die am stärksten negativen Salden zu verbuchen.

## Foreword

*Eurostatistics – data for short-term economic analysis* – is a monthly publication aimed at providing, as rapidly as possible, the latest statistical data on the European Community as a whole (EUR 12), each Member State, the United States and Japan.

*Eurostatistics* does not present all the statistics held by Eurostat, but a selection of the most relevant series on the economic situation.

The series are published for the last 15 months, the last five quarters and the last four years, thus permitting short- or medium-term analysis with figures that may have been revised where necessary.

Speed of publication and punctuality are the main features of this publication; that is why it is deliberately streamlined and does not contain any methodological notes, which are given in Eurostat's specialized publications.

*Eurostatistics* comprises three sections:

- The 'In brief' section outlines the main recent events and trends in the economic, financial and social fields.
- The 'Graphs' section illustrates the most significant economic series for the Community, its Member States, the United States and Japan.
- The 'Short-term trends' section presents data harmonized by Eurostat on the basis of common criteria for the Member States as a whole, with comparisons with the USA and Japan.

The data published in *Eurostatistics* are taken from the ICG domain of Eurostat's on-line data bank, Cronos.

By linking up to Cronos it is possible to obtain daily the tables presented in this publication, containing data updated daily. The method of consultation can be found at the end of this publication.

Further information about *Eurostatistics* can be obtained from the following address:

Unless otherwise stated, data for the Federal Republic of Germany, including West Berlin, as constituted prior to 3 October 1990.

#### EXCHANGE RATES: Dollar depreciates against most major currencies

The US dollar depreciated against the currencies of most its major trading partners in April. Of the currencies surveyed, the only exceptions were against the Japanese yen and the Greek drachma; the yen in particular has recently been under pressure.

The average dollar depreciation against the currencies surveyed was 0.9%, although its average April value was still almost 5% higher than it was at the start of the year. However, this depreciation continued in the first weeks of May, with fears of another reduction in US interest rates contributing to the dollar's weakness, although when in the third week of the month the Federal Reserve did not reduce the Federal Funds rate, the dollar appreciated slightly once again.

In early May there were reductions in interest rates in the UK and in France, which were seen to be tests of the anchor role of the Deutschemark in the exchange rate mechanism (ERM) of the EMS. On May 5th, the Bank of England indicated that there should be a fall of 0.5% in UK banks' base rates, which now stand at 10%, their lowest level for some four years. Two days later the Banque de France engineered a fall in French banks' base rates by reducing the banks' reserve requirements from 4% to 1%; this avoided changing the official intervention rate. Neither reduction in rates had much effect on the currencies' position in the ERM, and in fact following the changes both appreciated against the DM; in the week of May 11th the French franc touched its' deutschemark central rate.

As was expected, following its entry into the exchange rate mechanism (ERM) of the EMS on April 6th, the escudo appreciated against the ecu in the following weeks, ending the month some 2% stronger than at the start. It is now (May 21st) above the peseta at the top of the ERM grid.

#### GOVERNMENT BOND YIELDS: German bond yields remain the lowest in the EC

Despite increasing slightly in April, the yield on German government bonds remains the lowest in the EC in nominal terms, standing at 8.2%. German bond yields have fallen from their peak of over 9% at the beginning of 1991, even though short-term rates remain at their peak levels. The relatively low level of German bond yields compared with those of the rest of Europe can perhaps be explained by the financial market's expectation that inflation in Germany will fall.

In March, the average yield on government bonds in the EC<sup>1</sup> was 9.5%, down from 9.7% in December 1991. Within the narrow band of the ERM, yields are slightly lower: 9.2% in March, down from 9.4% in December.

The real yield on government bonds can be seen in the following table:

#### Real Long term Interest Rates (monthly averages)

	9/91	12/91	3/92
Belgium	6.7	6.2	6.1
Denmark	7.3	6.5	6.1
Germany	4.8	4.3	3.3
Spain	5.8	6.3	4.4
France	6.7	6.1	5.9
Italy	5.2	4.8	6.2
Luxembourg	4.9	5.5	4.7
Netherlands	4.3	3.9	4.1
Portugal	4.4	4.7	4.0
UK	5.4	5.1	5.5
US	4.6	4.5	4.7
Japan	3.4	2.8	3.4

In the last six months, the real yields on government bonds has fallen in many EC countries, and in the UK, the Netherlands, the US and Japan yields have remained more or less constant. The largest falls in real yields have occurred in Germany, where inflation has risen by more than the fall in nominal yields.

Italy is the only EC country where real yields have risen in the last six months; Italian inflation has fallen whilst nominal bond yields stood at the same level in March as they had done in September 1991. It should be pointed out that high real interest rates seem to be a feature of some countries participating in the ERM, since higher nominal yields are required in order to maintain exchange rate parity, even after inflation has been reduced. This effect can be seen in Belgium, Denmark, France and even now in the UK, where inflation has fallen rapidly in the last 15 months, accompanied by only small falls in nominal bond yields.

#### MONEY SUPPLY: monthly data now available for Belgium

Monthly data on M1 and M2 are now available for Belgium, instead of the quarterly data which was previously available. There have been slight definitional changes to those data which are given here; the current annualised growth rate of M2 is just over 4%.

Data have also been revised in Italy; M2 now includes banker's drafts issued by both the Banca d'Italia and by other credit institutions, but does not now include securities re-purchase agreements and Post Office savings certificates. In addition, data are now given as a monthly average rather than on an end-month basis. The revisions have meant that the growth rate of the revised series are lower than previously: M2 growth in Italy in February 1992 was 7.4%, approaching the Banca d'Italia's 5-7% target range.

Monetary growth in Japan and in the United States continues to be very slow: in Japan M2 growth in 1991 was 2%, compared to 8.5% in 1990, and in the US M2 growth in the 12 months to January 1992 was 3.5%, much the same rate of growth as for the last 12 months.

In Greece the growth of M3 has accelerated again, after several months of annualised growth rates of less than 10%, in the first three months of 1992 the growth rate was between 10 and 11%. Even these higher rates are however within the Bank of Greece's target range for the growth of M3 of 9-12%.

