Mit der monatlich erscheinenden Veröffentlichung „Eurostatistik“ – Daten zur Konjunkturanalyse werden innerhalb kürzester Frist die neuesten statistischen Daten über die Europäische Gemeinschaft als Ganzes (EUR 12), über jedes Mitgliedsland sowie über die Vereinigten Staaten und Japan bekanntgegeben.

„Eurostatistik“ enthält nicht die Gesamtheit des bei Eurostat verfügbaren statistischen Materials, sondern eine Auswahl der relevantesten Reihen über die konjunkturelle Entwicklung.

Die Reihen werden jeweils für die letzten 15 Monate, die letzten fünf Quartale und die letzten vier Jahre veröffentlicht, um eine kurz- oder mittelfristige Analyse – gegebenenfalls mit überarbeiteten Zahlen – zu ermöglichen.

Schnelligkeit und Pünktlichkeit sind die wichtigsten Vorzüge dieser Veröffentlichung. Aus diesem Grunde wurde sie im Umfang bewußt klein gehalten und enthält keine Anmerkungen zur Methodik, die im übrigen in den spezialisierten Veröffentlichungen von Eurostat zu finden sind.

„Eurostatistik“ besteht aus drei Teilen:

- Die Rubrik „kurz notiert“ gibt die wichtigsten Ereignisse und Entwicklungen der jüngsten Zeit im wirtschaftlichen, finanziellen und sozialen Bereich wieder.
- Im Schaubilderteil werden die wichtigsten Reihen über die wirtschaftliche Entwicklung in der Gemeinschaft, den Mitgliedstaaten, den Vereinigten Staaten und Japan veranschaulicht.
- Im Konjunkturdatenteil werden die Daten, die von Eurostat auf der Grundlage gemeinsamer Kriterien harmonisiert wurden, für sämtliche Mitgliedstaaten dargestellt und mit den Daten der Vereinigten Staaten und Japans verglichen.

Die in „Eurostatistik“ veröffentlichten Daten stammen aus dem „ICG“-Bereich der On-line-Datenbank „Cronos“ von Eurostat.

Wer Zugang zu Cronos besitzt, kann jederzeit die Tabellen dieser Veröffentlichung abfragen, wobei die Daten täglich auf den neuesten Stand gebracht werden. Hinweise zur „on-line“-Benutzung finden sich auf der letzten Seite.

Weitere Informationen über „Eurostatistik“ können bei folgender Stelle angefordert werden:

WECHSELKURSE: Neuer Tiefstand des US-Dollar gegenüber der D-Mark

Der Dollar fiel am Freitag, den 21. August und am Montag, den 24. August gegenüber der D-Mark auf ein Nachkriegsrekordtief: Er schloß in London bei 1,437 DM bzw. bei 1,402 DM, obgleich die Notenbanken mehrfach mit Stützungskäufen intervenierten. Sein letztes Tief hatte der Dollar im Februar 1991 mit 1,443 DM verzeichnet.

Anfang Juli stand der Dollar noch bei 1,517 DM, in den folgenden Wochen verlor er dann trotz zweier Notenbankinterventionen (20. Juli und 11. August) beständig an Wert. Der jüngsten Beschleunigung seines Kursverfalls war seit Ende April ein kontinuierlicher Wertverlust vorausgegangen, bedingt durch die Besorgnis wegen der anhaltenden Rezession der amerikanischen Wirtschaft, die politische Ungewißheit im Hinblick auf den Ausgang der Präsidentschaftswahlen im November und das starke Gefälle zwischen den amerikanischen und den deutschen Zinssätzen, das derzeit bei nahezu 6 % liegt.

Dieses Gefälle vergrößerte sich im Laufe des Sommers zweimal: Am 2. Juli setzte die amerikanische Notenbank den US-Diskontsatz um 0,5 % auf 3 % herab, seinen niedrigsten Stand seit 1963, und am 16. Juli beschloß der Zentralbankrat der Deutschen Bundesbank eine Anhebung des deutschen Diskontsatzes um 0,75 % auf 8,75 %, wobei es jedoch keine Anhebung des Lombardsatzes gab, der bereits bei 9,75 % stand. Die Finanzmärkte reagierten mit deutlicher Erleichterung darauf, daß der Lombardsatz unverändert blieb.

Die Maßnahme der Bundesbank führte zu einer unmittelbaren Reaktion der Zentralbanken von Österreich, Italien, Belgien und Spanien. Die Banca d'Italia hob ihren Diskontsatz um 0,75 % auf 13,75 % und ihren Interventionssatz entsprechend auf 15,25 % an. Dies war seit Anfang Juli bereits das zweite Mal, daß der Diskontsatz erhöht wurde: Am 3. Juli war er wegen der Schwäche der Lira im Wechselkursmechanismus des EWS um 1 % auf 13 % heraufgesetzt worden. Später (4. August) konnte die Banca d'Italia dann zwar beide Zinssätze um 0,5 % zurücknehmen, als die Lira aber im Zuge der extremen Dollarschwäche am 24. August erneut unter Druck geriet, verlor sie gegenüber der DM an Wert und näherte sich ihrem unteren Interventionspunkt.

Nachdem die belgische Zentralbank ihren Interventionssatz am 16. Juli im Anschluß an die deutsche Zinserhöhung um 0,15 % auf 9,45 % heraufgesetzt hatte, erhöhte sie den gleichen Satz einen Monat später erneut, diesmal auf 9,6 %. Mit dieser Maßnahme sollte der Abstand zwischen den belgischen und den deutschen kurzfristigen Zinssätzen verringert werden.

Andere EG-Notenbanken konnten eine Anhebung ihrer Zinssätze umgehen, einige Währungen mußten indessen Werteinbußen hinnehmen. Das Pfund Sterling zeigt schon seit längerem eine Schwäche gegenüber der D-Mark: Zwischen Ende Juni und dem 21. August verlor es 3,6 % seines Wertes, und am 21. August schloß es bei nur knapp 2 Pfennig über seiner unteren EWS-Bandbreite. Vor dem Hintergrund der Sorgen hinsichtlich des Umfangs und der Dauer der Rezession im Vereinigten Königreich erreichte die Abweichung des Pfundkurs vom zentralen ECU-Kurs am selben Tag 76 %.

Innerhalb des Wechselkursmechanismus fiel der portugiesische Escudo vom ersten auf den fünften Platz zurück, nachdem die Banco de Portugal ihren Interventionssatz (den Zinssatz für Ausleihungen an die Geschäftsbanken) am 19. August um 1 % auf 16 % gekürzt hat. Diesem Schritt war die Ankündigung vorausgegangen, daß alle noch bestehenden Kapitalverkehrskontrollen noch vor Ende 1992 abgeschafft würden. Die Peseta hat nunmehr (22. August) die stärkste Position im Paritätenraster inne, gefolgt vom Belgischen Franc, der D-Mark und dem Holländischen Gulden.

In Japan sind die Aktienkurse weiter gefallen: Am 18. August schloß der Nikkei-Index um 4,2 % niedriger bei 14 309, dem niedrigsten Stand seit sechs Jahren, obgleich sich der Aktienmarkt in den darauffolgenden Tagen wieder etwas erholte. Die Schwäche der japanischen Aktienkurse in Verbindung mit anderen Sorgen um die japanische Wirtschaft führte dazu, daß die Schwäche des US-Dollar gegenüber dem Yen weniger ausgeprägt war als gegenüber anderen Währungen.

RENDITEN VON STAATSANLEIHEN: Anstieg der Renditen in Dänemark, Spanien, Frankreich und Italien

Seit dem dänischen Votum zum Vertrag über die Europäische Union Anfang Juni sind die Renditen von Staatsanleihen in Dänemark um 0,8 %, in Spanien um 1,1 %, in Frankreich um 0,6 % und in Italien ebenfalls um 0,6 % gestiegen. In diesem Ansteigen spiegelt sich die zunehmende Unsicherheit hinsichtlich der künftigen Entwicklung sowohl der Renditen von Staatsanleihen als auch der Inflation in einigen EG-Mitgliedstaaten wieder.

Auch in Japan gingen die Renditen von Staatsanleihen im Juli nach einem Rückgang im Juni wieder nach oben: Die Rendite stieg von 5,1 % im Juni auf 5,7 % im Juli. Nachdem jedoch der japanische Diskontsatz am 27. Juli von 3,75 % auf 3,25 % herabgesetzt wurde, könnten die Anleiherenditen im August rückläufig sein, insbesondere, da die japanischen Kapitalanleger angesichts der Schwäche des Aktienmarktes von Aktien auf Anleihen überzuwechseln scheinen.

Die realen (inflationbereinigten) Renditen von Staatsanleihen sind der folgenden Tabelle zu entnehmen:

Reale langfristige Zinssätze (Monatsdurchschnitte)

	12/91	03/92	06/92
Belgien	6,2	6,1	6,3
Dänemark	6,5	6,1	6,7
Deutschland	4,3	3,3	4,0
Spanien	6,3	4,5	5,5
Frankreich	6,1	5,9	6,2
Italien	4,8	6,2	6,6
Luxemburg	5,5	4,7	4,3
Niederlande	3,9	4,1	4,4
Portugal	4,7	4,0	2,1
Vereinigtes Königreich	5,1	5,5	5,1
USA	4,5	4,7	4,6
Japan	2,8	3,3	2,8

Der ungewogene Durchschnitt der realen Anleiherenditen in der EG hat sich in den vergangenen sechs Monaten von 5,3 % im Dezember 1991 auf 5,1 % im Juni 1992 verringert. Dahinter verbergen sich jedoch kontrastierende Entwicklungen in den einzelnen EG-Ländern. So sind die realen Renditen in Italien und in den Niederlanden gestiegen, in Luxemburg und in Portugal hingegen zurückgegangen. Am höchsten sind sie in Dänemark

(6,7 %), wo relativ hohe nominale Renditen mit einer niedrigen Inflationsrate einhergehen. Portugal hat gegenwärtig mit 2,1 % die niedrigsten realen Renditen, die Ende 1991 noch bei 4,7 % gelegen hatten; in diesem Zeitraum war ein Rückgang der nominalen Renditen sowie in jüngster Zeit ein Anziehen der Inflation zu verzeichnen.

GELDVOLUMEN: ALP-Wachstum in Spanien unterhalb des Zielkorridors für 1992

Die auf das Jahr umgerechnete Zuwachsrate der Geldmenge ALP (liquide Mittel von Nichtbanken) betrug im Mai 6,4 % und lag somit zum vierten Mal in Folge unterhalb des für 1992 festgelegten Zielkorridors von 8-11 %.

Auch in anderen Volkswirtschaften verläuft das Geldmengenwachstum weiterhin sehr langsam. In den Vereinigten Staaten betrug das M2-Wachstum in dem Jahr bis Mai 3,3 % und lag somit höher als in den vorangegangenen beiden Monaten, jedoch noch immer an der unteren Grenze des von der amerikanischen Notenbank anvisierten Zielkorridors von 2,5-3,5 %. In Japan ist kaum eine Zunahme der Geldmenge M2 erkennbar, die in den zwölf Monaten bis April um knapp 1,6 % angestiegen ist, und die M4-Zuwachsrate im Vereinigten Königreich liegt noch immer auf einem im historischen Vergleich niedrigen Niveau. In Frankreich war das M2-Wachstum im Mai zum neunten Mal hintereinander negativ, während für M3 ein stärkeres Wachstum zu verzeichnen ist; dieses Aggregat liegt weiterhin innerhalb des von der Banque de France für 1992 festgelegten Zielkorridors von 4-6 %.

In Griechenland war dagegen in den vergangenen vier Monaten eine erhebliche Beschleunigung des M3-Wachstums zu beobachten: Der auf Jahresbasis umgerechnete Anstieg der Geldmenge M3 betrug im Juni 17,1 %, gegenüber 11,6 % im März, und lag somit oberhalb des Zielkorridors von 9-12 %, den die Bank von Griechenland gesetzt hat. Einen Tiefstand hatte das Geldmengenwachstum in Griechenland im November 1991 erreicht, als der auf das Jahr umgerechnete Wert für M3 bei nur knapp 6,3 % lag. Auch in Deutschland übersteigt das M3-Wachstum weiterhin den von der Bundesbank für 1992 festgelegten Zielkorridor von 3,5-5,5 %: Im Mai betrug die jährliche Zuwachsrate 8,3 %.

