Mit der monatlich erscheinenden Veröffentlichung *Eurostatistik - Daten zur Konjunkturanalyse* werden innerhalb kürzester Frist die neuesten statistischen Daten über die Europäische Gemeinschaft als Ganzes (EUR12), über jedes Mitgliedsland sowie über die Vereinigten Staaten und Japan bekanntgegeben.

Eurostatistik enthält nicht die Gesamtheit des bei Eurostat verfügbaren statistischen Materials, sondern eine Auswahl der relevantesten Reihen über die konjunkturelle Entwicklung.

Schnelligkeit und Pünktlichkeit sind die wichtigsten Vorzüge dieser Veröffentlichung.

Aus diesem Grunde wurde sie im Umfang bewußt klein gehalten und enthält keine Anmerkungen zur Methodik, die im übrigen in den spezialisierten Veröffentlichungen von Eurostat zu finden sind.

Die in Eurostatistik veröffentlichten Daten stammen aus der Datenbank New Cronos. New Cronos setzt sich zusammen aus dem alten Cronos sowie REGIO und ist nicht mehr in Form von Zeitreihen, sondern in Form von multidimensionalen Tabellen dargestellt. New Cronos ist somit eines der Produkte zur Verbreitung statistischer Daten, das direkt aus der Eurostat - Referenzdatenbank gespeist wird. Darüber hinaus sind die Daten in der Datenbank Eurocron verfügbar, die vom Host Eurobases der Kommission angeboten wird.

Wechselkurse: Der Dollar erholt sich

Mitte Mai kam es zu der lang erwarteten Erholung des US-Dollar, der im April gegenüber der deutschen Mark und dem japanischen Yen ein Rekordtief erreicht hatte. Die Erholung war jedoch nur von kurzer Dauer. Der Dollar verlor einen großen Teil seines Kursgewinns bald wieder, weil auf dem Markt die Befürchtung herrschte, daß der US-Wirtschaft eine „weiche Landung“ mißlingen könnte. Von dem Tiefstand von 1,35 DM und 81,1 Yen am 19. April hat sich der Dollar bis zum 26. Mai (Schlußkurse London) auf 1,38 DM und 83,1 Yen gefestigt.

Unterstützt durch einen stärkeren Dollar konnten sich auch andere Währungen gegenüber der DM festigen. Das Pfund Sterling erholte sich deutlich von einem Rekordtief von unter 2,18 DM am 9. Mai, konnte seine Kursgewinne jedoch nicht halten und war bei Börsenschluß am 26. Mai wieder auf 2,22 DM gefallen.

Der französische Franc hatte unter der Ungewißheit des Ausgangs der zweiten Runde der Präsidentschaftswahlen am 7. Mai zu leiden. Nach der Wahl von Jacques Chirac erholte er sich, fiel dann aber bis Börsenschluß in London am 26. Mai auf 3,525 zurück. Der belgische Franc zeigte indessen kaum eine Reaktion auf die Wahlen in Belgien am 21. Mai. Eine Woche vor den Wahlen wurden die amtlichen kurzfristigen Zinssätze um 0,25 % gesenkt.

Währenddessen konnte sich die spanische Peseta im EWS gegenüber der DM weiter erholen. Ende Mai hatte sich sowohl die spanische Peseta als auch der portugiesische Escudo innerhalb ihrer Bandbreiten im Wechselkursmechanismus gut eingerichtet. Das irische Pfund war die schwächste Währung in dem System, trotzdem war seine Position gesichert.

Die amtlichen Zinssätze Italiens wurden am 26. Mai als Reaktion auf die steigende Inflation um 0,75 % angehoben, weshalb der Diskontsatz auf 9 % und der Lombardsatz auf 10,5 % erhöht wurde. Die Schwäche der Lira war einer der Gründe für die zunehmende Inflation. In den letzten Wochen hat sich die Lira allerdings von einem Tiefpunkt von 1 264 LIT gegenüber der DM am 19. April auf LIT 1 189 am 26. Mai erholt.

Sowohl die schwedische Krone als auch die Finnmark, zwei Währungen außerhalb des Wechselkursmechanismus, haben sich im Mai gegenüber der DM leicht gefestigt.

Renditen von Staatsanleihen: Erholung auf breiter Front im Mai

Auf den Anleihemärkten kam es im Mai zu einer Erholung auf breiter Front. Dies war die Reaktion auf Anzeichen dafür, daß das wirtschaftliche Wachstum und die Inflationsgefahr in mehreren Ländern einschließlich USA, VK, Deutschland und Japan geringer waren als ursprünglich erwartet. Das Interesse der ausländischen Investoren am US-Anleihemarkt wurde auch durch den stärkeren Dollar gefördert.

Nach dem Vorbild des US-Markts sanken die Renditen von Staatsanleihen auch auf allen anderen größeren Märkten, inklusive ganz Europa. Innerhalb eines Monats bis zum 26. Mai fielen die Erträge deutscher Bundesanleihen mit zehnjähriger Laufzeit um 0,3 Prozentpunkte auf 6,7 %. Währenddessen fielen die Erträge von französischen OAT und Staatsanleihen (gilts) des VK (zehnjährige Laufzeit) auf 7,4 % bzw. 7,9 %, so daß sich der Abstand zu den Bundesanleihen verringerte. Die höchsten Gewinne hatten jedoch die Staatsanleihen mit höheren Erträgen zu verzeichnen (einschließlich der Staatsanleihen Spaniens, Schwedens und Italiens).