<sup>1</sup> With the exception of Greece, for which no data on long-term government bond yields are available.

#### QUARTERLY ACCOUNTS: fourth quarter of 1991 sees European Community economy stagnate (GDP: 0.0%) and no change in inflation (+1.2%).

The fourth quarter of 1991 saw a lull in the growth of output for the European Community economy as a whole (GDP 0.0%). As a result, economic growth for 1991, estimated on the basis of the quarterly accounts, was 1.2%, slightly below the forecast growth of 1.3%. The factors determining this period of stagnation have been analysed in detail in previous months. However, it is worth highlighting a new factor which featured in the second half of the year, i.e. the crisis in the Japanese economy. This renewed slowdown undoubtedly played a part in delaying the upturn in the world economy. As things stand, 1992 may see a reversal of the trend, but even expert economic opinion is reticent on this point on the grounds that many factors are involved, in particular — it seems — the monetary policy adopted by the Member States.

As regards inflation measured by the implicit deflator of GDP, it is stable according to both the annual and quarterly figures (+5.4% and +1.2% respectively). These figures once again underline the importance of the tight monetary policies adopted by most Member States, which were characterized by a further rise in interest rates just before the end of December.

Looking at the components of GDP, this quarter was marked by the decline in investment (-0.5%) after two fairly positive quarters. Both private and public consumption picked up slightly (+0.5%).

As regards the situation in the Member States, GDP fell for the second successive quarter in Germany (-0.3%) and the United Kingdom experienced a fresh setback after the slight upturn in the third quarter (GDP: -0.1%). The other countries saw a general slowdown in economic growth, particularly so in France (GDP: +0.1%), with only Italy recording a slight upturn (+0.3%).

Initial results for the first quarter of 1992 for the United States show an upturn in economic growth (+0.5%) accompanied by a slight increase in quarterly inflation (+0.7%), whereas the annual figure shows inflation to be falling (+2.5%). Among the components of GDP, the first quarter of 1992 saw a marked increase for all components, particularly for private and public consumption (+1.3% and +0.7% respectively). Investment grew significantly for the first time since 1990 (+0.7%).

Japan recorded a period of stagnation (GDP: 0.0%) accompanied by a marked increase in both quarterly and annual inflation (+1.5% and +2.0% respectively). Among the components of GDP, investment saw a renewed downturn (-0.9%) and there was a marked slowdown in private consumption (-0.1%), whilst public consumption showed a slight upturn (+0.5%).

#### PRICES: EC annual inflation remains at 4.8% in April.

The inflation rate over the last 12 months for the EC as a whole remained unchanged from March to April at 4.8%, thus staying nearly at the same level since November 1991.

Between March and April the monthly CPI for EUR 12 rose by 0.5%, mainly due to sharp increases in the indices of the UK (+1.5%), Greece (+1.5%) and Portugal (+1.6%). The acceleration in the UK inflation reflected higher excise duties announced in the Budget, as well as marked increases in various other sectors.

Also in Greece and Portugal prices rose for a wide range of goods and services.

The sharp increase in this three Member States were offset by low to moderate rises in the CPI's of all the other countries: Belgium +0.1%, Denmark, France and Luxembourg +0.2%, Germany +0.3%, Italy and the Netherlands +0.4%. The Index for Spain shows a decline of 0.1% from March.

In increasing order of current inflation the annual inflation rates for the EC Member States are as follows: (April 1992 compared with April 1991 and April 1991 compared with April 1990):

	APRIL 92/91	APRIL 91/90		APRIL 92/91	APRIL 91/90
Denmark	2.5%	2.6%	Netherlands	4.4%	3.3%
Belgium	2.8%	2.9%	Germany**	4.6%	2.8%
France	3.1%	3.2%	Italy	5.4%	6.6%
Luxembourg	3.6%	2.9%	Spain	6.5%	5.9%
Ireland*	3.7%	3.1%	Portugal	9.7%	11.6%
United Kingdom	4.3%	6.4%	Greece	16.0%	22.8%

\* Ireland: February 1992 compared with February 1991

\*\* The CPI for the Federal Republic of Germany continues to reflect the geographic borders prior to 3 October 1990.

The corresponding figures for the United States and Japan are 3.2% (4.9%) and 2.3% (3.4%) respectively.

Finally it should be mentioned that the annual inflation rate for Sweden went down from 10.7% in April 1991 to 2.1% in April 1992, the lowest rate of all countries for which Eurostat publishes figures in this bulletin.

#### INDUSTRIAL PRODUCTION: Capital goods production down

February 1992 saw continuing stagnation in European industrial output. In particular, in the capital goods industry, which ought to fuel the next recovery, there was a fall in output. The production index for the European Community (EUR 12), adjusted for the number of working days, is currently 119.5 (1985=100), which is 0.1% up on the figure for February 1991. Capital goods production fell by 2.0% during the same period. The seasonally adjusted index stood at 115.3 in February (for industry as a whole), as against 114.9 in January. A comparison between the EC and the USA and Japan shows a distinct downward trend in worldwide production of capital goods: compared with the cumulative value for the three preceding months, the seasonally adjusted production index for the three months December, January and February was down 1.6% in EUR12, likewise 1.4% in the USA and 4.0% in Japan.

The individual EC Member States, with the exception of Ireland and Greece, currently present a relatively uniform picture: the rate of change for the last three winter months compared with the cumulative figures for the 1991 autumn months was as follows (total industrial production, followed by the capital goods industry in brackets): Netherlands 3.1% (-0.4%) [estimated], Ireland 1.4% (3.0%) [estimated], France 0.7% (-0.5%), Denmark 0.3% (0.3%), Germany (West) -0.3% (-1.8%), Greece -0.3% (1.6%) [estimated],

Italy -0.8% (-3.3%) and United Kingdom -0.9% (-1.9%). Thus industrial production is stagnating or declining in most EC countries, with particularly sharp falls in capital goods production in the vast majority of cases.

The three months growth rate is particularly striking in the following branches: Mechanical engineering: France +1.5%, United Kingdom -2.7%, Germany -3.4%, Italy -5.6%; Car industry: Germany +2.8%, France +0.3%, United Kingdom -2.3%, Italy -6.4%.