AMTLICHE WÄHRUNGSRESERVEN: Starker Abfluß von Währungsreserven aus Italien

Italien verzeichnete im Juni einen Abfluß von mehr als 5 Milliarden ECU, dies entspricht 16 % seiner Gesamtreserven. Hieran läßt sich der Umfang der Intervention durch die Banca d'Italia ablesen, als die Lira in der Zeit nach dem dänischen 'Nein' zum Vertrag von Maastricht an den Devisenmärkten unter Druck geraten war. Die italienischen Währungsreserven sind somit seit Anfang 1992 um nahezu 30 % zurückgegangen.

Die Reserven aller EG-Mitgliedstaaten mit Ausnahme von Spanien und Portugal haben sich im Juni verringert. Dieser Rückgang ist teilweise durch den Kursverlust des US-Dollar gegenüber dem Ecu im Juni bedingt: Da ein Großteil der Währungsreserven der Länder auf Dollarbestände entfällt, kann sich eine Verringerung des Außenwertes des Dollar in einer Änderung des in Ecu ausgedrückten Umfangs der Währungsreserven eines Landes auswirken.

Spanien und Portugal, die Länder mit den derzeit stärksten Währungen innerhalb des Wechselkursmechanismus, verzeichneten im Juni Zuflüsse von Währungsreserven in Höhe von 0,2 % bzw. 4,1 %. Nach dem Beitritt des Escudo zum Wechselkursmechanismus sind in Portugal weiterhin verstärkte Reservenzuflüsse zu beobachten: Ende Juni entfielen rund 7,3 % der Gesamtreserven von EUR12 auf Portugal, gegenüber 6,5 % Ende 1991.

Taiwan hat bekanntgegeben, daß seine amtlichen Währungsreserven Ende Juni 1992 die Rekordhöhe von 86,6 Milliarden Dollar (64 Milliarden ECU) erreicht haben. Die Reserven setzen sich zusammen aus Beständen an ausländischen Staatspapieren und Fremdwährungen einlagen.

VIERTELJÄHRLICHE GESAMTRECHNUNGEN: Erstes Quartal 1992: Leichter wirtschaftlicher Aufschwung in der Gemeinschaft (BIP +0,8 %) bei einem deutlichen Rückgang der Inflation (+0,7 %).

Nach einem Quartal der Stagnation war die Wirtschaft der Gemeinschaft insgesamt im ersten Quartal 1992 durch eine leichte Zunahme der Produktion (BIP +0,8 %) gekennzeichnet. Allerdings ist bei der Interpretation dieser Entwicklung große Vorsicht geboten. So scheint einiges darauf hinzudeuten, daß die Phase der Unsicherheit für die Weltwirtschaft in Wirklichkeit weiterhin anhält. Diese Unsicherheit ist im wesentlichen auf drei Ursachen zurückzuführen. Zunächst einmal scheinen die Interessen der führenden Industrieländer, wie sich bei dem letzten G7-Treffen zeigte, erstmals seit Jahren nicht auf ein gemeinsames Ziel ausgerichtet zu sein. Außerdem kommt es durch die Verzögerung der Arbeiten des GATT zu einer Stagnation des internationalen Handels, der ein ganz wesentlicher Faktor des wirtschaftlichen Aufschwungs ist. Schließlich üben die Investoren angesichts der Schwierigkeiten auf den Finanz- und in jüngster Zeit den Devisenmärkten eher Zurückhaltung und warten die weitere Entwicklung ab.

Bei der anhand des impliziten BIP-Deflators gemessenen Preisentwicklung ist ein merklicher Rückgang sowohl der vierteljährlichen als auch der jährlichen Inflationsrate (+0,7 % bzw. +4,3 %) festzustellen. Dieses Ergebnis bestätigt die Richtigkeit einer in den meisten Mitgliedstaaten eingeleiteten restriktiven Geldpolitik, die durch eine erneute Anhebung der Zinssätze im Juli gekennzeichnet war.

Charakteristisch für die Entwicklung der Bestandteile des BIP ist in diesem Quartal eine Zunahme der Investitionstätigkeit (+0,9 %), die im vorangegangenen Quartal rückläufig gewesen war. Privater und Staatsverbrauch dagegen sind zu einem Stillstand gekommen (+0,1 % bzw. -0,1 %).

Was die Situation in den Mitgliedstaaten angeht, so ist generell – außer im Vereinigten Königreich, wo sich die rückläufige Entwicklung des vorangegangenen Quartals fortsetzte – ein Anstieg der Produktion zu erkennen, der in der Bundesrepublik Deutschland und Frankreich besonders ausgeprägt war (+1,5 % bzw. +1,0 %). Bei den Inflationsraten ist überall mit Ausnahme des Vereinigten Königreichs und Dänemarks, die einen Anstieg (+1,2 % bzw. +0,7 %) zu verzeichnen hatten, ein Rückgang festzustellen. Die markanteste Entwicklung auf der Nachfrageseite ist im Vereinigten Königreich zu beobachten, wo sich die Investitionstätigkeit nach einer sieben Quartale anhaltenden Abschwächung erstmals neu belebte (+1,4 %). In den übrigen Mitgliedstaaten sieht die Entwicklung der Investitionstätigkeit im allgemeinen recht positiv aus. Nur Italien und Dänemark haben eine rückläufige Tendenz zu verzeichnen (-0,5 % bzw. -2,8 %).

Die entsprechenden Schätzungen für das zweite Quartal 1992 lassen in den Vereinigten Staaten eine Verlangsamung des Wirtschaftswachstums (+0,3 %) sowie einen Rückgang sowohl der vierteljährlichen als auch der jährlichen Inflationsraten (+0,6 % bzw. +2,6 %) erkennen. Bei den Komponenten der Inlandsnachfrage ist eine beträchtliche Zunahme der Investitionen (+2,9 %) zu beobachten, während die Entwicklung des Verbrauchs, und zwar sowohl des privaten als auch des Staatsverbrauchs, zu einem Stillstand gekommen ist (-0,1 % bzw. +0,1 %).

In Japan war die wirtschaftliche Entwicklung im ersten Quartal 1992 durch einen merklichen Anstieg des BIP (+1,1 %) bei einer gleichzeitigen Stagnation der Preise (+0,0 %) und einem leichten Rückgang der jährlichen Inflationsrate (+1,7 %) gekennzeichnet. Bei den Komponenten der Nachfrage ist eine beträchtliche Steigerung sowohl des privaten als auch des Staatsverbrauchs (+0,8 % bzw. +1,1 %) festzustellen, während sich die Investitionstätigkeit nur schwach entwickelte (+0,1 %).

PREISE: Jährliche Inflationsrate für die Gemeinschaft im Juni auf 4,5 % zurückgegangen

Die auf die letzten 12 Monate bezogene Inflationsrate für die Gemeinschaft insgesamt ist zwischen Mai und Juni von 4,8 % auf 4,5 % zurückgegangen. Das ist der niedrigste Wert seit Oktober 1991. In fast allen Mitgliedstaaten zeigte die Inflation rückläufige Tendenz. Ein mäßiger bis schwacher Anstieg war in Portugal (0,4 %), Belgien (0,3 %), Italien (0,3 %), Deutschland (0,2 %), Luxemburg (0,2 %) und Frankreich (0,1 %) zu verzeichnen. Gleichzeitig blieb der Verbraucherpreisindex in Dänemark, Spanien und dem Vereinigten Königreich zwischen Mai und Juni unverändert, während er in den Niederlanden um 0,2 % zurückging.

Die einzige Ausnahme bildete Griechenland (+1,7 %), wo zwischen Mai und Juni starke Preiserhöhungen bei Lebensmitteln, bei Bekleidung und im Freizeitbereich registriert wurden.

Der vierteljährliche Index für Irland ist zwischen Mitte Februar und Mitte Mai um 0,7 % gestiegen, das entspricht einem durchschnittlichen monatlichen Anstieg um ca. 0,2 %.

Die jährlichen Inflationsraten der einzelnen Mitgliedstaaten sind weiterhin sehr unterschiedlich; so liegt die auf die letzten 12 Monate bezogene Inflationsrate Griechenlands, wie aus der nachstehenden Tabelle zu ersehen ist, mehr als dreimal so hoch wie der Gemeinschaftsdurchschnitt und mehr als sechsmal so hoch wie die Inflationsrate Dänemarks.

	Juni 92	Juni 91	Juni 92	Juni 91	
	Juni 91	Juni 90	Juni 91	Juni 90	
Dänemark	2.3 %	2.9 %	Niederlande	4.0 %	3.6 %
Belgien	2.6 %	3.6 %	Deutschland**	4.3 %	3.5 %
Frankreich	3.0 %	3.3 %	Italien***	5.4 %	6.6 %
Irland*	3.6 %	3.1 %	Spanien	6.2 %	6.2 %
Luxemburg	3.6 %	3.3 %	Portugal	9.4 %	11.6 %
Vereinigtes Königreich	3.9 %	5.8 %	Griechenland	15.1 %	18.9 %

Die entsprechenden Inflationsraten für die USA und Japan liegen bei 3,1 % bzw. 2,3 %, die für Kanada bei 1,1 % (niedrigste Inflationsrate seit mehr als 20 Jahren).

* Irland: Mai 1992 im Vergleich zu Mai 1991, Mai 1991 im Vergleich zu Mai 1990.

** Der Verbraucherpreisindex für die Bundesrepublik Deutschland bezieht sich weiterhin auf den Gebietsstand vor dem 3. Oktober 1990.

*** Ab Februar 1992 gehen die Tabakpreise nicht mehr in die Berechnung des italienischen Index ein.

INDUSTRIELLE PRODUKTION: Erholung der Industriekonjunktur läßt auf sich warten

Betrachtet man für die Industrieproduktion der Europäischen Gemeinschaft (EUR 12) die neuesten Daten von Mai 1992, so sind die Hoffnungen des Vormonats auf eine leichte Erholung wieder verfliegen. Alle Güterbereiche stagnierten. Der arbeitstäglich bereinigte Produktionsindex der Industrie belief sich im Mai für die Europäische Gemeinschaft auf 114,3 (1985=100). Dies entspricht einer Wachstumsrate des Index gegenüber dem Maiwert von 1991 von 0,2 %. Nach Saisonbereinigung beträgt der Index für Mai 114,1. Verglichen mit dem kumulierten Wert der Monate Dezember, Januar und Februar veränderte sich die Produktion in der EG (saisonbereinigt) in den letzten drei verfügbaren Monaten (März, April, Mai) um -0,1 %. Während die Auftragsgänge der EG (geschätzt) im Februar/März noch um 6 % gegenüber dem Vorjahreswert stiegen, betrug die entsprechende Wachstumsrate im April/Mai nur noch 1 %.

Für die einzelnen Mitgliedstaaten der EG betragen (soweit verfügbar) die Wachstumsraten: Irland 3,5 % (geschätzt), Italien 1,4 %, Niederlande 1,0 % (geschätzt), Deutschland (West) 0,5 %, Dänemark 0,2 %, Vereinigtes Königreich -0,3 %, Frankreich -0,7 %, Spanien -0,9 %, Griechenland -2,2 %. Die Erholung der Industrieproduktion ist somit noch nicht eingetreten.

In den USA steigt die Industrieproduktion mit einer Rate von 1,1 % (Veränderungsrate der letzten 3 Monate gegenüber den Vormonaten); in Japan setzt sich mit der Veränderungsrate von -2 % der Abschwung der Industrieproduktion fort.

Aufgeteilt nach Güterarten betragen die Wachstumsraten der EG: Grundstoff- und Produktionsgüterindustrie: 0,0 % (USA 0,5 %), Investitionsgüterindustrie: 0,0 % (USA 1,2 %), Konsumgüterindustrie: -0,1 % (USA 1,1 %).

Demnach ist in den USA eine leichte Erholung beobachtbar, in der EG herrscht in allen Güterbereichen Stagnation, während sich in Japan die Rezession fortsetzt.