Die Erträge von Staatsanleihen sind seit Januar nach einer starken Baisse auf den Anleihemärkten (und damit steigender Erträge) 1994 allgemein gesunken. Der Ertragsrückgang hat die Steigerungen des Jahres 1994 aber nur teilweise neutralisiert.

Geldvolumen: Weiter allgemein gedämpfte Trends

Die Trends im Geldmengenwachstum lassen im allgemeinen kaum auf zunehmenden Inflationsdruck schließen. Die jährlichen Wachstumsraten der weitgefaßten Geldmengen lagen im Februar in mehreren EU-Ländern knapp über null oder waren negativ.

In Frankreich hat sich das M3-Wachstum in den letzten Monaten beschleunigt und bis Februar innerhalb von 12 Monaten 3,6 % erreicht, vorher jedoch gab es 1994 mehrere Monate lang eine negative Entwicklung. Als Ziel für das Wachstum 1995 hat die Banque de France 5 % gesetzt.

Im VK ist die weitgefaßte Geldmenge M4 in diesem Jahr verglichen mit dem Vorjahr ebenfalls gestiegen, bleibt aber in der unteren Hälfte des Zielkorridors 3-9 %. Die enggefaßte Geldmenge M0 befindet sich hingegen weiterhin außerhalb des Korridors 0-4 %.

Das Geldmengenwachstum (M3) in Deutschland hat sich seit mehr als einem Jahr verlangsamt, was einer der Gründe für die Entscheidung der Bundesbank zur Senkung der Zinssätze Ende März war.

Das Wachstum der weitgefaßten Geldmenge (M3) in Griechenland lag in den letzten Monaten bei etwa 20 %. Dies war bei weitem die höchste Rate in der EU, und sie ging weit über das Ziel hinaus.

Amtliche Währungsreserven: Deutsche Reserven nehmen ab

Der Abwärtstrend bei den amtlichen Währungsreserven Deutschlands setzte sich im Februar fort, und die Reserven gingen auf 62,1 Milliarden ECU zurück. Dies ist der niedrigste Stand seit der Krise im EWS-Wechselkursmechanismus von Juli/August 1993, als die Währungsreserven auf über 90 Milliarden ECU hochschnellten.

Im allgemeinen war in den letzten Monaten gerechnet in ECU ein Abwärtstrend bei den amtlichen Währungsreserven der EU-Mitgliedstaaten festzustellen. Zum Teil ist dies jedoch eine Folge der Bewertung, denn der US-Dollar (die größte Einzelkomponente der Währungsreserven) tendierte schwächer.

Abgesehen von den drei jüngsten EU-Mitgliedsländern (Österreich, Finnland und Schweden) hatte Griechenland als einziges Land in den letzten Monaten einen signifikanten Nettozufluß an Währungsreserven zu verzeichnen, weil ausländisches Kapital durch hohe Zinssätze angezogen wurde. Im Januar erreichten die amtlichen Währungsreserven Griechenlands 11,8 Milliarden ECU, das ist eine Steigerung um mehr als 50 % gegenüber dem Vorjahr.

TEUERUNGSRATE der Europäischen Union der 12 im April 1995 unverändert bei 3,3 %

Die jährliche Inflationsrate der Europäischen Union der 12 lag im April bei vorläufig 3,3 %. Im April 1995 letzten Jahres hatte die Preissteigerungsrate 3,2 % betragen.

Mit 1,5 % hatte Finnland die geringste Teuerung, danach folgte Frankreich mit vorläufig 1,6 %. Zum ersten Mal seit 22 Jahren fiel die Griechische Inflationsrate unter 10 %. Über dem EU-Durchschnitt lagen außerdem Portugal (4,6 %), sowie Italien und Spanien (beide 5,2 %). In Schweden und dem Vereinigten Königreich lag die Preissteigerung mit 3,3 % genau im EU-Durchschnitt.

Für die Inflationsraten der Mitgliedsländer im April – mit entsprechenden Vorjahreszahlen – ergibt sich folgende ansteigende Reihenfolge:

	April 95	April 94	April 95	April 94	
	April 94	April 93	April 94	April 93	
Finnland	1,5 %	0,2 %	Österreich	2,6 %E	3,0 %
Frankreich	1,6 %p	1,7 %	Schweden	3,3 %	1,8 %
Belgien	1,7 %	2,4 %	Ver. Königreich	3,3 %	2,6 %
Luxemburg	2,2 %	2,1 %	Portugal	4,6 %	6,0 %
Deutschland*	2,3 %	3,1 %	Italien	5,2 %p	4,1 %
Dänemark	2,3 %E	2,0 %	Spanien	5,2 %	5,0 %
Niederlande	2,3 %	2,8 %	Griechenland	9,9 %	10,4 %
Irland**	2,5 %	1,7 %			
EUR 15	3,3 %p	3,2 %			

* Der Verbraucherpreisindex für die Bundesrepublik Deutschland bezieht sich weiterhin auf den Gebietsstand vor dem 3.10.90. In den neuen Ländern war der Preisindex im April um 2 % höher als vor Jahresfrist.

** Feb 95 / Feb 94 und Feb 94 / Feb 93

p Vorläufig

E Eurostat Schätzung, Daten nicht verfügbar

ARBEITSLOSENQUOTE: Arbeitslosenquote der Europäischen Union der 15 – 11 % von Januar bis April 1995

Die Arbeitslosenquote der Europäischen Union der 15 lag im April 1995 bei saisonbereinigt 11 %. Neueste Schätzungen haben ergeben, daß die Arbeitslosigkeit in den ersten drei Monaten des Jahres auf dem gleichen Niveau gelegen hatte. Im April des Vorjahres betrug die Arbeitslosenquote 11,4 %.