## BALANCE OF PAYMENTS

**Third quarter 1991 — Community's current-account deficit deteriorates by some ECU 13 000 million compared with third quarter in 1990; US current-account deficit improves by ECU 9 500 million and Japanese current-account surplus rises by ECU 10 ,8 billion.**

The figures currently available show a clear deterioration in the Community's current-account balance. Over the first three quarters of 1991, the current-account deficit is expected to reach some ECU 39 000 million, whereas over the same period in 1990 it was only ECU 7200 million. 29700 million of the increased deficit of 31800 million resulted from the deterioration in the Community's balance of trade, which moved from a modest surplus of 400 million for the first three quarters of 1990 to a deficit of 29 100 million for the same period in 1991 as a result of a sharp fall in the German trade surplus. The deficit on invisibles stood at ECU 9 900 million for the first three months of 1991 compared with a deficit of ECU 7600 million in 1990.

Over the first three quarters of 1991, the US current-account balance saw a rapid improvement, moving from a cumulative deficit of ECU 55300 million (\$68,7 billion) for the first three quarters of 1990 to a surplus of ECU 1400 million (\$ 1700 million). The US invisible balance was inflated by the payment of contributions from coalition partners to finance the Gulf War: it rose from ECU 9300 million (\$ 11 500 million) for the first three quarters of 1990 to ECU 45 400 million (\$56 000 million) in 1991. However, the bulk of these contributions was paid during the first two quarters. There was also a clear improvement in the trade deficit, which moved from - ECU 64 400 million (- \$ 80 000 million) for the first three quarters of 1990 to - ECU 44 000 million (- \$ 54 300 million) in 1991. However, the improvements for the third quarter of 1991 were less than those for the first two quarters and the current balance registered a deficit of ECU 9 100 million (\$ 10700 million).

The Japanese current-account surplus was ECU 40 billion (Yen 6.714 million million) for the first three quarters of 1991 compared with ECU 22400 million (Yen 4.153 million million) for the same period in 1990. The Japanese trade balance has been climbing sharply. Over the first three quarters of 1991 it rose by ECU 22 500 million: 10 million in the third quarter, 8 600 million in the second and 3 500 million in the first. In March, Japan paid a contribution of ECU 6 700 million (\$ 8 600 million) to the Gulf War effort; this was reflected in a worsening of the deficit on invisibles in the first quarter of 1991.

In the third quarter of 1991, the German current-account balance fell by ECU 11 400 million compared with the same period in 1990, reflecting a deterioration of 4 600 million in the trade surplus and of 2 700 million in the deficit on invisibles. The french current-account balance registered an improvement of ECU 1 800 million due to a reduction of 1 300 million in the trade deficit and an increase of 500 million in the surplus on invisibles. The British current-account deficit improved by ECU 1 400 million, the trade deficit was reduced by

2 700 million but the surplus on invisibles decreased by 1 400 million. The Italian current-account balance deteriorated by ECU 3 100 million, due to reductions of ECU 1 700 million in the balance of trade and of 1 400 million in the invisible balance. The Spanish and Danish current account balances improved of ECU 400 and 300 million respectively while the Portuguese current balance stood at the same level and the dutch current-account surplus fell by ECU 900 million.

## EXTERNAL TRADE

The Community's external trade deficit in January 1992 was ECU 8 800 million, an improvement of ECU 1 700 million on January 1991 (ECU 10 500 million). The political tensions in the Gulf seriously influenced the extra-Community deficit in January 1991, when the effects of this period of instability were most marked. In January 1991, imports were nearly 9% up on the same month the previous year, while exports were down by 4.5%: the difference between the rates for imports and exports was 13 points. This figure shrank to 4 points in January 1992, when extra-Community imports were nearly 4% lower than the high level for January 1991, while exports were stagnating at the level of January 1991. The drop in the cost of the Community's energy supplies from the January 1991 level played a part in reducing the deficit in January 1992, when the energy bill was nearly 2 000 million lower than for January 1991: the cost of the Community's crude oil supplies was down 30% in dollar terms between these two periods and by 25% in ECU terms.

The United States' deficit was lower than the Community's: ECU 5 300 million against ECU 8 800 million. The United States' figure was an improvement of around ECU 1 000 million on January 1991. Exports showed a distinct improvement of 9.4% in ECU and 4.5% in dollars on the poor performance of January 1991. Imports were up by 3.9% on January 1991 in ECU terms but down 1% in dollar terms Japan's surplus for January 1992 was ECU 6 500 million, a rise of 2 800 million on January 1991. The increase in exports of 14.7% on January 1991 in ECU terms came to nearly 10% in dollar terms but only 3% in yen. Imports were all but stagnant compared with their January 1991 level in ECU terms (0.4%) and were down by 4% in dollars and by 10% in yen.

The extra-Community trade deficit was less than in January 1991, because the 1 100 million decline in the German surplus was offset by improved figures for Italy (+900 million), France (+800 million), the United Kingdom, Spain and the BLEU (+300 million each). The extra-Community trade balances in Portugal, Greece and Denmark were similar to those for January 1991.

Intra-Community trade contracted by 2% in January 1992, apparently less affected than extra-Community exports, which fell by nearly 4%.

In France and Italy, the trade balances were ECU 1 600 and 1 200 million respectively stronger than in January 1991. Portugal, Denmark and the United Kingdom produced slightly better results than in January 1991 (up by 100 to 300 million). The deficits in the BLEU and Spain were similar to those for January 1991, while Greece's had grown slightly. Germany's surplus fell by ECU 600 million.

In terms of level, Germany could boast the healthiest balance sheet in January 1992, almost breaking even at -ECU 100 million, followed by Portugal at -400 million. France, the BLEU and Greece showed deficits of just under ECU 1 000 million. Italy, Spain and the United Kingdom had the heaviest deficits, of -ECU 2 000 million, -2 100 million and -2 700 million respectively.

«Eurostatistiques – Données pour l'analyse de la conjoncture» est une publication mensuelle qui a comme but de fournir dans les meilleurs délais les données statistiques les plus récentes pour la Communauté européenne en tant qu'ensemble (EUR 12), pour les pays membres ainsi que pour leurs principaux partenaires extracommunautaires (États-Unis d'Amérique et Japon).