ZAHLUNGSBILANZ

Gesamt Tendenzen – vorläufige Zahlen für 1991: Verschlechterung der Leistungsbilanz der Gemeinschaft um 35 Mrd. ECU, das Leistungsbilanzdefizit beläuft sich damit auf -46,5 Mrd. ECU. Die amerikanische Leistungsbilanz ist nahezu ausgeglichen, sie hat sich um fast 64 Mrd. ECU auf -8,4 Mrd. ECU verbessert. Der japanische Leistungsbilanzüberschuß erhöht sich um 31 Mrd. ECU auf nahezu 60 Mrd. ECU.

In den Zahlungsbilanzen der Gemeinschaft, der USA und Japans haben sich 1991 tiefgreifende Änderungen vollzogen. Das Leistungsbilanzdefizit der Gemeinschaft liegt

bei -46,5 Mrd. ECU, nach einem Defizit von 11,1 Mrd. ECU im Jahr 1990. Der amerikanische Saldo beläuft sich auf -8,4 Mrd. ECU (-10,4 Mrd. Dollar) nach -72 Mrd. ECU (-91,7 Mrd. Dollar) im Vorjahr; in Japan wird ein Leistungsbilanzüberschuß von 59,4 Mrd. ECU (9 890 Mrd. Yen) nach 28,4 Mrd. ECU (5 216 Mrd. Yen) verzeichnet.

Ein Teil dieser Kapitalbewegungen ist auf Übertragungen in Zusammenhang mit dem Golfkrieg zurückzuführen. Der Saldo der amerikanischen Übertragungsbilanz erhöhte sich um 34 Mrd. ECU, in Japan ging dieser Saldo um 6,7 Mrd. ECU zurück. In der Gemeinschaft haben sich diese Zahlungen zum Teil ausgeglichen und der Übertragungsbilanzsaldo verschlechterte sich um fast 4 Mrd. ECU.

Die größeren Veränderungen wurden allerdings auf der Ebene der Handelsbilanz verzeichnet. 1991 hat sich der Handelsbilanzüberschuß Deutschlands um 38,5 Mrd. ECU verringert; ein Teil dieser Summe floß zwar anderen EG-Mitgliedstaaten zu, insgesamt hat sich die gemeinschaftliche Handelsbilanz aber um 27 Mrd. ECU verschlechtert und beläuft sich nunmehr auf -28,6 Mrd. ECU. Die amerikanische Handelsbilanz hat sich hingegen um 24,8 Mrd. ECU auf nunmehr -59,8 Mrd. ECU (-74,1 Mrd. Dollar) verbessert. Der japanische Handelsbilanzüberschuß stieg um 33,8 Mrd. ECU auf 83,6 Mrd. ECU (13 919 Mrd. Yen).

Das Defizit der gemeinschaftlichen Dienstleistungs- und Übertragungsbilanz hat sich um 8,3 Mrd. ECU auf -17,9 Mrd. ECU verschlechtert. In den USA erhöhte sich der Saldo der Dienstleistungs- und Übertragungsbilanz um 38,9 Mrd. ECU auf 51,4 Mrd. ECU (63,7 Mrd. Dollar). In Japan verringerte sich der Saldo geringfügig und beläuft sich nunmehr auf -24,1 Mrd. ECU (4 012 Mrd. Yen).

Auch in den Leistungsbilanzen der Mitgliedstaaten haben sich 1991 erhebliche Änderungen vollzogen. Die deutsche Leistungsbilanz weist – nach einem Überschuß von 37,1 Mrd. ECU im Jahr 1990 – ein Defizit in Höhe von 16 Mrd. ECU auf und ist damit zum ersten Mal seit 1981 negativ. Die Handelsbilanz weist nach wie vor einen Überschuß auf (18,7 Mrd. ECU), im Vergleich zu 1990 hat sich dieser Überschuß allerdings um 38,5 Mrd. ECU verringert. Im Vereinigten Königreich hat sich die Leistungsbilanz im Jahr 1991 kräftig erholt: der Saldo betrug 1990 -21,4 Mrd. ECU, 1991 -6,3 Mrd. ECU. Das Handelsbilanzdefizit hat sich um 11,5 Mrd. ECU verringert und liegt nunmehr bei -14,5 Mrd. ECU. Der Überschuß der Dienstleistungs- und Übertragungsbilanz hat sich dank des starken Abbaus des Übertragungsbilanzdefizits praktisch verdoppelt (auf 8,2 Mrd. ECU).

In Frankreich konnte das Leistungsbilanzdefizit kräftig abgebaut werden, es beläuft sich auf -5,2 Mrd. ECU nach -11,9 Mrd. ECU im Jahr 1990. Das Handelsbilanzdefizit hat sich um 2,6 Mrd. ECU verringert, der Saldo der Kapitalübertragungen fiel sehr viel günstiger aus als 1990.

In Italien hat sich das Leistungsbilanzdefizit erheblich ausgeweitet (von -11,6 Mrd. ECU im Jahr 1990 auf -17,1 Mrd. ECU). Die Handelsbilanz ist – nach einem geringen Überschuß im Vorjahr – leicht defizitär. Diese Verschlechterung ist im wesentlichen auf das Defizit der Dienstleistungs- und Übertragungsbilanz, das sich auf -16,5 Mrd. ECU beläuft, und insbesondere auf die Posten Kapitalerträge und Übertragungen zurückzuführen. In Spanien und Dänemark haben sich die Leistungsbilanzen leicht verbessert, in den Niederlanden und Portugal hingegen geringfügig verschlechtert.

AUSSENHANDEL

Im März 1992 belief sich das Außenhandelsdefizit der Gemeinschaft auf 5,7 Mrd. ECU, es hat sich damit gegenüber März 1991 um fast 1 Mrd. ECU verschlechtert. Die Situation im Vergleichsmonat des Vorjahres war allerdings vom Golfkrieg geprägt: Insgesamt gesehen ging das Handelsaufkommen zurück, wobei die Ausfuhren stärker abnahmen als die Einfuhren. In den meisten Mitgliedstaaten haben sich die Außenhandelsbilanzen im Vergleich zu März 1991 verschlechtert. Am stärksten betroffen waren Spanien (-0,4 Mrd. ECU), Deutschland (-0,3 Mrd. ECU) und Italien (-0,3 Mrd. ECU). In Griechenland hingegen konnte im Vergleich zu März 1991 eine leichte Verbesserung des Handelsbilanzsaldos (+0,1 Mrd. ECU) verzeichnet werden, auch in Frankreich verbesserte sich die Außenhandelsbilanz um 0,4 Mrd. ECU: sie war im März 1992 nahezu ausgeglichen.

Die Ausfuhren haben fast im gleichen Umfang zugenommen wie die Einfuhren (+11,4 % bzw. +12,3 % gegenüber März 1991), wobei hier allerdings als Vergleichsgrundlage die Situation im März 1991 diente, einem Monat, in dem die Ausfuhren sehr viel stärker zurückgegangen waren als die Einfuhren. Läßt man den Nachholeffekt in Zusammenhang mit dem Golfkrieg außer acht, so ist der Anstieg der Ausfuhren als schwach zu bezeichnen, die Einfuhren sind hingegen deutlich gestiegen.

Der Preis für Rohölierfahrungen in die EG hat zwischen März 1991 und März 1992 nicht zur Verschlechterung des Außenhandelsaldos beigetragen. In dem genannten Zeitraum sank der Preis für ein Barrel Rohöl von 18,6 auf 16,8 Dollar.

Das Defizit der amerikanischen Außenhandelsbilanz betrug im März 1992 4,2 Mrd. ECU (gegenüber 2,6 Mrd. ECU im März 1991). Die Einfuhren erhöhten sich, in ECU ausgedrückt, zwischen März 1991 und März 1992 um 19,5 % (nahezu 15 % in Dollar). Im Vergleich zum Vorjahresmonat sind auch die Ausfuhren deutlich gestiegen: um 15,5 % in ECU bzw. 11 % in Dollar. Diese hohen Anstiegsraten sind auf die spezifische Situation im Vergleichsmonat des Vorjahres zurückzuführen, in dem die amerikanischen Einfuhren sehr viel stärker zurückgingen als die Ausfuhren.

Die japanische Handelsbilanz wies mit 7,4 Mrd. ECU wiederum einen hohen Überschuß auf, der geringfügig über dem von März 1991 lag. Die japanischen Ausfuhren erhöhten sich um fast 10 % in ECU, das entspricht 6 % in Dollar und 2 % in Yen. Die Einfuhren stiegen um 14 % in ECU und liegen nunmehr wieder auf dem Niveau von März 1990. In Dollar ausgedrückt belief sich der Anstieg auf 10 %, in Yen auf etwas mehr als 6 %.

Im März 1992 wies Deutschland mit 2,3 Mrd. ECU den höchsten Handelsbilanzsaldo der Mitgliedstaaten auf (Vorjahresmonat: 1 Mrd. ECU). Dieser Anstieg ist auf die besseren Ergebnisse im innergemeinschaftlichen Handel zurückzuführen. Auch in Irland und Dänemark wurden leichte Handelsbilanzüberschüsse (0,3 bzw. 0,2 Mrd. ECU) verzeichnet. In den Niederlanden war die Handelsbilanz ausgeglichen. Aus Griechenland und Portugal wurden Defizite von nahezu 1 Mrd. ECU (0,7 bzw. 0,9 Mrd. ECU) gemeldet. Das portugiesische Defizit ist im Vergleich zu März 1991 aufgrund der schlechteren Ergebnisse im innergemeinschaftlichen Handel um eine halbe Milliarde ECU gestiegen. Das gleiche gilt für die BLWU; das Defizit hat sich dort – verglichen mit dem Vorjahresmonat – um 0,3 Mrd. ECU auf 1,2 Mrd. ECU ausgeweitet. In Italien belief sich das Handelsbilanzdefizit auf 1,6 Mrd. ECU, im Vereinigten Königreich und in Spanien auf über 2 Mrd. ECU (2,2 bzw. 2,4 Mrd. ECU). Gegenüber März 1991 haben sich die inner- und außergemeinschaftlichen Handelsbilanzen Spaniens verschlechtert, so daß sich das Gesamtdefizit um fast 1 Mrd. ECU erhöhte.

Der innergemeinschaftliche Handel nahm zwischen März 1991 und März 1992 um 10,8 % und damit weniger stark zu als die Einfuhren aus Drittländern (12,3 %).

Eurostatistics – data for short-term economic analysis – is a monthly publication aimed at providing, as rapidly as possible, the latest statistical data on the European Community as a whole (EUR 12), each Member State, the United States and Japan.

Eurostatistics does not present all the statistics held by Eurostat, but a selection of the most relevant series on the economic situation.

The series are published for the last 15 months, the last five quarters and the last four years, thus permitting short- or medium-term analysis with figures that may have been revised where necessary.

Speed of publication and punctuality are the main features of this publication; that is why it is deliberately streamlined and does not contain any methodological notes, which are given in Eurostat's specialized publications.

Eurostatistics comprises three sections:

- The 'In brief' section outlines the main recent events and trends in the economic, financial and social fields.
- The 'Graphs' section illustrates the most significant economic series for the Community, its Member States, the United States and Japan.
- The 'Short-term trends' section presents data harmonized by Eurostat on the basis of common criteria for the Member States as a whole, with comparisons with the USA and Japan.

The data published in *Eurostatistics* are taken from the ICG domain of Eurostat's on-line data bank, Cronos.

By linking up to Cronos it is possible to obtain daily the tables presented in this publication, containing data updated daily. The method of consultation can be found at the end of this publication.

Further information about *Eurostatistics* can be obtained from the following address:

Eurostat – Directorate A

Unless otherwise stated, data for the Federal Republic of Germany, including West Berlin, as constituted prior to 3 October 1990.

EXCHANGE RATES: US dollar falls to new lows against the Deutschemark

The dollar fell to post-1945 lows against the Deutschemark on Friday August 21 and Monday August 24, closing in London at DM 1.437 and DM 1.402 respectively, despite repeated central bank intervention aimed at stabilising its value. Its previous low of DM 1.443 occurred in February 1991.