In den meisten Mitgliedstaaten war die Quote im Zeitraum von Januar bis April 1995 relativ stabil. Sie stieg dagegen in Italien von 12 % auf 12,4 % und in Portugal von 7,5 % auf 8 %. In Spanien, das nach wie vor die höchste Rate der Europäischen Union der 15 aufweist, ist die Arbeitslosigkeit von 23,2 % auf 22,8 % und in Dänemark von 9,3 % auf 8,9 % (März) zurückgegangen. Mit 3,8 % hatte Luxemburg im April die niedrigste Quote.

In der Gruppe der unter 25jährigen ist die Arbeitslosigkeit (21,2 %) beinahe doppelt so hoch wie im Gesamtdurchschnitt der Europäischen Union der 15. In Deutschland dagegen war die Quote in dieser Gruppe mit 7,9 % im April 1995 niedriger als die Gesamtquote (8,2 %). In Italien und Finnland waren an die 34 % der unter 25jährigen ohne Arbeit, in Spanien waren trotz eines Rückgangs noch 42,2 % der Jugendlichen ohne Beschäftigung (Vorjahresmonat 45,5 %).

Nach den Schätzungen von Eurostat waren im April EU-weit etwa 18,2 Millionen Menschen arbeitslos. Dabei handelt es sich um eine saisonbereinigte Zahl, die sich an den Kriterien der Internationalen Arbeitsorganisation (ILO) orientiert.

Anmerkungen

Die Arbeitslosenquote und die Zahl der Arbeitslosen werden nach den Empfehlungen der ILO und unter Berücksichtigung der unterschiedlichen nationalen Methoden zur Erfassung der Arbeitslosigkeit geschätzt.

INDUSTRIEPRODUKTION: Europäischen Union der 15 industrieproduktion steigt weiter

In den Mitgliedstaaten der Europäischen Union der 15 war der Produktionsindex (saison- und restebereinigt) im Zeitraum Dezember bis Februar um 0,9 % höher als in den vorhergehenden drei Monaten.

Der Anstieg des industriellen Outputs halte in allen Mitgliedstaaten an, außer in Griechenland, Portugal und den Niederlanden, so Eurostat.

Die Konjunkturerholung in den USA erweist sich mit einem Anstieg der Industrieproduktion von 1,4 % im gleichen Zeitraum ebenfalls als stabil; in Japan lag der entsprechende Wert bei 0,6 %.

In den Mitgliedstaaten sind die Daten (in Prozent), soweit vorhanden, wie folgt (* = geschätzt):

EUR 15	0,9	Italien	1,2
Dänemark	2,2	Frankreich	0,8
Spanien	1,6	Ver. Königreich	0,6
Österreich	1,5	Niederlande	-0,3
Finnland	1,4	Griechenland	-0,2*

Der Außenhandel der Europäischen Union: Ergebnisse bis November 1994

In den ersten elf Monaten des Jahres 1994 stiegen die Ausfuhren der Europäischen Union etwas stärker als die Einfuhren (Differenz: 0,4 Prozentpunkte). Im gleichen Zeitraum lag die Zuwachsrate der Einfuhren der Vereinigten Staaten und Japans um 3,8 bzw. 3,3 Prozentpunkte über der der Ausfuhren.

Im November 1994 erzielte die Europäische Union einen Handelsbilanzüberschuß von 0,7 Mrd. ECU gegenüber 1,4 Mrd. ECU im gleichen Vorjahresmonat. Dennoch verringerte sich das kumulierte Defizit für Januar-November von 4,9 Mrd. ECU 1993 auf 3,6 Mrd. ECU 1994.

Die Einfuhren holten in den ersten elf Monaten des Jahres 1994 gegenüber den Ausfuhren auf. Während nämlich die Extra-EU-Ausfuhren praktisch im gleichen Umfang zunahmen wie im Vorjahr (+11,5 %), weiteten sich die Einfuhren, die 1993 rückläufig waren, um 11,1 % aus.

Das Handelsbilanzdefizit der Vereinigten Staaten erhöhte sich zwischen Januar und November 1994 gegenüber dem Vergleichszeitraum des Vorjahres um 27,4 Mrd. ECU auf 138,1 Mrd. ECU (165 Mrd. USD).

Die Einfuhren nahmen zwischen den ersten elf Monaten des Jahres 1993 und dem gleichen Zeitraum des Jahres 1994 stärker zu als die Ausfuhren (in Ecu +12,7 % gegenüber +8,9 %, in US-Dollar +14 % gegenüber +9,9 %).

Der Handelsbilanzüberschuß Japans stieg in den ersten elf Monaten des Jahres 1994 gegenüber dem Vergleichszeitraum des Vorjahres um 1,4 Mrd. ECU auf 93,6 Mrd. ECU.

Gemessen in Ecu, waren die Veränderungsrate sowohl bei den Ausfuhren als auch bei den Einfuhren deutlich positiv: +8,2 % bzw. +11,5 %. In Yen betrug sie dagegen aufgrund des Wertgewinns der japanischen Währung (gegenüber dem Ecu +7,8 %) +0,7 % bzw. -0,2 %.

In den ersten elf Monaten des Jahres 1994 verzeichneten Deutschland und Italien von allen EU-Mitgliedstaaten die höchsten Überschüsse im Extra-EU-Handel, das Vereinigte Königreich und die Niederlande dagegen die größten Defizite.