«Eurostatistiques» ne publie pas d'une manière exhaustive toutes les statistiques disponibles auprès d'Eurostat, mais les importantes parmi celles-ci.

Afin de permettre des analyses diverses et, si nécessaire, à plus long terme, sont publiées généralement des données annuelles sur une période de quatre ans, des données trimestrielles pour les cinq derniers trimestres et des données mensuelles pour les quinze derniers mois disponibles.

Cette publication se veut rapide et facilement maniable. Pour cette raison, elle ne comporte pas de notes méthodologiques, disponibles d'ailleurs dans les publications spécialisées d'Eurostat.

«Eurostatistiques» contient trois types d'informations, actualisés mensuellement:

- la rubrique «en bref» commente les principaux événements et tendances résultant des évaluations récentes;
- la partie «Graphiques» illustre les séries économiques les plus importantes pour la Communauté, les États membres, les États-Unis et le Japon;
- la partie «Données conjoncturelles» présente des données harmonisées par Eurostat sur la base des critères communs, pour l'ensemble des États membres et avec des comparaisons avec les États-Unis et le Japon;

Les données publiées dans «Eurostatistiques» proviennent du domaine «ICG» de la base de données Cronos.

En se connectant à Cronos, il est possible de suivre la mise à jour des tableaux de cette publication journalièrement en consultant les données en temps réel. Le mode de consultation «on line» se trouve à la fin de cette publication.

Sauf indications contraires, les données portent sur le territoire de la République fédérale d'Allemagne avant le 3.10.1990, Berlin-Ouest inclus.

**TAUX DE CHANGE: Dépréciation du dollar par rapport à la plupart des principales monnaies**

Au mois d'avril, le dollar des Etats-Unis s'est déprécié par rapport à la monnaie de la plupart de ses principaux partenaires commerciaux. Parmi les monnaies observées, les seules exceptions à cet égard sont le yen japonais et la drachme grecque; le yen en particulier a subi des pressions au cours des derniers temps.

La dépréciation moyenne du dollar par rapport aux monnaies observées s'est élevée à 0,9 %. Sa valeur moyenne d'avril n'en restait pas moins encore supérieure de près de 5 % à son niveau du début de l'année, mais la tendance à la dépréciation s'est poursuivie durant les premières semaines de mai, les craintes d'une nouvelle réduction des taux d'intérêt aux Etats-Unis contribuant à la faiblesse du dollar; cependant, comme la Réserve fédérale n'a pas réduit le taux des Federal Funds durant la troisième semaine du mois, le dollar s'est à nouveau légèrement apprécié.

Au début du mois de mai, les taux d'intérêt ont été réduits au Royaume-Uni et en France; ces réductions ont été considérées comme une mise à l'épreuve du rôle central du DM dans le mécanisme de change du SME. Le 5 mai, la Bank of England a annoncé qu'il devrait y avoir une diminution de 0,5 % des taux de base bancaires au Royaume-Uni qui s'établissent à présent à 10 %, niveau le plus bas depuis quatre ans environ. Deux jours plus tard, la Banque de France a provoqué une baisse des taux de base bancaires français en ramenant de 4 % à 1 % les réserves obligatoires des banques; cela a permis d'éviter de modifier le taux d'intervention officiel. Aucune de ces deux réductions n'a eu beaucoup d'effet sur la position des monnaies dans le mécanisme de change; en fait, à la suite de la modification des taux, les deux monnaies se sont appréciées par rapport au DM. Au cours de la semaine du 11 mai, le franc français a atteint son taux central par rapport au DM. Comme prévu, l'escudo s'est apprécié par rapport à l'écu au cours des semaines ayant suivi son entrée dans le mécanisme de change du SME le 6 avril et il a fini le mois avec 2 % de hausse par rapport au début. Il se situe à présent (21 mai) au-dessus de la peseta, au sommet de la grille des parités.

**RENDEMENTS DES OBLIGATIONS DU SECTEUR PUBLIC: Les rendements allemands restent les plus faibles de la CE**

Malgré une légère augmentation en avril, le rendement des obligations publiques allemandes reste le plus faible de la CE en termes nominaux, à 8,2 %. Les rendements des obligations allemandes ont chuté par rapport à leur maximum — plus de 9 % — atteint au début de 1991, bien que les taux à court terme se soient maintenus à leur haut niveau. Les rendements relativement faibles des obligations allemandes par rapport à ceux du reste de l'Europe s'expliquent peut-être par les anticipations du marché financier qui s'attend à un recul de l'inflation en Allemagne.

En mars, le rendement moyen des obligations du secteur public dans la CE <sup>1)</sup> s'élevait à 9,5 %, contre 9,7 % en décembre 1991. A l'intérieur de la marge étroite du mécanisme de change, les rendements sont légèrement plus faibles: 9,2 % en mars contre 9,4 % en décembre.

Le rendement réel des obligations publiques est présenté dans le tableau suivant:

**Taux d'intérêt réels à long terme (moyennes mensuelles)**

	9/91	12/91	3/92
Belgique	6,7	6,2	6,1
Danemark	7,3	6,5	6,1
Allemagne	4,8	4,3	3,3
Espagne	5,8	6,3	4,4
France	6,7	6,1	5,9
Italie	5,2	4,8	6,2
Luxembourg	4,9	5,5	4,7
Pays-Bas	4,3	3,9	4,1
Portugal	4,4	4,7	4,0
Royaume-Uni	5,4	5,1	5,5
Etats-Unis	4,6	4,5	4,7
Japon	3,4	2,8	3,4

Au cours des six derniers mois, les rendements réels des obligations du secteur public ont diminué dans de nombreux pays de la CE, tandis qu'ils sont restés à peu près constants au Royaume-Uni, aux Pays-Bas, aux Etats-Unis et au Japon. Les diminutions les plus fortes des rendements réels se sont produites en Allemagne où l'inflation a enregistré une hausse supérieure à la diminution des rendements nominaux.