At the start of July the dollar stood at DM1. 517, and then depreciated steadily in the following weeks, despite central bank intervention on two previous occasions (July 20 and August 11). The recent acceleration in the fall in its external value has come after the steady depreciation which has been taking place since the end of April, due to fears about the continuing recession in the American economy, the political uncertainty surrounding the results of the US election in November and the large differential between US and German interest rates, which is currently almost 6%.

This differential increased twice over the summer: on 2 July the Federal Reserve decreased the US discount rate by 0.5% to 3%, its lowest level since 1963, and on July 16 the Bundesbank Council decided that there should be an increase in the German discount rate of 0.75% to 8.75%, although there was no increase in the Lombard rate, which already stood at 9.75%. There was some relief in financial markets that the Lombard rate was left unchanged.

This move from the Bundesbank led to an immediate response from the central banks of Austria, Italy, Belgium and Spain. The Banca d'Italia increased its discount rate by 0.75% to 13.75% and its intervention rate by the same margin to 15.25%. This was the second time since the beginning of July that the discount rate had been increased; on July 3 it was increased by 1% to 13% following weakness of the lira in the exchange rate mechanism (ERM). The Banca d'Italia was later (August 4) able to decrease both rates by 0.5% however, although during the period of extreme dollar weakness on August 24 the lire again came under pressure and depreciated towards its lower DM limit.

Having increased its intervention rate by 0.15% to 9.45% on July 16 following the German increase, one month later the Belgian central bank again increased the same rate, this time to 9.6%. This move was intended to narrow the gap between Belgian and German short-term rates.

Other EC central banks were able to avoid increasing rates, although some currencies have depreciated. Sterling has been weakening steadily against the deutschemark: between the end of June and August 21 it lost 3.6% of its value, and on August 21 it closed less than 2 pfennigs above its lower limit. On the same day, it touched 76% of its permitted divergence against the ecu, amid worries as to the depth and length of the UK recession.

Elsewhere in the ERM, the Portuguese escudo slipped from the top of the grid to fifth place, after the Banco de Portugal cut its intervention rate (the rate at which it lends to commercial banks) by 1% to 16% on August 19. This reduction followed the announcement that all remaining capital controls would be removed before end of 1992. The peseta is now (August 22) at the top of the grid, followed by the Belgian franc, Deutschemark and Dutch guilder.

Japanese share prices have continued to fall: on August 18 the Nikkei average of leading stocks lost 4.2% to close at 14309, a six year low, although on subsequent days the stock market recovered slightly. The weakness of domestic share prices together with other worries about the Japanese economy have meant that US dollar weakness has not been as pronounced against the yen as it has against other currencies.

GOVERNMENT BOND YIELDS: Yields rise in Denmark, Spain, France and Italy

Since the Danish vote on the Treaty on European Union at the beginning of June, the yield on government bonds has risen by 0.8% in Denmark, by 1.1% in Spain, by 0.6% in France and by 0.6% in Italy. These increases reflect an heightening of uncertainty surrounding the future outlook for both the yield on government bonds and for inflation in some EC Member States.

Government bond yields also increased in Japan in July, after falling in June: the yield on central government bonds rose from 5.1% in June to 5.7% in July. However, the Japanese discount rate was reduced from 3.75 to 3.25% on July 27, and so bond yields in August may show a fall, particularly since Japanese investors seem to be switching from equities to bonds as a result of the weakness of the equity market.

The real (inflation adjusted) yield on government bonds can be seen in the following table:

Real Long term Interest Rates (monthly averages)

	12/91	03/92	06/92
Belgium	6.2	6.1	6.3
Denmark	6.5	6.1	6.7
Germany	4.3	3.3	4.0
Spain	6.3	4.5	5.5
France	6.1	5.9	6.2
Italy	4.8	6.2	6.6
Luxembourg	5.5	4.7	4.3
Netherlands	3.9	4.1	4.4
Portugal	4.7	4.0	2.1
UK	5.1	5.5	5.1
US	4.5	4.7	4.6
Japan	2.8	3.3	2.8

The simple average of real EC bond yields has fallen over the last 6 months, from 5.3% in December 1991 to 5.1% in June 1992. This however hides diverging trends among the EC economies. Real yields have increased in Italy and the Netherlands, and have fallen in Luxembourg and Portugal. They are highest in Denmark (6.7%), where relatively high nominal yields are combined with low inflation. Portugal currently has the lowest real yields (2.1%), down from 4.7% at the end of 1991; in this period there has been a fall in nominal yields together with a recent rise in inflation.

MONEY SUPPLY: ALP growth in Spain below 1992 target range

The annualised growth rate of ALP (liquid assets held by the public) was 6.4% in May, below its 1992 target range of 8-11% growth for the fourth successive month. Monetary growth remains very slow in other economies too. In the United States, M2 growth in the year to May was 3.3%, up on the previous 2 months but still at the bottom

end of the Federal Reserve's target range of 2.5-3.5%. In Japan, M2 is hardly growing, increasing by just 1.6% in the 12 months to April, and the growth rate of M4 in the UK remains at historically low levels. In France, M2 growth in May was negative for the ninth successive month, although there is stronger growth in M3; this aggregate remains within the Banque de France's target range for 1992 of 4-6%.

However, in Greece there has been a significant acceleration in the growth of M3 in the last 4 months; annualised M3 growth was 17.1% in June, up from 11.6% in March, and above the Bank of Greece's target range of 9-12%. Monetary growth in Greece was at a low in November 1991 when the annualised figure for M3 was just 6.3%. In Germany too, the growth of M3 remains above the Bundesbank's target range for 1992 of 3.5-5.5%; in May the year-on-year growth rate was 8.3%.

FOREIGN OFFICIAL RESERVES: Heavy outflow of reserves from Italy

Italy experienced an outflow of over 5 billion ecu in June, 16% of its total, which is an indication of the scale of intervention undertaken by the Banca d'Italia when the lire was under pressure in the foreign exchange markets in the period after the Danish 'no' vote to the Maastricht Treaty. Italy's reserves have now fallen by almost 30% since the beginning of 1992.

The reserves of all EC Member States with the exception of Spain and Portugal fell in June. Part of this fall can be accounted for by the fall in the US dollar against the ecu in June: since the dollar makes up a large part of the countries' foreign currency reserves, a fall in its external value can make a difference to the amount of a country's reserves when expressed in ecus.

Spain and Portugal, the countries with (at that point) the strongest ERM currencies, experienced inflows of reserves in June, of 0.2% and 4.1% respectively. The latter country continues to attract inflows following the escudo's entry into the ERM; Portugal accounted for approximately 7.3% of EUR12's reserves at the end of June as compared with 6.5% at the end of 1991.

Taiwan has announced that its foreign official reserves at the end of June 1992 were \$86.6 billion (64 billion ecu), a record high. The reserves are split between holdings of foreign government securities and foreign currency deposits.

QUARTERLY ACCOUNTS: The first quarter of 1992 was marked by a slight upturn in the Community economy (GDP +0.8%) and a substantial fall in inflation (+0.7%).

In the Community as a whole, the first three months of the year saw a slight rise in output (GDP up 0.8%), which had stagnated during the previous quarter. This upswing must, however, be interpreted with great caution: several factors would suggest that economic uncertainty is persisting worldwide, for three main reasons: firstly, the most highly-developed countries seem, for the first time in recent years, not to have set their sights on a common goal – viz. the last G7 meeting; secondly, the hold-ups in the work of the GATT have meant that international trade, one of the major vectors of improvements in the economy, has become bogged down; and finally, the difficulties on the financial and, more recently, the currency markets are proving to be a disincentive for investors, who prefer to hold back until the situation becomes clearer.

Prices as measured by the implicit GDP deflator show a clear fall in both quarterly and annual inflation (+0.7% and +4.3% respectively), which would seem to vindicate the restrictive monetary policies adopted by most Member States and reflected in July's fresh rise in interest rates.

As regards the components of GDP, the upturn in investment (+0.9%) stands out after the previous quarter's downturn. Both private and public consumption are marking time (+0.1% and -0.1% respectively).

Most of the Member States have seen an improvement in GDP, most noticeably Germany (+1.5%) and France (+1.0%). The exception is the United Kingdom, which has recorded the second consecutive fall (-0.9%). The inflation figures are generally coming down – except in the United Kingdom (up 1.2%) and Denmark (up 0.7%). On the demand side, there was an improvement in investments in the United Kingdom (+1.4%) after seven quarters of decline. In the other Member States apart from Italy and Denmark, where there has been some backsliding (-0.5% and -2.8% respectively), investment is generally satisfactory.

In the United States, for which estimates are available covering the second quarter of 1992, economic growth has slowed down (+0.3%), as has inflation, in both quarterly (+0.6%) and annual (+2.6%) terms. Where domestic demand is concerned, the second quarter has seen a marked rise

in investment (+2.9%) whilst both public and private consumption have been virtually static (-0.1% and +0.1% respectively).

In Japan, first-quarter GDP growth was satisfactory (+1.1%), whilst prices remained stationary at +0.0%. In annual terms, inflation is slowing down (+1.7%). Where demand components are concerned, both private and public consumption are up sharply (+0.8% and +1.1% respectively), whilst investments are moving hardly at all (+0.1%).

PRICES: EC annual inflation down to 4.5% in June

The inflation rate for the EC as a whole fell from 4.8% in May to 4.5% in June, the lowest rate since October 1991.

The downward trend of inflation was reported from nearly all Member States. It was the result of moderate to low monthly increases, ranging from 0.4% in Portugal, 0.3% in Belgium and Italy, 0.2% in Germany and Luxembourg and 0.1% in France.

The CPI's of Denmark, Spain and the United Kingdom remained unchanged from May to June, whereas a decrease of 0.2% was recorded in the index of the Netherlands.

The only exception was in Greece, where prices rose strongly by 1.7% between May and June, mainly due to marked increases for food, clothing and recreation.

The quarterly index for Ireland went up by 0.7% between mid-February and mid-May, which corresponds to an average monthly increase of about 0.2%.

The annual inflation rates for the individual Member States still show big differences: inflation in Greece over the last 12 months was more than three times higher than the EC average and more than six times higher than that of Denmark, as the table below shows:

	June'92 June'91	June'91 June'90		June'92 June'91	June'91 June'90
Denmark	2.3%	2.9%	Netherlands	4.0%	3.6%
Belgium	2.6%	3.6%	Germany**	4.3%	3.5%
France	3.0%	3.3%	Italy***	5.4%	6.6%
Ireland*	3.6%	3.1%	Spain	6.2%	6.2%
Luxembourg	3.6%	3.3%	Portugal	9.4%	11.6%
United Kingdom	3.9%	5.8%	Greece	15.1%	18.9%

The corresponding rates for the USA and Japan are 3.1% and 2.3% respectively and that for Canada 1.1% which is the lowest inflation rate of that country for more than 20 years.

* Ireland: May 1992 compared with May 1991, and May 1991 compared with May 1990

** The CPI for the Federal Republic of Germany continues to reflect the geographic borders prior to 3 October 1990.

*** Starting from February 1992 the Italian index is calculated excluding tobacco products.

INDUSTRIAL PRODUCTION: Recovery in EC industrial production slow in coming

The latest figures on industrial production in the European Community (EUR 12) in May 1992 have dashed the previous month's hopes of a modest recovery. The production of all types of goods stagnated. The industrial production index for EUR 12, adjusted for the number of working days, was 114.3 (1985 = 100), representing a rate of increase of 0.2% compared with May 1991. After seasonal adjustment, the index for May was 114.1. The seasonally adjusted figure for EUR 12 production in the last three months for which figures are available (March, April and May 1992) fell by -0.1% compared with the cumulative figure for the previous three months. New orders in EUR 12 (estimated), which had risen by 6% in February/March compared with the same period in 1991, were only 1% higher in April/May than they had been a year before.

The following rates of growth (where available) were recorded for the individual EC Member States:

Ireland 3.5% (estimate); Italy 1.4%; Netherlands 1.0% (estimate); Germany (West) 0.5%; Denmark 0.2%; United Kingdom -0.3%; France -0.7%; Spain -0.9%; Greece -2.2%.