In der Zeit von Januar bis November 1994 erzielt Deutschland nicht nur den höchsten Extra-EU-Überschuß aller EU-Mitgliedstaaten (23,2 Mrd. ECU), sondern auch die deutlichste Verbesserung des Handelsbilanzsaldo gegenüber dem entsprechenden Vorjahreszeitraum (+7,3 Mrd. ECU). Die deutschen Ausfuhren nahmen im Vergleich zu den Monaten Januar-November 1993 um 12,7 %, die Einfuhren um 8,6 % zu.

Die Ausfuhren Italiens stiegen während der ersten elf Monate des Jahres 1994 im Vergleich zum entsprechenden Vorjahreszeitraum stärker als die Einfuhren (+11,3 % gegenüber +8,9 %).

Der italienische Handelsbilanzüberschuß erhöhte sich um 2,2 Mrd. ECU, von 8,7 Mrd. ECU auf 10,9 Mrd. ECU.

Am stärksten verschlechterte sich zwischen Januar-November 1994 und dem Vergleichszeitraum des Vorjahres der Handelsbilanzsaldo der Niederlande. Ihr Extra-EU-Defizit stieg um 9,1 Mrd. ECU auf 20,5 Mrd. ECU und war damit höher als in allen anderen EU-Staaten.

Dies ist darauf zurückzuführen, daß die niederländischen Extra-EU-Einfuhren, zu denen auch Waren zählen, die über niederländische Häfen in die Union gelangen und dann an andere Mitgliedstaaten geliefert werden, in den ersten elf Monaten des Jahres 1994 sehr stark zunahmen (+31,2 %), während die Steigerungsrate der Ausfuhren leicht hinter dem EU-Durchschnitt zurückblieb (+11 %).

Das Vereinigte Königreich verzeichnete in den Monaten Januar bis November 1994 von allen EU-Mitgliedstaaten das zweitgrößte Handelsbilanzdefizit (18,9 Mrd. ECU).

Im Vergleich zum entsprechenden Vorjahreszeitraum weitete es sich leicht aus (um 0,7 Mrd. ECU), obwohl die Ausfuhren stärker zunahmen als die Einfuhren (Differenz: 1,1 Prozentpunkte).

Der Extra-EU-Handelsbilanzüberschuß Frankreichs erhöhte sich zwischen dem genannten Zeitraum des Jahres 1993 und dem entsprechenden Zeitraum des Jahres 1994 um 1,4 Mrd. ECU, von 7,3 Mrd. ECU auf 8,7 Mrd. ECU.

Sowohl bei den Einfuhren als auch bei den Ausfuhren lagen die Zuwachsraten mit +6,8 % bzw. +8,2 % deutlich unter dem EU-Durchschnitt.

Die BLWU und Griechenland verzeichneten zwischen Januar und November 1994, verglichen mit dem gleichen Vorjahreszeitraum, von allen EU-Mitgliedstaaten den stärksten Anstieg ihrer Extra-EU-Ausfuhren (+20,6 % bzw. +17,9 %).

Während sich die Einfuhren der BLWU gegenüber den ersten elf Monaten des Jahres 1993 deutlich ausweiteten (+22,3 %), war Griechenland der einzige Mitgliedstaat, dessen Einfuhren abnahmen (-11,8 %).

Die Handelsbilanzüberschüsse Dänemarks und Irlands gingen im Zeitraum Januar-November 1994, verglichen mit dem entsprechenden Vorjahreszeitraum, leicht zurück, nämlich auf 2,2 Mrd. ECU bzw. 0,7 Mrd. ECU.

Die Handelsströme der beiden Länder entwickelten sich in den ersten elf Monaten des Jahres 1994 sehr dynamisch. Die dänischen Einfuhren und Ausfuhren erhöhten sich gegenüber dem Vergleichszeitraum des Jahres 1993 um 16,2 % bzw. 13 %, die irischen um 22,3 % bzw. 15,5 %.

Spanien und Portugal verzeichneten während des betrachteten Zeitraums einen leichten Anstieg ihres Handelsbilanzdefizits (um 0,2 Mrd. ECU bzw. 0,1 Mrd. ECU).

Die Ausfuhren der beiden Länder nahmen in den ersten elf Monaten des Jahres 1994 stärker zu als ihre Einfuhren (Differenz: +1,1 % bzw. +3,4 %).

Eurostatistics - data for short-term economic analysis is a monthly publication aimed at providing, as rapidly as possible, the latest statistical data on the European Community as a whole (EUR12), each Member State, the United States and Japan.

Eurostatistics does not present all the statistics held by Eurostat, but a selection of the most relevant series on the economic situation.

Speed of publication and punctuality are the main features of this publication; that is why it is deliberately streamlined and does not contain any methodological notes, which are given in Eurostat's specialized publications.

The data published in *Eurostatistics* are taken from Eurostat's on-line database, New Cronos. New Cronos includes old Cronos and Regio, both represented not by chronological series but through multi-dimensional tables. New Cronos is a dissemination product directly from Eurostat's Reference Environment. The data are also available via the Commission host Eurobases in the Eurocron database.

EXCHANGE RATES: Dollar stages a recovery

The US dollar staged a long-awaited recovery in mid-May, having reached record lows against the German mark and Japanese yen in April. The recovery appeared short-lived, however, as the dollar subsequently lost much of its earlier gains, on market fears that the US economy may not achieve a 'soft landing'. From lows of DM 1.35 and 81.1 yen on 19 April, the dollar had firmed to DM 1.38 and 83.1 yen by 26 May (London closing rates).

With the help of a stronger dollar, other currencies also strengthened against the DM. Sterling recovered sharply from a record low of under DM 2.18 on 9 May, but failed to hang on to its gains, falling back to DM 2.22 at the close on 26 May.