L'Italie est le seul pays de la CE dans lequel les rendements réels se sont accrus au cours des six derniers mois; le taux d'inflation y a baissé, tandis que les rendements nominaux des obligations se situaient en mars au même niveau qu'en septembre 1991. Il convient de noter que des taux d'intérêt réels élevés paraissent être une caractéristique d'un certain nombre de pays participant au mécanisme de change, puisque des rendements nominaux plus élevés sont nécessaires afin de maintenir la parité des taux de change, même après la réduction de l'inflation. Cet effet peut s'observer en Belgique, au Danemark, en France et même, à présent, au Royaume-Uni où l'inflation a fortement diminué au cours des 15 derniers mois, alors que les rendements nominaux des obligations n'ont enregistré que de faibles baisses.

**DISPONIBILITES MONETAIRES: Des données mensuelles sont à présent disponibles pour la Belgique**

Il existe à présent pour la Belgique des données mensuelles sur M1 et M2 qui remplacent les données trimestrielles disponibles auparavant. De légères modifications ont été apportées à la définition de ces données le taux d'accroissement de M2 s'élève actuellement à un peu plus de 4 % en rythme annuel.

Les données ont également été révisées en Italie; M2 englobe maintenant les traites bancaires émises par la Banca d'Italia et par d'autres institutions de crédit, mais pas les

accords de rachat de titres et les certificats d'épargne de la Poste. En outre, les données sont à présent indiquées sous la forme d'une moyenne mensuelle et non sur une base de fin de mois. Ces révisions ont eu pour effet d'entraîner une diminution du taux d'accroissement dans les séries révisées: le taux de croissance de M2 en Italie s'élève à 7,4 % en 1992, se rapprochant ainsi de la fourchette visée par la Banca d'Italia (5-7 %).

Au Japon et aux Etats-Unis, la croissance monétaire reste très lente: au Japon, M2 s'est accru de 2 % en 1991, contre 8,5 % en 1990, tandis qu'aux Etats-Unis, le taux d'accroissement de M2 était de 3,5 % pour les douze mois allant jusqu'en janvier 1992, soit à peu près le même que durant les douze mois précédents.

En Grèce, la croissance de M3 s'est à nouveau accélérée; après plusieurs mois de taux annualisés inférieurs à 10 %, le rythme de croissance était compris entre 10 et 11 % pendant les trois premiers mois de 1992. Cependant, ces taux plus élevés se situent encore à l'intérieur de la fourchette de 9 à 12 % d'accroissement de M3 visée par la Banque de Grèce.

**COMPTES TRIMESTRIELS: Au cours du quatrième trimestre 1991: phase de stagnation de l'économie communautaire (PIB +0,0 %) accompagnée par une inflation inchangée (+1,2 %).**

Le quatrième trimestre 1991 a été caractérisé, pour l'économie communautaire dans son ensemble, par un temps d'arrêt dans le rythme de croissance de la production (PIB +0,0 %). A cause de ce temps d'arrêt la croissance économique en 1991, estimée sur la base des données de comptabilité trimestrielle, a été de (+1,2 %), légèrement au-dessous de la croissance prévue qui était de (+1,3 %). Les éléments qui déterminent cette phase de stagnation ont été analysés en détail dans les mois précédents. Nous croyons quand même utile de mettre en évidence un nouveau élément qui a caractérisé la deuxième partie de l'année, c'est-à-dire la crise de l'économie japonaise. Ce nouveau ralentissement a certainement contribué à retarder la reprise de l'économie mondiale. En l'état actuel des choses, une inversion de tendance apparaît possible à partir de 1992, mais les conjoncturistes mêmes préfèrent ne pas se prononcer à propos de cette reprise en liant ceci à beaucoup de facteurs dont un des plus importants semble être la politique monétaire adoptée par les Etats membres.

En ce qui concerne l'évolution des prix, mesurée par le déflateur implicite du PIB, on constate une inflation stable tant en rythme annuel que trimestriel (+1,2 % et +5,4 % respectivement). Ce résultat met encore plus en évidence l'importance des politiques monétaires restrictives adoptées dans la plupart des Etats membres et qui ont été caractérisées par une nouvelle hausse des taux d'intérêt intervenue juste avant la fin de décembre.

En ce qui concerne les composantes du PIB, le fait marquant de ce trimestre est représenté par le fléchissement des investissements (-0,5 %) après deux trimestres plutôt positifs. Par ailleurs, tant la consommation privée que publique sont caractérisées par une légère reprise (+0,5 %).

En ce qui concerne la situation dans les Etats membres, il faut remarquer le deuxième fléchissement consécutif d PIB en Allemagne (-0,3 %) ainsi que la nouvelle inversion de tendance enregistrée au Royaume-Uni après la légère reprise du troisième trimestre (PIB -0,1 %). Les autres pays sont caractérisés par un ralentissement généralisé de la croissance économique, plus remarquable en France (PIB +0,1 %), sauf en Italie où on observe une légère reprise (+0,3 %).

Aux Etats-Unis, dont on dispose des premiers résultats relatifs au premier trimestre 1992, on constate une reprise de la croissance économique (+0,5 %) accompagnée par une légère hausse de l'inflation trimestrielle (+0,7 %) tandis qu'en rythme annuel on constate une baisse (+2,5 %). Parmi les composantes de la demande interne, le premier trimestre 1992 montre une sensible reprise de toutes les composantes plus remarquable pour la consommation tant privée que publique (+1,3 % +0,7 % respectivement). D'autres part, les investissements présentent pour la première fois depuis 1990, une croissance significative (+0,7 %).

Pour le Japon on observe une phase de stagnation (PIB +0,0 %) accompagnée par une sensible reprise de l'inflation tant trimestrielle qu'annuelle (+1,5 % et +2,0 %). Parmi les composantes du PIB, il faut souligner le nouveau fléchissement des investissements (-0,9 %) ainsi que le sensible ralentissement de la consommation privée (-0,1 %), tandis que la consommation publique montre une légère reprise (+0,5 %).

**PRIX: L'inflation annuelle de la CE se maintient: 4,8 % en avril.**

Le taux d'inflation de 4,8 % au cours des 12 derniers mois pour l'ensemble de la CE est resté inchangé entre mars et avril 1992. Ce taux est pratiquement au même niveau depuis novembre 1991.