The hoped-for recovery in industrial production has therefore failed to materialize. In the USA, industrial production rose by 1.1% (rate of change for the last three months compared with the previous three months), while in Japan the downturn in industrial production continued at a rate of -2%.

The rates of change for the various types of goods were as follows in the European Community: intermediate goods: 0.0% (USA 0.5%); capital goods: 0.0% (USA 1.2%); consumer goods: -0.1% (USA 1.1%).

A slight recovery can therefore be detected in the USA, while the production of all types of goods in EUR 12 is stagnant and the recession in Japan continues.

BALANCE OF PAYMENTS

Balance of payments: global figures and preliminary trends for 1991: The Community's current account deficit deteriorated by ECU 35 billion to ECU 46.5 billion. The US current account deficit was nearly eliminated, shrinking by almost ECU 64 billion to ECU 8.4 billion. Japan's current account surplus rose by ECU 31 billion to nearly ECU 60 billion.

It can be seen from the above that the respective current account positions of the Community, the USA and Japan underwent dramatic changes in 1991: the Community's current account deficit of ECU 46.5 billion compares with a deficit of ECU 11.1 billion in 1990; the US deficit of ECU 8.4 billion (\$ 10.4 billion) in 1991 followed a much larger one of ECU 72 billion (\$ 91.7 billion), while Japan's 1991 surplus was ECU 59.4 billion (Y 9 890 billion), compared with ECU 28.4 billion (Y 5 216 billion) the year before.

These movements are attributable in part to transfers relating to the Gulf War. Official payments to the USA, for example, rose by ECU 34 billion, while those to Japan fell by ECU 6.7 billion. In the case of the Community, payments of this type partly cancelled each other out, and the balance of official transfers deteriorated by about ECU 4 billion.

Trade in goods showed even larger changes, however. Germany's trade surplus fell by ECU 38.5 billion in 1991. Although some of this fall benefited the other Member States, the Community's balance of trade with the rest of the world worsened by ECU 27 billion to ECU -28.6 billion. The US trade deficit, by contrast, improved by ECU 24.8 billion to ECU 59.8 billion (\$ 74.1 billion). Japan's trade surplus increased by ECU 33.8 billion to stand at ECU 83.6 billion (Y 13 919 billion).

The Community's deficit on invisibles deteriorated by ECU 8.3 billion to ECU 17.9 billion. The US surplus on invisibles improved by ECU 38.9 billion to ECU 51.4 billion (\$ 63.7 billion). Japan's deficit on invisibles worsened slightly to ECU 24.1 billion (Y 4 012 billion).

The current account position of individual Member States underwent some significant changes in 1991. Germany's current account was in deficit to the tune of ECU 16 billion, after a surplus of ECU 37.1 billion in 1990. This was Germany's first current account deficit since 1981. The country's overall trade balance showed a surplus of ECU 18.7 billion, although this was ECU 38.5 billion less than the year before. The UK posted a clear improvement in its current account deficit, which fell to ECU 6.3 billion from ECU 21.4 billion in 1990. The UK's trade deficit improved by ECU 11.5 billion to ECU 14.5 billion. The country's surplus on invisibles nearly doubled to ECU 8.2 billion, thanks to a big reduction in the deficit on transfer payments. The French current account deficit fell considerably, from ECU 11.9 billion in 1990 to ECU 5.2 billion in 1991. France's trade deficit fell by ECU 2.6 billion, the balance of capital transfers being much more favourable than in 1990. Italy saw its current account deficit grow from ECU 11.6 billion in 1990 to ECU 17.1 billion. Italy's trade with the rest of the world posted a small deficit, following a modest surplus the year before. This deterioration was basically due to the country's deficit on invisibles, which reached ECU 16.5 billion, and in particular to reduced capital inflows from investments and transfers. The Spanish and Danish current accounts showed a small improvement, while those of the Netherlands and Portugal deteriorated slightly.

EXTERNAL TRADE

In March 1992, the Community's trade with the rest of the world posted a deficit of ECU 5.7 billion, nearly ECU 1 billion more than in March 1991. It has to be borne in mind, however, that world trade in March 1991 was affected by the Gulf War, which depressed the Community's exports more than its imports. The extra-Community trade balances of most Member States deteriorated compared with March 1991. Among the most seriously affected countries were Spain (ECU -0.4 billion), Germany (ECU -0.3 billion) and Italy (ECU -0.3 billion). Greece's extra-Community trade, by contrast, showed a slight improvement on March 1991 (ECU +0.1 billion), while France's extra-Community trade moved into balance, improving by ECU 0.4 billion in March 1992.

Exports grew at a similar pace to imports (+11.4% and 12.3% respectively compared with March 1991), although, as has already been pointed out, exports in March 1991 were down more sharply than imports. After allowing for the bounce-back from the effects of the Gulf War, exports rose only slightly in 1992 and imports increased at a faster rate.

The cost of the Community's crude oil supplies was not a factor in the deterioration between March 1991 and March 1992, the price of oil having fallen from \$ 18.6 to \$ 16.8 a barrel over the period.

The United States' deficit in March 1992 was ECU 4.2 billion, compared with ECU 2.6 billion in March 1991. The country's imports rose by 19.5% in ecu terms (nearly 15% in dollar terms) between March 1991 and March 1992. Exports were also well up on March 1991, growing by 15.5% in ecu terms and 11% in dollars. These high rates of change are due to the special circumstances prevailing in the reference month, when the United States' exports declined at a slower rate than its imports.

Japan recorded another large trade surplus: ECU 7.4 billion, slightly more than in March 1991. Japanese exports rose by nearly 10% in ecu terms (6% when measured in dollars and 2% in yen). Imports returned to their level of March 1990, growing by 14% in ecu terms (10% when measured in dollars and somewhat more than 6% in yen).

In March 1992, Germany had the biggest overall trade surplus of any Member State: ECU 2.3 billion, compared with ECU 1 billion a year before. The increase was due to the improvement in Germany's intra-Community trade. Ireland and Denmark recorded modest surpluses (ECU 0.3 and 0.2 billion respectively). The Netherlands' trade with the rest of the world was in balance. Greece and Portugal posted deficits of ECU -0.7 and -0.9 billion respectively. Portugal's trade deficit grew by about 0.5 billion compared with March 1991, due to a deterioration in Portugal's intra-Community trade. This was also a factor in the deterioration in the BLEU's deficit with the rest of the world, which rose by ECU 0.3 billion compared with March 1991 to stand at ECU -1.2 billion. Italy's trade was in deficit to the tune of ECU -1.6 billion, while the deficits of the United Kingdom and Spain both exceeded ECU 2 billion (ECU -2.2 billion and ECU -2.4 billion respectively). Spain's intra- and extra-Community trade balances both deteriorated, leaving the country's total deficit nearly ECU 1 billion higher than in March 1991.

Intra-Community trade grew by 10.8% between March 1991 and March 1992, less than the 12.3% increase in the Community's imports from the rest of the world.

«Eurostatistiques – Données pour l'analyse de la conjoncture» est une publication mensuelle qui a comme but de fournir dans les meilleurs délais les données statistiques les plus récentes pour la Communauté européenne en tant qu'ensemble (EUR 12), pour les pays membres ainsi que pour leurs principaux partenaires extracommunautaires (États-Unis d'Amérique et Japon).

«Eurostatistiques» ne publie pas d'une manière exhaustive toutes les statistiques disponibles auprès d'Eurostat, mais les importantes parmi celles-ci.

Afin de permettre des analyses diverses et, si nécessaire, à plus long terme, sont publiées généralement des données annuelles sur une période de quatre ans, des données trimestrielles pour les cinq derniers trimestres et des données mensuelles pour les quinze derniers mois disponibles.

Cette publication se veut rapide et facilement maniable. Pour cette raison, elle ne comporte pas de notes méthodologiques, disponibles d'ailleurs dans les publications spécialisées d'Eurostat.

«Eurostatistiques» contient trois types d'informations, actualisés mensuellement:

- la rubrique «en bref» commente les principaux événements et tendances résultant des évaluations récentes;
- la partie «Graphiques» illustre les séries économiques les plus importantes pour la Communauté, les États membres, les États-Unis et le Japon;
- la partie «Données conjoncturelles» présente des données harmonisées par Eurostat sur la base des critères communs, pour l'ensemble des États membres et avec des comparaisons avec les États-Unis et le Japon;

Les données publiées dans «Eurostatistiques» proviennent du domaine «ICG» de la base de données Cronos.

En se connectant à Cronos, il est possible de suivre la mise à jour des tableaux de cette publication journalièrement en consultant les données en temps réel. Le mode de consultation «on line» se trouve à la fin de cette publication.

Eurostat est en train de mettre en place un nouveau système d'information conjoncturelle.

Dans ce contexte, à partir du numéro 2/92, la partie «Tableaux par pays» de cette publication sera disponible seulement en mode de consultation «on-line» et sur disquette.

O	Donnée inférieure à la moitié de l'unité utilisée
%	Pourcentage
%, T4/T0	Accroissement en pourcentage d'un trimestre sur le trimestre correspondant de l'année précédente
%, T12/T0 } %, T/T-12 }	Accroissement en pourcentage d'un mois sur le mois correspondant de l'année précédente
%, SOLDE	Solde entre les réponses positives (accroissement, amélioration de la situation) et les réponses négatives (diminution, détérioration de la situation) à l'enquête de conjoncture auprès des chefs d'entreprise de la Communauté

Sauf indications contraires, les données portent sur le territoire de la République fédérale d'Allemagne avant le 3.10.1990, Berlin-Ouest inclus.

TAUX DE CHANGE: Le dollar US à son niveau le plus bas par rapport au deutschmark

Le dollar vient de descendre à son niveau le plus bas de l'après-guerre par rapport au deutschmark. En dépit des interventions répétées des banques centrales en vue de stabiliser sa valeur, il a en effet été coté 1,437 DM le vendredi 21 août et 1,402 DM le lundi 24 août à la clôture de la séance à Londres. Son niveau le plus bas précédent (1,443 DM) datait de février 1991.

Alors qu'il s'échangeait à 1,517 DM au début du mois de juillet, le dollar s'est progressivement déprécié au cours des semaines suivantes, malgré deux interventions des banques centrales (le 20 juillet et le 11 août). La récente accélération de sa chute sur les marchés extérieurs, qui intervient à la suite d'une dépréciation continue depuis la fin du mois d'avril, est due aux craintes engendrées par la récession persistante de l'économie américaine, à l'incertitude politique entourant les résultats des élections présidentielles de novembre et à l'importance de l'écart entre les taux d'intérêt américain et allemand, qui atteint actuellement presque 6 %.

Ce différentiel d'intérêt a augmenté à deux reprises au cours de l'été: le 2 juillet, quant la Réserve fédérale américaine a baissé son taux d'escompte de 0,5 % à 3 %, niveau le plus bas depuis 1963, et le 16 juillet, lorsque le conseil de la Bundesbank a décidé une augmentation du taux d'escompte allemand de 0,75 % à 8,75 %. Le taux Lombard est toutefois resté stable à 9,75 %, ce qui a quelque peu rassuré les marchés financiers.

L'initiative de la Bundesbank a entraîné une réaction immédiate des banques centrales autrichienne, italienne, belge et espagnole. La Banque d'Italie a réévalué son taux d'escompte de 0,75 % à 13,75 % et son taux d'intervention de la même marge à 15,25 %. Il s'agit de la deuxième augmentation du taux d'escompte italien depuis le début du mois de juillet; le 3 juillet, celui-ci avait été augmenté de 1 % à 13 % à la suite de la faiblesse de la lire dans le mécanisme des taux de change (MTC). Un mois plus tard (4 août), la Banque d'Italie avait cependant pu abaisser ces deux taux de 0,5 %, mais au cours de la période d'extrême faiblesse du dollar, le 24 août, la lire a de nouveau subi des pressions et s'est rapprochée de son cours plancher par rapport au DM.

Ayant relevé son taux d'intervention de 0,15 % à 9,45 % le 16 juillet à la suite de la hausse allemande, la Banque nationale de Belgique s'est vue à nouveau obligée, un mois plus tard, de réévaluer ce même taux à 9,6 %. Cette intervention était destinée à réduire l'écart entre les taux à court terme belges et allemands.