The French franc was affected by uncertainty over the outcome of the second round of the presidential elections on 7 May. Following the election of Jacques Chirac the franc rallied, but then fell back, closing in London on 26 May at FF 3.525. The Belgian franc, meanwhile, showed little reaction to elections in Belgium held on 21 May. A week before the elections, official short-term interest rates were cut by 0.25%.

Elsewhere in the EMS, the Spanish peseta continued to recover against the DM. By late May, both the peseta and Portuguese escudo were comfortably within their ERM bands. The Irish punt was the weakest currency in the system, but its position was nevertheless comfortable.

Italian official interest rates were raised by 0.75% on 26 May, in reaction to evidence of higher inflation. The discount rate was therefore increased to 9%, and the Lombard rate to 10.5%. Lira weakness has been a factor behind the increase in inflation. Nevertheless, the lira had recovered somewhat in recent weeks from a lowpoint of LIT 1264 against the DM on 19 April, to LIT 1189 on 26 May.

Both the Swedish krona and Finnish markka, two other currencies which are outside the ERM, were slightly firmer against the DM during May.

GOVERNMENT BOND YIELDS: widespread rally in May 1995

Bond markets staged a widespread rally in May, in reaction to signs that economic growth and inflation prospects were weaker than previously expected in several countries, including the US, the UK, Germany, and Japan. Foreign investor interest in the US bond market was also supported by the stronger dollar.

Led by the US market, government bond yields fell in all other major markets, including throughout Europe. In the month to 26 May, the yield on German 10-year bonds (Bunds) fell 0.3 percentage points to 6.7%. Meanwhile, the yield on French OATs and UK gilts (10-year) fell to 7.4% and 7.9%, respectively, narrowing the differential with Bunds. However, the higher-yielding bonds (including those of Spain, Sweden and Italy) recorded the strongest gains.

Government bond yields have generally been falling since January, following a sharp downturn in bond markets (and therefore rising yields) in 1994. The fall in yields only partly reverses the increases which occurred in 1994.

MONEY SUPPLY: trends remain generally subdued

Trends in money supply growth generally give little indication of rising inflationary pressure. Annual growth rates in broad money measures for several EU countries remained little above zero, or else negative, in February.

M3 growth in France has been gradually accelerating in recent months, reaching 3.6% in the year to February, but this follows a period of several months of negative change in 1994. The target for 1995 growth set by the Bank of France is 5%.

The UK's broad money measure, M4, has also been rising this year on an annual comparison, but remains within the lower half of its 3-9% monitoring range. The narrow measure M0, however, still exceeds its 0-4% range.

German money supply growth (M3) has been decelerating for more than a year, one factor behind the Bundesbank's decision to cut interest rates at the end of March.

Broad money growth (M3) in Greece has been running at around 20% in recent months, easily the highest rate in the EU, and well above target.

FOREIGN OFFICIAL RESERVES: German reserves edge lower

The downward trend in Germany's official foreign exchange reserves continued in February, falling to 62.1 billion ecu. This is lowest level since the crisis in the EMS exchange rate mechanism erupted in July / August 1993, when the level of reserves soared to over 90 billion ecu.

Generally, the trend in official reserves among EU member states has been downwards in recent months, when valued in ecu. This may be partly explained by valuation effects, however, as the US dollar (the largest single component of foreign exchange reserves) has tended to weaken.

Apart from the three newest EU members (Austria, Finland and Sweden), the only other country experiencing a significant net inflow of reserves in recent months has been Greece, where high interest rates have attracted foreign capital. In January official reserves in Greece reached 11.8bn ecu, more than 50% higher than a year earlier.

EUROPEAN UNION ANNUAL INFLATION: unchanged at 3.3% in April 1995

European Union of Fifteen annual inflation was a provisional 3.3% in April 1995, unchanged from March. In April last year it was 3.2%.

Finland had the lowest rate - 1.5% - with France next at 1.6% (provisional). For the first time in 22 years the Greek rate fell below 10%. Only other countries above the European Union of Fifteen average were Portugal (4.6%), Italy and Spain (both 5.2%). Sweden and the United Kingdom, at 3.3%, were right on the average.

April rates in Member States, in ascending order of inflation, with corresponding figures for a year earlier, are as follows:

	April 95	April 94		April 95	April 94
	April 94	April 93		April 94	April 93
Finland	1.5%	0.2%	Austria	2.6% ^E	3.0%
France	1.6% ^p	1.7%	Sweden	3.3%	1.8%
Belgium	1.7%	2.4%	United Kingdom	3.3%	2.6%
Luxembourg	2.2%	2.1%	Portugal	4.6%	6.0%
Germany*	2.3%	3.1%	Italy	5.2% ^p	4.1%
Denmark	2.3% ^E	2.0%	Spain	5.2%	5.0%
Netherlands	2.3%	2.8%	Greece	9.9%	10.4%
Ireland**	2.5%	1.7%			
EUR 15	3.3% ^p	3.2%			

* The CPI for Germany continues to reflect the geographical borders prior to 3 October 1990.

Inflation in the new Länder in April was 2% compared to April 1994

** Feb 95 / Feb 94 and Feb 94 / Feb 93

^E Eurostat estimate, data not available

UNEMPLOYMENT: European Union of Fifteen unemployment - 11% January to April 1995

Eurostat estimates European Union of Fifteen seasonally-adjusted unemployment in April 1995 at 11%. Estimates suggest this was also the level in the first three months of the year. In April last year it was 11.4%.