Entre mars et avril l'IPC mensuel pour EUR 12 a augmenté de 0,5 %, principalement à cause des hausses très sensibles des indices du Royaume-Uni (+1,5 %), de la Grèce (+1,5 %) et du Portugal (+1,6 %).

L'accélération de l'inflation au Royaume-Uni est attribuable aux majorations des taxes annoncées dans le Budget, ainsi qu'aux hausses sensibles dans différents autres secteurs. Aussi en Grèce et au Portugal les prix pour un grand nombre de biens et services ont cru fortement.

Les fortes hausses dans ces trois Etats Membres ont été compensées par des accroissements faibles à modérés dans tous les autres pays: Belgique (+0,1 %), Danemark, France et Luxembourg (+0,2 %), Allemagne (+0,3 %), Italie et Pays Bas (+0,4 %).

L'IPC de l'Espagne montre un recul de 0,1 % par rapport à mars. Dans l'ordre croissant de l'inflation actuelle les taux annuels d'inflation des Etats Membres sont les suivants:

	AVRIL 92/91	AVRIL 91/90	AVRIL 92/91	AVRIL 91/90
Danemark	2,5 %	2,6 %	Pays-Bas	4,4 % 3,3 %
Belgique	2,8 %	2,9 %	Allemagne**	4,6 % 2,8 %
France	3,1 %	3,2 %	Italie	5,4 % 6,6 %
Luxembourg	3,6 %	2,9 %	Espagne	6,5 % -5,9 %
Irlande*	3,7 %	3,1 %	Portugal	9,7 % 11,6 %
Royaume-Uni	4,3 %	6,4 %	Grèce	16,0 % 22,8 %

\* Irlande: février 1992 comparé à février 1991.

\*\* L'IPC pour la RF d'Allemagne continue à se rapporter à la situation territoriale avant le 3 octobre 1990.

Les taux correspondants pour les Etats-Unis et le Japon sont respectivement de 3,2 % (4,9 %) et 2,3 % (3,4 %).

Il est à signaler que le taux annuel d'inflation de la Suède est passé de 10,7 % en avril 1991 à 2,1 % en avril 1992, ce qui est le taux le plus bas de tous les pays pour lesquels Eurostat publie les évolutions dans ce bulletin.

## PRODUCTION INDUSTRIELLE: Recul de la production de biens d'investissement

En février 1992, la stagnation de la production industrielle européenne s'est poursuivie. Dans l'industrie des biens d'investissement notamment qui devait être le moteur de la reprise prochaine, la production a diminué. L'indice de production corrigé du nombre de jours ouvrables est actuellement de 119,5 (1985=100) pour la Communauté européenne (EUR 12), ce qui correspond à un taux de variation de 0,1 % par rapport à la valeur de février 1991. La production de biens d'investissement a fléchi de 2,0 % au cours de la même période. L'indice corrigé des variations saisonnières est de 115,3 en février (pour l'ensemble de l'industrie), contre 114,9 en janvier.

Si l'on compare la CE avec les Etats-Unis et le Japon, on constate dans le monde entier un net recul pour le secteur des biens d'investissement: par rapport à la valeur cumulée des trois mois précédents, l'indice de production corrigé des variations saisonnières a enregistré au cours des trois derniers mois, décembre, janvier et février, une baisse de 1,6 % pour EUR 12, une baisse de 1,4 % également pour les Etats-Unis et de 4 % pour le Japon.

Pour les différents Etats membres de la CE, le tableau est actuellement assez homogène à l'exception de l'Irlande et de la Grèce: les taux de variation correspondants pour les trois derniers mois de l'hiver comparés à la valeur cumulée des mois précédents de l'automne 1991 sont les suivants (taux de variation de la production industrielle dans son ensemble d'abord, suivi, entre parenthèses, du taux de variation de l'industrie des biens d'investissement): Pays-Bas 3,1 % (-0,4 %) [estimation], Irlande 1,4 % (3,0 %) [estimation], France 0,7 % (-0,5 %), Danemark 0,3 % (0,3 %), Allemagne (Ouest) -0,3 % (-1,8 %), Grèce -0,3 % (1,6 %) [estimation], Italie -0,8 % (-3,3 %), Royaume-Uni -0,9 % (-1,9 %). On constate donc que dans la plupart des pays CE, la production industrielle stagne ou fléchit, la production des biens d'investissement étant particulièrement touchée dans la très grande majorité des cas.

Le taux de croissance de trois mois est particulièrement frappant pour les branches suivantes: Construction de machines: France +1,5 %, Royaume-Uni -2,7 %, Allemagne -3,4 %, Italie -5,6 %; Construction d'automobiles: Allemagne +2,8 %, France +0,3 %, Royaume-Uni -2,3 %, Italie -6,4 %.

## BALANCE DES PAIEMENTS

**Tendances mondiales: Troisième trimestre 1991. Le déficit des paiements courants communautaires se dégrade de près de 13 milliards d'écus par rapport au troisième trimestre 1990. Le déficit courant américain s'améliore de 9,5 milliards d'écus et l'excédent courant japonais de 10,8 milliards.**

Les chiffres actuellement disponibles, montrent une nette dégradation de la balance courante communautaire. Sur les trois premiers trimestres de l'année, le déficit courant atteindrait près de 39 milliards (Mrds) d'écus, sur la même période en 1990, il atteignait seulement 7,2 Mrds. Sur 31,8 Mrds de dégradation 29,7 Mrds proviennent de la dégradation du solde commercial communautaire. Celui-ci passe d'un léger excédent de 0,4 Mrd sur les trois premiers trimestres de 1990 à un déficit de -29,1 Mrds sur la même période de 1991, en raison d'une forte contraction de l'excédent commercial allemand. Le déficit des invisibles atteint -9,9 Mrds d'écus sur les trois premiers mois de 1991 après -7,6 Mrds en 1990.