Les autres banques centrales de la Communauté ont pu éviter d'augmenter leurs taux, malgré la dépréciation de certaines monnaies. La livre s'est constamment affaiblie par rapport au deutschmark: entre la fin du mois de juin et le 21 août, elle a perdu 3,6 % de sa valeur et le 21 août, elle était à moins de 2 piennings de son cours plancher. Le même jour, son indicateur de divergence par rapport à l'écu se situait à -76 %, dans un climat de préoccupation quant à l'ampleur et à la durée de la récession au Royaume-Uni.

Parmi les autres monnaies du MTC, l'escudo portugais a glissé du sommet de la grille à la cinquième place, après que le 19 août, la Banque du Portugal a baissé son taux d'intervention (le taux auquel elle prête aux banques commerciales) de 1 % pour le ramener à 16 %. Cette baisse fait suite à l'annonce de la suppression de toutes les mesures de contrôle des capitaux encore en vigueur avant la fin de 1992. La peseta est actuellement (22 août) au sommet de la grille, suivie du franc belge, du mark allemand et du florin néerlandais.

Les cours des actions japonaises ont continué de baisser: le 18 août, l'indice Nikkei a perdu 4,2 % pour terminer à 14309, son niveau le plus bas depuis six ans. Les jours suivants, le marché boursier s'est cependant quelque peu repris. En raison de la faiblesse de la demande intérieure et d'autres préoccupations que connaît l'économie japonaise, la faiblesse du dollar US n'a pas été aussi prononcée par rapport au yen que par rapport aux autres monnaies.

RENDEMENT DES OBLIGATIONS D'ETAT: Hausse des rendements au Danemark, en Espagne, en France et en Italie

Depuis le vote danois sur le traité d'Union européenne, au début de juin, le rendement des obligations d'Etat a augmenté de 0,8 % au Danemark, de 1,1 % en Espagne, de 0,6 % en France et de 0,6 % en Italie. Ces hausses sont le reflet de l'incertitude croissante quant à l'évolution du rendement des obligations d'Etat et de l'inflation dans certains Etats membres de la Communauté.

Les rendements des obligations d'Etat ont également augmenté au Japon en juillet, après avoir diminué en juin: le rendement des obligations émises par l'Etat central est passé de 5,1 % en juin à 5,7 % en juillet. Toutefois, du fait de la baisse du taux d'escompte japonais de 3,75 % à 3,25 % le 27 juillet, les rendements des obligations pourraient accuser une baisse en août, d'autant plus que la faiblesse du marché des valeurs incite les investisseurs nippons à se détourner des actions au profit des obligations.

Le rendement réel des obligations (compte tenu de l'inflation) est indiqué dans le tableau suivant:

Taux d'intérêt réels à long terme (moyennes mensuelles)

	12/91	3/92	6/92
Belgique	6,2	6,1	6,3
Danemark	6,5	6,1	6,7
Allemagne	4,3	3,3	4,0
Espagne	6,3	4,5	5,5
France	6,1	5,9	6,2
Italie	4,8	6,2	6,6
Luxembourg	5,5	4,7	4,3
Pays-Bas	3,9	4,1	4,4
Portugal	4,7	4,0	2,1
Royaume-Uni	5,1	5,5	5,1
Etats Unis	4,5	4,7	4,6
Japon	2,8	3,3	2,8

La moyenne arithmétique des rendements des obligations dans la Communauté a baissé au cours des six derniers mois, passant de 5,3 % en décembre 1991 à 5,1 % en juin 1992. Cette baisse cache toutefois des tendances divergentes entre les économies de la Communauté. Les rendements réels ont augmenté en Italie et aux Pays-Bas tandis qu'ils ont

diminué au Luxembourg et au Portugal. Ils sont les plus élevés au Danemark (6,7 %), où des rendements nominaux relativement élevés se conjuguent avec une faible inflation. Le Portugal a actuellement les rendements réels les plus bas (2,1 %), alors qu'ils atteignaient 4,7 % à la fin de 1991. Dans l'intervalle, le Portugal a connu une baisse des rendements nominaux combinée à une augmentation récente de l'inflation.

MASSE MONETAIRE: Croissance de ALP en dessous de la fourchette fixée pour 1992 en Espagne

Le taux de croissance annualisé de ALP (actifs liquides détenus par les non-banques) a atteint 6,4 % en mai, pour le quatrième mois consécutif en dessous de la fourchette cible de 8-11 % fixée pour 1992.

La croissance monétaire reste très lente dans les autres pays également. Aux Etats-Unis, la croissance de M2 en base annuelle a atteint 3,3 % en mai, en augmentation par rapport aux deux mois précédents, mais néanmoins toujours proche de la limite inférieure de la fourchette de 2,5 % à 3,5 % que s'est fixée la Réserve fédérale. Au Japon, M2 a à peine augmenté de 1,6 % d'avril 1991 à avril 1992. Au Royaume-Uni, le taux de croissance de M4 se maintient à des niveaux historiquement bas. En France, la croissance de M2 a été négative en mai pour le neuvième mois consécutif, bien que M3 ait connu une forte hausse. Cet agrégat se maintient dans la fourchette de 4 % à 6 % que s'est fixée la Banque de France pour 1992.

La Grèce a toutefois enregistré une accélération sensible de la croissance de M3 au cours des quatre derniers mois; la croissance M3 annualisée y a atteint 17,1 % en juin contre 11,6 % en mars, bien au-dessus de la fourchette de 9 % à 12 % que s'est fixée la Banque de Grèce. En novembre 1991, la Grèce connaissait une croissance monétaire faible et la valeur annualisée de M3 atteignait à peine 6,3 %. En Allemagne également, la croissance de M3 reste au-dessus de la fourchette cible de la Bundesbank de 3,5 à 5,5 % pour 1992; en mai, le taux de croissance d'une année sur l'autre a atteint 8,3 %.

RESERVES DE CHANGE: Hémorragie des réserves italiennes

L'Italie a dépensé plus de 5 milliards d'écus en juin, soit 16 % de ses réserves totales. Ces chiffres donnent une idée de l'ampleur des interventions de la Banque d'Italie au moment où la lire a été attaquée sur les marchés des changes étrangers au lendemain du 'non' danois au Traité de Maastricht. Depuis le début de 1992, les réserves italiennes ont diminué de 30 %.

A l'exception de l'Espagne et du Portugal, les réserves de tous les Etats membres de la Communauté ont diminué en juin. Cette baisse s'explique en partie par la chute du dollar par rapport à l'écu: dans la mesure où le dollar compte pour une bonne part dans les réserves de devises des pays de la Communauté, une baisse de sa valeur sur les marchés étrangers peut entraîner une différence dans le volume des réserves d'un pays exprimées en écus.

L'Espagne et le Portugal, les deux pays qui avaient (à ce moment) les monnaies MTC les plus fortes ont vu leur réserves augmenter respectivement de 0,2 % et 4,1 % en juin. Le Portugal continue d'attirer les devises au lendemain de l'entrée de l'escudo dans le MTC: fin juin, ce pays possédait environ 7,3 % des réserves de change des Douze contre 6,5 % à la fin de 1991.

Taiwan a annoncé que ses réserves de change atteignaient officiellement le montant record de 86,6 milliards de dollars (64 milliards d'écus) à la fin juin 1992. Ces réserves se composent d'obligations d'Etat étrangères et de dépôts en devises.

COMPTES TRIMESTRIELS: Au cours du premier trimestre 1992: légère reprise de l'économie communautaire (PIB +0,8 %) accompagnée par une sensible baisse de l'inflation (+0,7 %).

Le premier trimestre 1992 a été caractérisé, pour l'économie communautaire dans son ensemble, après un trimestre de stagnation, par une légère reprise de la production (PIB +0,8 %). Cette reprise doit quand même être interprétée avec beaucoup de prudence: plusieurs éléments semblent indiquer, en réalité, la persistance d'une phase d'incertitude pour l'économie mondiale. Les raisons de cette phase d'incertitude peuvent être synthétisées en trois points. Tout d'abord, les exigences des pays les plus développés, pour la première fois dans les dernières années, semblent ne pas converger vers un objectif commun comme il a été mis en évidence dans la dernière réunion du G7. En deuxième lieu, le retard dans les travaux du GATT détermine une stagnation du commerce international qui est un important véhicule de transmission de la reprise économique. Enfin, les difficultés sur les marchés financiers et plus récemment des devises découragent les investisseurs qui préfèrent attendre une clarification de la situation.

En ce qui concerne l'évolution des prix, mesurée par le déflateur implicite du PIB, on constate une sensible baisse de l'inflation tant en rythme trimestriel qu'annuel (+0,7 % et +4,3 % respectivement). Ce résultat confirme la validité des politiques monétaires restrictives adoptées dans la plupart des Etats membres et qui ont été caractérisées par une nouvelle hausse des taux d'intérêt intervenue au mois de juillet.

En ce qui concerne les composantes du PIB, le fait marquant de ce trimestre est représenté par la reprise des investissements (+0,9 %) après le fléchissement enregistré au cours du trimestre précédent. Par ailleurs, tant la consommation privée que publique montrent un temps d'arrêt (+0,1 % et -0,1 % respectivement).

En ce qui concerne la situation dans les Etats membres, on constate une reprise généralisée du PIB, plus prononcée en R.F. d'Allemagne et en France (+1,5 % et +1,0 % respectivement) sauf au Royaume-Uni où on observe le deuxième fléchissement consécutif (-0,9 %). En ce qui concerne l'inflation, les chiffres nous montrent une baisse généralisée sauf au Royaume-Uni et au Danemark où on constate une reprise (+1,2 % et +0,7 % respectivement). Du côté de la demande, le fait le plus important de ce trimestre est représenté par la reprise des investissements au Royaume-Uni (+1,4 %) après sept trimestres de baisse. Dans les autres Etats membres, l'évolution des investissements est plutôt positive sauf en Italie et au Danemark où on observe un fléchissement (-0,5 % et -2,8 % respectivement).

Aux Etats-Unis, dont on dispose des estimations pour le deuxième trimestre 1992, on observe un ralentissement de la croissance économique (+0,3 %) ainsi que de l'inflation tant trimestrielle qu'annuelle (+0,6 % et +2,6 % respectivement). Parmi les composantes de la demande interne, le deuxième trimestre montre une sensible croissance des investissements (+2,9 %); tandis que la consommation, tant privée que publique, est caractérisée par un temps d'arrêt (-0,1 % et +0,1 % respectivement).

Pour le Japon, le premier trimestre 1992 a été caractérisé par une bonne croissance du PIB (+1,1 %) accompagnée par une stagnation dans l'évolution des prix (+0,0 %) lorsque en rythme annuel on constate un léger ralentissement de l'inflation (+1,7 %). Parmi les composantes de la demande, on observe une sensible progression de la consommation tant privé que publique (+0,8 % et +1,1 % respectivement); tandis que les investissements montrent une évolution plutôt faible (+0,1 %).

PRIX: Le taux d'inflation annuelle de la CE descend à 4,5 % en juin.

Le taux d'inflation annuelle au cours des derniers 12 mois pour l'ensemble de la CE est passé de 4,8 % en mai à 4,5 % en juin, le taux le plus bas depuis octobre 1991. Presque tous les Etats Membres ont enregistré des tendances de recul de l'inflation. Ceci s'est traduit par des accroissements modérés à faibles, 0,4 % au Portugal, 0,3 % en Belgique et en Italie, 0,2 % en Allemagne et au Luxembourg et 0,1 % en France. De plus les IPC du Danemark, de l'Espagne et du Royaume-Uni sont restés inchangés entre mai et juin, tandis que celui des Pays-Bas a subi une baisse de 0,2 %. La seule exception est la Grèce, où les prix ont augmenté fortement de 1,7 % entre mai et juin à la suite des hausses pour l'alimentation, l'habillement et les loisirs. L'indice trimestriel de l'Irlande a progressé de 0,7 % entre mi-février et mi-mai, ce qui correspond à une hausse en moyenne mensuelle d'environ 0,2 %.