The rate in most Member States was fairly stable from January to April 1995. However, it increased from 12% to 12.4% in Italy and 7.5% to 8% in Portugal, and fell from 23.2% to 22.8% in Spain (still the European Union of Fifteen's highest) and 9.3% to 8.9% (March 1995) in Denmark. Luxembourg had the lowest rate in April 1995 at 3.8%.

Unemployment of the under-25s (21.2%) is nearly twice the overall European Union of Fifteen average. However, in Germany, at 7.9% in April, it was actually lower than the total figure of 8.2%. But in Italy and Finland it was around 34% and in Spain still 42.2% despite falling from over 45% a year before.

Eurostat estimates that around 18.2 million people were unemployed in the European Union of Fifteen in April. This is a seasonally-adjusted figure in line with ILO criteria.

Note

The unemployment rate and numbers of unemployed are estimated according to ILO recommendations after taking account of the differences between national methods of recording unemployment.

INDUSTRIAL PRODUCTION: European Union of Fifteen industrial output still rising

The trend of European Union of Fifteen industrial production rose by 0.9% in December to February compared to the three previous months.

Eurostat comments that output continues to rise with no sign of levelling in all Member States except Greece, Portugal and the Netherlands.

Recovery in the United States is also firm with a rise of 1.4% over the same period; in Japan the rise was 0.6%.

Figures (in %) for Member States, where available, are (* = estimate):

EUR 15	0.9	Italy	1.2
Denmark	2.2	France	0.8
Spain	1.6	United Kingdom	0.6
Austria	1.5	Netherlands	-0.3
Finland	1.4	Greece	-0.2*

EUROPEAN UNION EXTERNAL TRADE : Results until November 1994

European Union's exports increased slightly more than imports during the first eleven months of 1994 (+0.4 percentage points). In the same period imports of United States and Japan showed a rate of change larger than exports by 3.8 and 3.3 points respectively.

In November 1994 the European Union's(*) external trade balance recorded a surplus of ECU 0.7 billion compared to the ECU 1.4 billion registered in the same month of 1993. Nevertheless the cumulated deficit for January-November 1994 narrowed to ECU 3.6 billion from ECU 4.9 billion registered in the same period a year earlier.

The January-November 1993 and 1994 comparison shows that imports are gaining pace over exports. In fact, while the extra-EU exports increased at almost the same rate registered a year earlier (11.5%), the imports, after the negative result showed in 1993, grew by 11.1%.

From January to November 1994 the United States' trade deficit recorded an ECU 27.4 billion increase compared to the corresponding period a year earlier, reaching ECU 138.1 billion (US dollars 165 billion).

In ECU terms the imports' rate of change between the first eleven months of 1993 and 1994 was larger than the exports' one (12.7% against 8.9%); if measured in US dollars these figures were respectively 14% and 9.9%.

In the first eleven months of 1994 the Japanese trade surplus went up by ECU 1.4 billion compared to the same period in 1993 totalling ECU 93.6 billion.

In ECU terms the exports' and imports' rates of change were both largely positive: respectively 8.2% and 11.5%; while, due to the appreciation of the YEN (7.8 against the ECU), if measured in the Japanese currency the two flows registered less important performances (0.7% and -0.2%).

In the first eleven months of 1994 Germany and Italy showed the two largest extra-EU surpluses among the EU countries, while the Netherlands and the United Kingdom registered the most important deficits.

In the period January-November 1994 Germany registered both the largest extra-EU surplus among the EU member states (ECU 23.2 billion) and the most important improvement compared to the same period a year earlier (ECU 7.3 billion). German exports showed a 12.7% increase over the corresponding period of 1993, while imports grew by 8.6%.

During the first eleven months of 1994 the Italian exports increased faster than imports compared to the same period a year earlier, the growth rate being respectively 11.3% and 8.9%.

The Italian trade balance improved its surplus by ECU 2.2 billion, reaching ECU 10.9 billion, from ECU 8.7 billion recorded in 1993.

The Dutch extra-EU deficit recorded the most important deterioration between January-November 1993 and 1994 (ECU 9.1 billion) and became the largest among the EU countries (ECU 20.5 billion).

As a matter of fact the Netherlands' extra-EU imports – which include goods entering the Union via Dutch harbours and then delivered to other member states – grew very fast in the first eleven months of 1994 (31.2%) while the exports' rate of change was slightly under the EU average (11%).

In the period January-November 1994 the United Kingdom was the EU country that experienced the second largest trade deficit which reached ECU 18.9 billion.

The UK's trade position showed a slight deterioration (ECU 0.7 billion) with reference to the same period of 1993 in spite of a positive gap between the exports' and imports' growth rates (+1.1 percentage points).

France's extra-EU trade surplus improved by ECU 1.4 billion between the above mentioned period in 1994 and a year earlier (from ECU 7.3 billion to ECU 8.7 billion).

The rates of change of both imports and exports were well under the EU average: respectively 6.8% and 8.2%.

During the period January to November 1994 the extra-EU exports of the BLEU and Greece recorded the largest rates of growth among the EU member states compared to the same period a year earlier (respectively 20.6% and 17.9%).

On the imports side while the BLEU registered a dynamic percentage change over January-November 1993 (22.3%), Greece was the only member state which experienced a negative rate of growth (-11.8%).

From January to November 1994 the external trade surpluses of Denmark and Ireland slightly reduced compared to the same period a year earlier: respectively to ECU 2.2 billion and ECU 0.7 billion.

In the first eleven months of 1994 the trade flows of both countries were very dynamic: Danish imports and exports grew respectively by 16.2% and 13% over January-November 1993, while the corresponding rates for Ireland were 22.3% and 15.5%.