Sur les trois premiers trimestres de 1991, le solde courant américain a connu une rapide amélioration, il est passé d'un déficit cumulé de 55,3 Mrds d'écus (\$68,7 Mrds) sur trois trimestres de 1990 à un excédent de 1,4 Mrd d'écus (\$1,7 Mrd). Le versement des contributions des partenaires de la coalition au financement de la guerre du Golfe a gonflé le solde des invisibles américains qui passe de 9,3 Mrds d'écus (\$11,5 Mrds) sur les trois premiers trimestres de 1990 à 45,4 Mrds (\$56 Mrds) en 1991. Toutefois, la majeure partie de ces contributions a été versée au cours des deux premiers trimestres. Le déficit commercial enregistre également une nette amélioration, il est passé de -64,4 Mrds d'écus (\$ -80 Mrds) sur les trois premiers trimestres de 1990 à -44 Mrds (\$ -54,3 Mrds) en 1991. Sur le troisième trimestre 1991, les améliorations sont toutefois moindres qu'au cours des deux premiers trimestres et le solde courant s'inscrit en déficit de -9,1 Mrds d'écus (\$ -10,7 Mrds).

L'excédent japonais des paiements courants atteint 40 Mrds d'écus (Yen 6714 Mrds) sur les trois premiers trimestres de 1991, à comparer à 22,4 Mrds (Yen 4153 Mrds) sur les trois premiers trimestres de 1990. La balance commerciale japonaise, est en forte progression. Sur trois trimestres, elle s'améliore de 22,5 Mrds d'écus dont 10 Mrds au troisième trimestre 1991, 8,6 Mrds au second et 3,5 Mrds au premier. En mars, le Japon a effectué un versement de 6,7 Mrds d'écus (8,6 Mrds de \$), pour contribuer à l'effort de guerre dans le Golfe; cela se traduit par une aggravation du déficit des invisibles au premier trimestre 1991.

Au troisième trimestre 1991, par rapport au troisième trimestre 1990, la balance courante allemande s'est réduite de 11,4 Mrds d'écus sous l'effet d'une détérioration de 4,6 Mrds de l'excédent commercial et de 2,7 Mrds du déficit des invisibles. La balance courante française s'est améliorée de 1,8 Mrd grâce à une réduction de 1,3 Mrds du déficit commercial et à un accroissement de 0,5 Mrd de l'excédent des invisibles. Le déficit courant britannique s'est réduit de 1,4 Mrd, le déficit commercial s'est réduit de 2,7 Mrd mais l'excédent des invisibles a perdu 1,4 Mrd. La balance courante italienne s'est détériorée de 3,1 Mrds d'écus sous l'effet d'une baisse de 1,7 Mrd de la balance des services et de 1,4 Mrd de la balance des invisibles. Les balances courantes espagnoles et danoises se sont améliorées respectivement de 0,4 et 0,3 Mrd d'écus, la balance courante portugaise est restée stable et l'excédent courant des Pays-Bas s'est réduit de 0,9 Mrd.

## COMMERCE EXTERIEUR

En janvier 1992, le solde des échanges extra-communautaires atteint -8,8 Mrds d'écus, ce déficit est moins lourd de 1,7 Mrd d'écus que celui de janvier 1991 (-10,5 Mrds d'écus). Les tensions politiques dans le Golfe ont fortement pesé sur le déficit extra-communautaire de janvier 1991, qui reste le mois le plus affecté de cette période d'instabilité. En janvier 1991, les importations progressent de près de 9% par rapport au même mois de l'année précédente, tandis que les exportations sont en retrait de 4,5%: l'écart entre taux d'évolution des importations et des exportations est de 13 points. Ce chiffre est ramené à quatre points en janvier 1992, en effet les importations extra-communautaires sont inférieures de près de 4% comparées au niveau élevé de janvier 1991, tandis que les exportations stagnent par rapport à janvier 1991.

La baisse du coût d'approvisionnement de la Communauté en énergie par rapport à janvier 1991 contribue à l'allègement du déficit en janvier 1992. La facture énergétique de janvier 1992 est moins élevée de près de 2 Mrds comparée à celle de janvier 1991: le coût d'approvisionnement de la Communauté en pétrole brut a baissé de 30% en dollars entre ces deux périodes, et de 25% en écus.

Les Etats-Unis enregistrent un déficit réduit par rapport à celui de la Communauté: 5,3 Mrds d'écus contre 8,8 Mrds. Le solde des Etats-Unis est en amélioration d'un milliard d'écus environ, par rapport à janvier 1991. Les exportations connaissent une progression forte par rapport au niveau atone de janvier 1991: soit 9,4% en écus, et 4,5% en dollars. Les importations augmentent de 3,9% en écus, mais sont en retrait de 1% par rapport à janvier 1991, en termes de dollars.

L'excédent japonais de janvier 1992 est de 6,5 Mrds d'écus, supérieur de 2,8 Mrds au solde de janvier 1991. La progression des exportations en écus: +14,7% par rapport à janvier 1991, est ramenée à près de 10% en dollars, et à 3% en yens. Les importations stagnent comparées à leur niveau de janvier 1991, exprimé en écus (0,4%), elles baissent de 4% en dollars et de 10% en yens.

Le commerce extra-communautaire dégage un déficit moindre par rapport à janvier 1991 car la réduction du solde allemand (de 1,1 Mrd) est compensée par l'amélioration des résultats de l'Italie (+0,9 Mrd), de la France (+0,8 Mrd), ainsi que du Royaume Uni, de l'Espagne, et de l'UEBL (+0,3 Mrd chacun). Le bilan des échanges extra du Portugal, de la Grèce, et du Danemark sont semblables à ceux de janvier 1991.

Le commerce intra-communautaire baisse de 2% en janvier 1992, il semble moins affecté que les importations extra-communautaires, qui régressent de près de 4%.

Les soldes des échanges totaux de la France, et de l'Italie sont en progrès respectivement de 1,6 et 1,2 Mrds d'écus par rapport à janvier 1991. Les résultats du Portugal, du Danemark, du Royaume Uni sont légèrement meilleurs que ceux de janvier 1991 (de 0,1 à 0,3 Mrds plus élevés). Les déficits de l'UEBL et de l'Espagne sont semblables à ceux de janvier 1991, tandis que celui de la Grèce est un peu plus lourd. L'Allemagne voit son solde se dégrader de 0,6 Mrd d'écus.