Les taux d'inflation annuelle pour les Etats Membres continuent à montrer des grandes divergences: l'inflation pour la Grèce sur les derniers 12 mois est plus de trois fois plus élevée que la moyenne communautaire et plus de six fois celle du Danemark, comme le tableau ci-dessous le montre:

	Juin 92	Juin 91		Juin 92	Juin 91
	Juin 91	Juin 90		Juin 91	Juin 90
Danemark	2,3 %	2,9 %	Pays-Bas	4,0 %	3,6 %
Belgique	2,6 %	3,6 %	R.F. d'Allemagne**	4,3 %	3,5 %
France	3,0 %	3,3 %	Italie***	5,4 %	6,6 %
Irlande*	3,6 %	3,1 %	Espagne	6,2 %	6,2 %
Luxembourg	3,6 %	3,3 %	Portugal	9,4 %	11,6 %
Royaume-Uni	3,9 %	5,8 %	Grèce	15,1 %	18,9 %

Les taux correspondants pour les USA et Japon sont 3,1 % et 2,3 %; celui pour le Canada est de 1,1 %, taux le plus bas depuis plus de 20 ans.

* Irlande: mai 1992 comparé à mai 1991, mai 1991 comparé à mai 1990

** L'IPC pour la R.F. d'Allemagne continue à se rapporter à la situation territoriale avant le 3 octobre 1990

*** A partir de février 1992 l'indice italien ne comprend pas le tabac

PRODUCTION INDUSTRIELLE: La reprise de la conjoncture industrielle se fait attendre

A la lecture des chiffres les plus récents (mai 1992) de la production industrielle de la Communauté européenne (EUR 12), on constate que la légère croissance espérée le mois précédent ne s'est pas produite. Toutes les branches de l'industrie stagnent. En mai de cette année, l'indice de la production corrigé du nombre de jours ouvrables était de 114,3 (1985=100) pour la Communauté européenne, ce qui correspond à un taux de variation de 0,2 % par rapport à la valeur de mai 1991. L'indice corrigé des variations saisonnières était de 114,1 pour le même mois. Par rapport à la valeur cumulée des mois de décembre, janvier et février, la production EUR 12 corrigée des variations saisonnières a baissé de -0,1 % au cours des trois derniers mois disponibles (mars, avril, mai). Si en février/mars, les nouvelles commandes de la CE (estimation) ont encore augmenté de 6 % par rapport à la valeur de l'année précédente, le taux de croissance correspondant est passé à 1 % en avril/mai.

Pour les différents Etats membres de la CE, les taux de croissance correspondants (dans la mesure où ils sont disponibles) sont les suivants: Irlande 3,5 % (estimation), Italie 1,4 %, Pays-Bas 1,0 % (estimation), Allemagne (Ouest) 0,5 %, Danemark 0,2 %, Royaume-Uni -0,3 %, France -0,7 %, Espagne -0,9 %, Grèce -2,2 %. La reprise de la production industrielle n'est donc pas encore intervenue.

Aux Etats-Unis, la production industrielle est en hausse avec un taux de 1,1 % (taux de variation des trois derniers mois par rapport aux mois précéd.) au Japon, le recul de la production se poursuit avec un taux de -2 %.

Ventilées par catégories de biens, les variations pour la CE au cours des trois derniers mois par rapport aux mois précédents se décomposent comme suit: 0,0 % pour les biens intermédiaires (USA 0,5 %), 0,0 % pour les biens d'investissement (USA 1,2 %), -0,1 % pour les biens de consommation (USA 1,1 %).

On observe donc une légère reprise aux Etats-Unis, alors que dans la Communauté européenne la stagnation affecte toutes les catégories de biens et que la récession se poursuit au Japon.

BALANCE DES PAIEMENTS

Tendances mondiales - chiffres préliminaires de 1991: Dégradation de 35 milliards d'écus de la balance courante communautaire qui atteint un déficit de -46,5 Mrds. Le déficit courant américain se rapproche de l'équilibre, il s'établit à -8,4 Mrds et s'améliore de près de 64 Mrds. La balance courante japonaise, en excédent de près de 60 Mrds, s'améliore de 31 Mrds.

Les balances des paiements courants de la Communauté, des USA et du Japon ont connu de profonds bouleversements en 1991. La balance courante communautaire atteint un

déficit de 46,5 Mrds d'écus, après un déficit de 11,1 Mrds en 1990. La balance américaine s'établit à -8,4 Mrds d'écus (\$ -10,4 Mrds) après -72 Mrds (\$ 91,7 Mrds); la balance japonaise à 59,4 Mrds (Yen 9890 Mrds) après 28,4 Mrds (Yen 5216 Mrds).

Une partie de ces mouvements est attribuable aux transferts liés à la guerre du Golfe, on observe une augmentation de 34 Mrds d'écus du solde des transferts officiels aux USA et une baisse de 6,7 Mrds au Japon; pour la Communauté, les paiements se sont partiellement compensés et le solde des transferts officiels enregistre une détérioration d'environ 4 Mrds d'écus.

Toutefois, les changements majeurs s'enregistrent du côté du commerce des marchandises. En 1991, l'excédent allemand s'est résorbé de 38,5 Mrds d'écus, une partie de cette résorption a profité aux autres Etats Membres de la Communauté mais au total, la balance commerciale communautaire s'est détériorée de 27 Mrds d'écus et atteint -28,6 Mrds. La balance commerciale américaine par contre s'est améliorée de 24,8 Mrds d'écus et s'établit à -59,8 Mrds (\$ 74,1 Mrds). L'excédent japonais a gagné 33,8 Mrds et atteint 83,6 Mrds (Yen 13919 Mrds).

Du côté des échanges d'invisibles, le déficit communautaire connaît une dégradation de 8,3 Mrds d'écus et s'établit à -17,9 Mrds. Le solde américain enregistre une progression de 38,9 Mrds et atteint 51,4 Mrds d'écus (\$ 63,7 Mrds). Le solde japonais connaît une légère dégradation et s'établit à -24,1 Mrds d'écus (Yen 4012 Mrds).

Les paiements courants des Etats Membres ont connu en 1991, d'importantes modifications. La balance courante allemande s'inscrit en déficit de 16 Mrds d'écus, après un excédent de 37,1 Mrds en 1990. C'est le premier déficit depuis 1981. Le solde commercial reste excédentaire à 18,7 Mrds d'écus, mais il enregistre une baisse de 38,5 Mrds par rapport à son niveau de 1990. Le déficit courant britannique affiche un net redressement. Le solde passe de -21,4 Mrds en 1990 à -6,3 Mrds. Le déficit commercial se réduit de 11,5 Mrds d'écus et atteint -14,5 Mrds. L'excédent des invisibles double pratiquement et s'établit à 8,2 Mrds grâce à la forte réduction du déficit des transferts. Le déficit courant français s'est fortement réduit, il atteint -5,2 Mrds après -11,9 Mrds en 1990. Le déficit commercial s'est réduit de 2,6 Mrds d'écus tandis que le solde du poste transferts en capital a été beaucoup moins défavorable qu'en 1990. L'Italie connaît une détérioration importante de son déficit courant qui passe de -11,6 Mrds en 1990 à -17,1 Mrds. Le solde commercial devient légèrement déficitaire après un faible excédent. La détérioration provient essentiellement du déficit des invisibles qui atteint -16,5 Mrds et notamment des postes revenus des investissements et transferts. Les soldes courants espagnols et danois ont connu de légères améliorations; les soldes néerlandais et portugais de faibles détériorations.

COMMERCE EXTERIEUR

En mars 1992, les échanges extra-communautaires se soldent par un déficit de 5,7 Mrds d'écus, plus lourd de près d'un milliard par rapport à celui de mars 1991. Mais le profil de mars 1991 est affecté par la Guerre du Golfe: les flux échangés sont moindres, et les exportations sont en recul plus prononcé que les importations. Les soldes extra des pays membres sont pour la plupart détériorés par rapport à mars 1991. Parmi les plus touchés: l'Espagne (-0,4 Mrd d'écus), l'Allemagne (-0,3 Mrd), l'Italie (-0,3 Mrd). Par contre la Grèce améliore légèrement son solde en comparaison de mars 1991 (+0,1 Mrd), tandis que le bilan du commerce extra-communautaire de la France se relève de 0,4 Mrd d'écus: il parvient à l'équilibre en mars 1992.

Les exportations progressent quasiment au même rythme que les importations (respectivement +11,4 % et +12,3 % par rapport à mars 1991), mais cette évolution semblable est mesurée par rapport à mars 1991, où les exportations ont été plus affectées à la baisse que les importations. La progression des exportations reste faible si on omet l'effet de rattrapage lié à la Guerre du Golfe, tandis que celle des importations est plus nette.

Le coût d'approvisionnement de la Communauté en pétrole brut n'a pas contribué à la dégradation du solde entre mars 1991 et 1992. Il baisse de 18,6 dollars le baril en mars 1991 à 16,8 dollars en mars 1992.

Le déficit des Etats-Unis en mars 1992 est de 4,2 Mrds d'écus, contre 2,6 Mrds en mars 1991. Les importations des Etats-Unis progressent de 19,5 % en écus entre mars 1991 et 1992, soit près de 15 % en dollars. Les exportations connaissent aussi une progression nette rapportée à mars 1991: 15,5 % en écus, soit 11 % en dollars. Ces taux élevés sont dus à la spécificité du mois de référence, où les flux importés par les Etats-Unis se sont contractés plus que les flux exportés.

L'excédent japonais reste à un niveau élevé: 7,4 Mrds d'écus, à peine supérieur à celui de mars 1991. Les exportations du Japon progressent de près de 10 % en écus, soit 6 % en dollars, et 2 % en yens. Les importations augmentent de 14 % en écus, et retrouvent leur niveau de mars 1990. Leur progression est ramenée à 10 % en dollars et à plus de 6 % en yens.

En mars 1992, l'Allemagne dégage le solde commercial total le plus élevé des pays communautaires, soit 2,3 Mrds d'écus, contre 1 Mrd en mars 1991. Cette augmentation provient de l'amélioration des résultats de l'Allemagne en matière de commerce intra. L'Irlande et le Danemark présentent des bilans légèrement positifs (0,3 et 0,2 Mrd d'écus). Le bilan des échanges des Pays-Bas est équilibré. Les déficits de la Grèce et du Portugal approchent le milliard d'écus (respectivement -0,7 et -0,9 Mrd). Le déficit portugais s'accroît d'un demi milliard par rapport à mars 1991, suite à la dégradation des échanges intra-communautaires de ce pays. Il en est de même pour l'UEBL, dont le solde déficitaire, alourdi de 0,3 Mrd d'écus comparé à celui de mars 1991, atteint -1,2 Mrd d'écus. L'Italie enregistre un solde de -1,6 Mrd d'écus, tandis que les déficits du Royaume-Uni et de l'Espagne dépassent 2 Mrds d'écus (respectivement -2,2 Mrds et -2,4 Mrds). Les bilans commerciaux intra et extra communautaires de l'Espagne se dégradent par rapport à mars 1991 ce qui conduit à une augmentation du déficit total de près d'un milliard d'écus.