Between the periods January-November 1993 and 1994 Spain and Portugal slightly worsened their trade balances compared to the corresponding period a year earlier: the extra-EU deficits rose respectively by ECU 0.2 billion and ECU 0.1 billion.

During the first eleven months of 1994 exports of both countries increased more than imports respectively by 1.1 and 3.4 percentage points.

(*) Due to frequent revisions of the monthly figures sent by the member states, the data shown are not necessarily identical to those presented in the previous publications.

Eurostatistiques - Données pour l'analyse de la conjoncture est une publication mensuelle qui a pour but de fournir dans les meilleurs délais les données statistiques les plus récentes pour la Communauté européenne en tant qu'ensemble (EUR12), pour les pays membres ainsi que pour leurs principaux partenaires extra-communautaires (États-Unis d'Amérique et Japon).

Eurostatistiques ne publie pas d'une manière exhaustive toutes les statistiques disponibles auprès d'Eurostat, mais les plus importantes parmi celles-ci.

Cette publication se veut rapide et facilement maniable. Pour cette raison, elle ne comporte pas de notes méthodologiques, qui sont par ailleurs disponibles dans les publications spécialisées d'Eurostat.

Les données publiées dans *Eurostatistiques* proviennent de la base de données New Cronos. New Cronos se compose de l'ancien Cronos et de Regio, représentés non plus sous forme de séries chronologiques mais de tableaux multidimensionnels. New Cronos constitue en fait un des produits de diffusion émanant directement de l'environnement de Référence. Ces données sont aussi disponibles dans la base de données Eurocron, accessible par l'intermédiaire du serveur Eurobases de la Commission.

TAUX DE CHANGE: redressement du dollar

Le redressement attendu de longue date du dollar américain est intervenu à la mi-mai après que la devise américaine eut enregistré en avril ses cours historiquement les plus bas vis-à-vis du mark allemand et du yen japonais. Ce redressement a cependant été de courte durée, la devise américaine reperdant une bonne partie de ce qu'elle avait gagné en raison des craintes nées sur le marché concernant une éventuelle incapacité de l'économie américaine à réussir son «atterrissage en douceur». Coté à 1,35 DM et 81,1 yens le 19 avril, le dollar valait 1,38 DM et 83,1 yens le 26 mai (cours de clôture à Londres).

Aidées par un dollar fort, d'autres devises se sont renforcées par rapport au DM. Ainsi, la livre sterling s'est sensiblement renchérie par rapport à son cours le plus bas enregistré le 9 mai (moins de 2,18 DM); la devise britannique n'a cependant pas été en mesure de conserver ses gains, retombant à 2,22 DM à la clôture du 26 mai.

Le franc français a été affecté par l'incertitude liée aux résultats du second tour des élections présidentielles tenu le 7 mai. Une fois connue l'élection de Jacques Chirac, le franc s'est redressé pour retomber ensuite, clôturant le 26 mai à Londres à 3,525 FF pour 1 DM. Le franc belge, par contre, n'a été que faiblement influencé par les élections belges du 21 mai. Une semaine avant les élections, les taux d'intérêt officiels à court terme avaient été diminués de 0,25 %.

En ce qui concerne les autres devises du SME, on constate que la peseta espagnole poursuit son redressement vis-à-vis du mark allemand. A la fin du mois de mai, tant la peseta que l'escudo portugais se situaient à un niveau confortable à l'intérieur de leurs marges de fluctuation au sein du MTC. Bien qu'apparaissant comme la devise la plus faible du système, la livre irlandaise n'en occupe pas moins une position satisfaisante.

En Italie, les taux d'intérêt officiels ont été relevés de 0,75 % le 26 mai dans un contexte d'inflation à la hausse. Le taux d'escompte est ainsi passé à 9 % et le taux Lombard à 10,5 %. Un des éléments à l'origine de cette augmentation de l'inflation a été la faiblesse de la lire qui s'est cependant redressée quelque peu ces dernières semaines passant de 1.264 LIT pour 1 DM le 19 avril à 1.189 LIT le 26 mai.

Tant la couronne suédoise que le mark finlandais, deux autres devises qui ne participent pas au MTC, se sont légèrement affermies vis-à-vis du DM en mai.

RENDEMENT DES OBLIGATIONS D'ÉTAT: reprise générale du marché des obligations en mai

Les marchés des obligations ont enregistré une reprise générale en mai, certains indices ayant donné à penser que la croissance économique et les perspectives inflationnistes seraient moins importantes que prévu dans plusieurs pays, notamment les États-Unis, le Royaume-Uni, l'Allemagne et le Japon. L'intérêt des investisseurs étrangers pour le marché obligataire américain a également été conforté par la vigueur du dollar.

Emboîtant le pas au marché américain, le rendement des obligations d'État a baissé sur tous les autres principaux marchés, notamment en Europe. Pour la période du 1^{er} au 26 mai, le rendement des obligations allemandes à 10 ans (Bunds) a diminué de 0,3 % à 6,7 %. Dans le même temps, le rendement des OAT françaises et des gilts britanniques (10 ans) a également diminué pour s'établir respectivement à 7,4 % et 7,9 %, réduisant ainsi l'écart avec les Bunds. À l'inverse, les augmentations les plus importantes sont à mettre à l'actif des obligations à rendement élevé, notamment celles émises en Espagne, en Suède et en Italie.

D'une manière générale, le rendement des obligations d'État est orienté à la baisse depuis janvier en raison du fléchissement sensible du marché des obligations et de la hausse corollaire des rendements observés en 1994. Cependant, la baisse des rendements observée cette année n'annule que partiellement la hausse enregistrée en 1994.