En terme de niveau l'Allemagne présente le bilan le plus élevé en janvier 1992, avec un solde quasiment équilibré: -0,1 Mrd d'écus, puis vient le Portugal avec -0,4 Mrd. La France, l'UEBL, la Grèce sont déficitaires de moins d'un milliard d'écus. L'Italie, l'Espagne, le Royaume-Uni ont les soldes les plus fortement négatifs, avec respectivement -2 Mrds, -2,1 Mrds, et -2,7 Mrds.

## „On line“-Abfrage

Eurostatistik beinhaltet zwei verschiedene Tabellentypen:

1. Variablen tabellen – 1 Variable pro Tabelle
2. Ländertabellen – ungefähr 30 Variable pro Land

Jede Zeitreihe ist durch einen neunstelligen numerischen Kode gekennzeichnet, der seinerseits in Unterkodes gegliedert ist, welche – im Falle von „Eurostatistik“ – das Land, den Sektor, die Tabelle, die Einheit und die Periodizität bezeichnen.

Die Bedeutung der einzelnen Unterkodes ist der nachstehend aufgeführten Tabelle zu entnehmen.

Land XX	Sektor XX	Tabelle XXXX	Periodizität und Einheit X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	<p>A. Ländertabellen</p> <p>00XX vor dem Titel jeder Variable</p> <p>(siehe Liste auf der nächsten Seite)</p>	<p>0 jährlich, Angaben in Prozent</p> <p>1 vierteljährlich, Angaben in Prozent</p> <p>2 monatlich, Angaben in Prozent</p> <p>3 jährlich, Indexangaben (1985 = 100)</p> <p>4 vierteljährlich, Indexangaben (1985 = 100)</p> <p>5 monatlich, Indexangaben (1985 = 100)</p> <p>6 jährlich, Angaben in absoluten Werten</p> <p>7 vierteljährlich, Angaben in absoluten Werten</p> <p>8 monatlich, Angaben in absoluten Werten</p> <p>9 Gewicht, EUR 10 = 100 bzw. EUR 12 = 100 (nicht vorhanden für die Ländertabellen)</p>

Beispiele:

1. *Variablen tabelle*: Will man die monatliche Arbeitslosigkeit (in absoluten Zahlen) von Deutschland gemäß Tabelle 0304 dieser Veröffentlichung erfahren, so braucht man nur den Kode 12 93 0304 8 einzugeben.

2. *Ländertabelle*: Will man den Preisindex von Frankreich auf der Basis 1980 = 100 gemäß der Tabelle „Frankreich“ dieser Veröffentlichung erfahren, so braucht man nur den Kode 14 93 0031 3 (jährliche Angaben) oder 14 93 0031 5 (monatliche Angaben) einzugeben.

## ‘On-line’ consultation

Eurostatistics consists of two types of tables:

1. Table by indicators – 1 indicator by table;
2. Table by country including approximately 30 indicators by country.

Each time series is identified by a nine-digit code broken down into subcodes, which in the case of Eurostatistics, represent the country, sector, table, unit and periodicity.

The significance of the different subcodes may be found in the table below.

Country XX	Sektor XX	Table XXXX	Periodicity and unit X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	<p>A. Table by indicator</p> <p>XXXX 4-digit value quoted in the title of each table</p> <hr/> <p>B. Table by country</p> <p>00XX before each indicator (see following page)</p>	<p>0 annual in %</p> <p>1 quarterly in %</p> <p>2 monthly in %</p> <p>3 annual index 1985 = 100</p> <p>4 quarterly index 1985 = 100</p> <p>5 monthly index 1985 = 100</p> <p>6 annual absolute value</p> <p>7 quarterly absolute value</p> <p>8 monthly absolute value</p> <p>9 weighting EUR 10 = 100 or EUR 12 = 100 (does not exist for tables by country)</p>

Consultation example:

1. *Table by indicator*: to know the monthly unemployment (absolute figures) of Germany as is shown in Table 0304 of this publication, the code 12 93 0304 8 should be formed.
2. *Table by country*: to know the price index, 1980 = 100 for France as shown in the France table of this publication, the code 14 93 0031 3 should be formed for annual figures and 14 93 0031 5 for monthly figures.

## Mode de consultation «on-line»

Eurostatistiques comprend deux types de tableaux:

- 1) tableaux par variable – 1 variable par tableau;
- 2) tableaux par pays comprenant environ 30 variables par pays.

Chaque série chronologique est identifié par un code à neuf chiffres structuré en sous-codes représentant, dans le cas d'Eurostatistiques, le pays, le secteur, le tableau, l'unité et la périodicité.

On trouvera dans le tableau ci-dessous la signification des différents sous-codes.

Pays XX	Secteur XX	Tableau XXXX	Périodicité et unité X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	<p>A – Tableaux par variable</p> <p>XXXX valeur à 4 chiffres figurant dans le titre de chaque tableau</p> <hr/> <p>B – Tableaux par pays</p> <p>00XX devant le titre de chaque variable</p> <p>(voir liste page suivante)</p>	<p>0 annuelle exprimée en pourcentage</p> <p>1 trimestrielle exprimée en pourcentage</p> <p>2 mensuelle exprimée en pourcentage</p> <p>3 annuelle exprimée en indice 1985 = 100</p> <p>4 trimestrielle exprimée en indice 1985 = 100</p> <p>5 mensuelle exprimée en indice 1985 = 100</p> <p>6 annuelle exprimée en valeur absolue</p> <p>7 trimestrielle exprimée en valeur absolue</p> <p>8 mensuelle exprimée en valeur absolue</p> <p>9 pondération EUR 10 = 100 ou EUR 12 = 100 (inexistant pour les tableaux par pays)</p>

Exemple de consultation:

- 1) *tableau par variable*: pour connaître le chômage mensuel (chiffres absolus) de la RF d'Allemagne, tel qu'il figure au tableau 0304 de cette publication, il suffit d'appeler le code 12 93 0304 8;
- 2) *tableau par pays*: pour connaître l'indice des prix 1980 = 100 de la France tel qu'il figure au tableau «France» de cette publication, il suffit d'appeler le code 14 93 0031 3 (annuel), 14 93 0031 5 (mensuel).