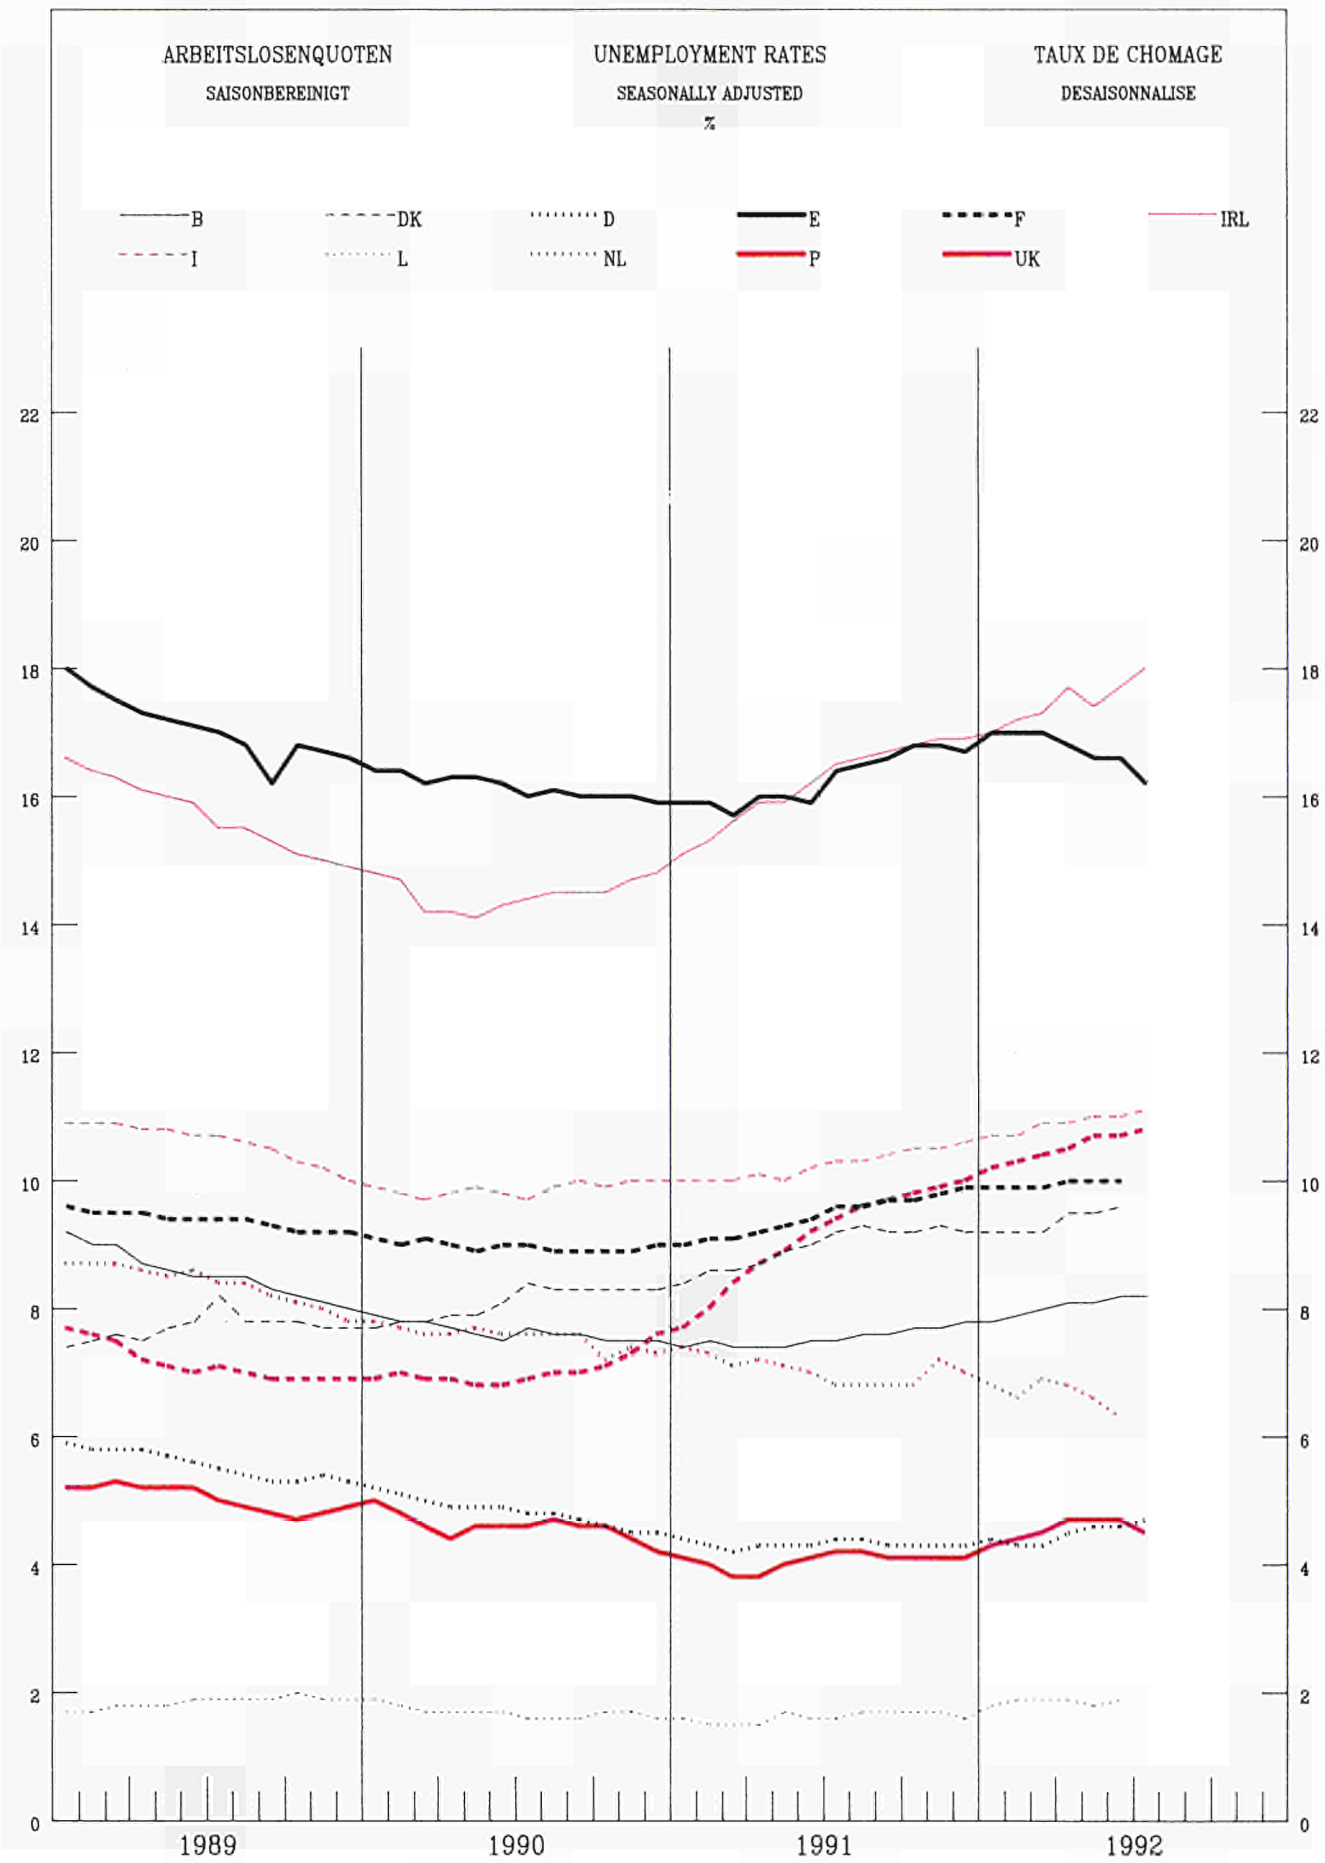

Le commerce intra-communautaire progresse de 10,8 % en mars 1992 rapporté à mars 1991, moins vite que les importations extra-communautaires (12,3 %).

„On line“-Abfrage

Eurostatistik beinhaltet zwei verschiedene Tabellentypen:

1. Variablen tabellen, eine Variable pro Tabelle – 2. Ländertabellen – ungefähr 30 Variable pro Land

Jede Zeitreihe ist durch einen neunstelligen numerischen Code gekennzeichnet, der seinerseits in Unterkodes gegliedert ist, welche – im Falle von „Eurostatistik“ – das Land, den Sektor, die Tabelle, die Einheit und die Periodizität bezeichnen.

Die Bedeutung der einzelnen Unterkodes ist der nachstehend aufgeführten Tabelle zu entnehmen.

Land XX	Sektor XX	Tabelle XXXX	Periodizität und Einheit X
06 EUR 12* 03 EUR 10 11 D* 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A. Variablen tabellen XXXX vierstelliger Wert, der im Titel jeder Tabelle erscheint <hr/> B. Ländertabellen 00XX vor dem Titel jeder Variable (siehe Liste auf der nächsten Seite)	0 jährlich, Angaben in Prozent 1 vierteljährlich, Angaben in Prozent 2 monatlich, Angaben in Prozent 3 jährlich, Indexangaben (1985 = 100) 4 vierteljährlich, Indexangaben (1985 = 100) 5 monatlich, Indexangaben (1985 = 100) 6 jährlich, Angaben in absoluten Werten 7 vierteljährlich, Angaben in absoluten Werten 8 monatlich, Angaben in absoluten Werten 9 Gewicht, EUR 10 = 100 bzw. EUR 12 = 100 (nicht vorhanden für die Ländertabellen)

Beispiele:

1. *Variablen tabelle*: Will man die monatliche Arbeitslosigkeit (in absoluten Zahlen) von Deutschland gemäß Tabelle 0304 dieser Veröffentlichung erfahren, so braucht man nur den Code 12 93 0304 8 einzugeben.

2. *Ländertabelle*: Will man den Preisindex von Frankreich auf der Basis 1980 = 100 gemäß der Tabelle „Frankreich“ dieser Veröffentlichung erfahren, so braucht man nur den Code 14 93 0031 3 (jährliche Angaben) oder 14 93 0031 5 (monatliche Angaben) einzugeben.

‘On-line’ consultation

Eurostatistics consists of two types of tables:

1. Table by indicators, one indicator by table – 2. Table by country including approximately 30 indicators by country.

Each time series is identified by a nine-digit code broken down into subcodes, which in the case of Eurostatistics, represent the country, sector, table unit and periodicity. The significance of the different subcodes may be found in the table below.

Country XX	Sector XX	Table XXXX	Periodicity and unit X
06 EUR 12* 03 EUR 10 11 D* 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A. Table by indicator XXXX 4-digit value quoted in the title of each table <hr/> B. Table by country 00XX before each indicator (see following page)	0 annual in % 1 quarterly in % 2 monthly in % 3 annual index 1985 = 100 4 quarterly index 1985 = 100 5 monthly index 1985 = 100 6 annual absolute value 7 quarterly absolute value 8 monthly absolute value 9 weighting EUR 10 = 100 or EUR 12 = 100 (does not exist for tables by country)

Consultation example:

1. *Table by indicator*: to know the monthly unemployment (absolute figures) of Germany as is shown in Table 0304 of this publication, the code 12 93 0304 8 should be formed.

2. *Table by country*: to know the price index, 1980 = 100 for France as shown in the France table of this publication, the code 14 93 0031 3 should be formed for annual figures and 14 93 0031 5 for monthly figures.

Mode de consultation «on-line»

Eurostatistiques comprend deux types de tableaux:

1) tableaux par variable, une variable par tableau – 2) tableaux par pays comprenant environ 30 variables par pays.

Chaque série chronologique est identifiée par un code à neuf chiffres structuré en sous-codes représentant, dans le cas d'Eurostatistiques, le pays, le secteur, le tableau, l'unité et la périodicité. On trouvera dans le tableau ci-dessous la signification des différents sous-codes.

Pays XX	Secteur XX	Tableau XXXX	Périodicité et unité X
06 EUR 12* 03 EUR 10 11 D* 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A – Tableaux par variable XXXX valeur à 4 chiffres figurant dans le titre de chaque tableau <hr/> B – Tableaux par pays 00XX devant le titre de chaque variable (voir liste page suivante)	0 annuelle exprimée en pourcentage 1 trimestrielle exprimée en pourcentage 2 mensuelle exprimée en pourcentage 3 annuelle exprimée en indice 1985 = 100 4 trimestrielle exprimée en indice 1985 = 100 5 mensuelle exprimée en indice 1985 = 100 6 annuelle exprimée en valeur absolue 7 trimestrielle exprimée en valeur absolue 8 mensuelle exprimée en valeur absolue 9 pondération EUR 10 = 100 ou EUR 12 = 100 (inexistant pour les tableaux par pays)

Exemple de consultation:

1) *tableau par variable*: pour connaître le chômage mensuel (chiffres absolus) de la RF d'Allemagne, tel qu'il figure au tableau 0304 de cette publication, il suffit d'appeler le code 12 93 0304 8;

2) *tableau par pays*: pour connaître l'indice des prix 1980 = 100 de la France tel qu'il figure au tableau «France» de cette publication, il suffit d'appeler le code 14 93 0031 3 (annuel), 14 93 0031 5 (mensuel).