MASSE MONÉTAIRE: tendances généralement peu contrastées

L'évolution de la croissance de la masse monétaire ne fournit généralement que peu d'indices d'une augmentation de la pression inflationniste. En février, les taux d'accroissement annuel des agrégats monétaires au sens large se sont maintenus légèrement au-dessus de zéro dans plusieurs pays de l'UE et ont enregistré des valeurs négatives ailleurs.

En France, la croissance de M3 s'est progressivement accélérée ces derniers mois pour atteindre 3,6 % pour la période février 1994-février 1995; toutefois cette hausse intervient après plusieurs mois d'évolution négative en 1994. L'objectif de croissance pour 1995 fixé par la Banque de France est de 5 %.

Au Royaume-Uni, l'agrégat M4, s'il a également enregistré une augmentation en variation annuelle, n'en continue pas moins de se situer dans la moitié inférieure de l'objectif monétaire de 3-9 %. La mesure de la monnaie au sens étroit, M0, par contre, se situe toujours au-dessus de l'objectif de 0-4 %.

En Allemagne, la croissance de la masse monétaire (M3) est en baisse depuis plus d'une année, cet élément constituant un des facteurs à l'origine de la décision de la Bundesbank de réduire ses taux d'intérêt à la fin du mois de mars.

En Grèce, le taux d'accroissement de la monnaie au sens large (M3) s'est élevé à environ 20 % ces derniers mois, ce qui constitue de loin le taux le plus élevé au sein de l'UE, dépassant largement l'objectif fixé.

RÉSERVES OFFICIELLES DE CHANGE: baisse des réserves allemandes

La tendance à la baisse des réserves officielles de change de l'Allemagne s'est poursuivie en février. 62,1 milliards d'écus, celles-ci se situent à leur niveau le plus bas depuis la crise du mécanisme des taux de change du SME survenue en juillet/août 1993, lorsque le niveau de ces réserves avait dépassé les 90 milliards d'écus.

D'une manière générale, les réserves officielles des États membres de l'UE exprimées en écus ont affiché une tendance à la baisse ces derniers mois. Cette baisse peut cependant s'expliquer en partie par les méthodes d'évaluation, le dollar américain (qui constitue la composante principale des réserves de change) ayant eu tendance à s'affaiblir.

À l'exception des trois nouveaux États membres de l'UE (Autriche, Finlande et Suède), le seul autre pays à avoir enregistré d'importantes entrées nettes de réserves ces derniers mois est la Grèce dont les taux d'intérêt élevés ont attiré les capitaux étrangers. En janvier, les réserves officielles de ce pays s'élevaient à 11,8 milliards d'écus, en augmentation de plus de 50 % par rapport à un an plus tôt.

INFLATION ANNUELLE DANS L'UNION EUROPÉENNE : inchangée à 3,3 % en avril 1995

L'inflation annuelle dans l'Union européenne des Quinze s'élève à 3,3 % (taux provisoire) en avril 1995. En avril 1994, elle était de 3,2 %.

La Finlande détient le taux le plus faible (1,5 %); la France arrive en deuxième position avec 1,6 % (provisoire). Pour la première fois en 22 ans, le taux d'inflation de la Grèce est passé en-dessous des 10 %. Les seuls autres pays au-dessus de la moyenne de l'Union européenne des Quinze sont le Portugal (4,6 %), l'Italie et l'Espagne (toutes deux à 5,2 %). La Suède et le Royaume-Uni se situent exactement dans la moyenne avec 3,3 %.

Voici les taux enregistrés en avril 1995, classés par ordre croissant, pour chaque État membre ainsi que les chiffres correspondants pour l'année précédente :

	avril 95 avril 94	avril 94 avril 93		avril 95 avril 94	avril 94 avril 93
Finlande	1,5 %	0,2 %	Autriche	2,6 % ^E	3,0 %
France	1,6 % ^p	1,7 %	Suède	3,3 %	1,8 %
Belgique	1,7 %	2,4 %	Royaume-Uni	3,3 %	2,6 %
Luxembourg	2,2 %	2,1 %	Portugal	4,6 %	6,0 %
Allemagne*	2,3 %	3,1 %	Italie	5,2 % ^p	4,1 %
Danemark	2,3 % ^E	2,0 %	Espagne	5,2 %	5,0 %

p Provisoire
E estimation Eurostat, donnée non disponible

CHOMAGE: Le chômage dans l'Union européenne des Quinze se maintient à 11 % de janvier à avril 1995

Le chômage dans l'Union européenne des Quinze, corrigé des variations saisonnières, s'élève à 11 % en avril 1995. Les estimations indiquent que le taux était également de 11 % durant les trois premiers mois de l'année. En avril 1994, le taux était de 11,4 %.

De janvier à avril 1995 le taux de chômage a été assez stable dans la plupart des États membres. Cependant, il est passé de 12 % à 12,4 % en Italie et de 7,5 % à 8 % au Portugal. Il a diminué en Espagne où il est assé de 23,2 % à 22,8 % (ce taux reste toutefois le plus élevé de l'Union européenne des Quinze) et au Danemark (de 9,3 % à 8,9 % (chiffre de mars 1995). Le Luxembourg, avec 3,8 %, enregistre le taux le plus bas en avril 1995.

Le taux de chômage des moins de 25 ans (21,2 %) représente presque le double du taux de chômage global dans l'Union européenne des Quinze. Cependant, l'Allemagne affiche un taux de chômage des jeunes (7,9 %) inférieur à celui pour l'ensemble de la population (8,2 %). Par contre, le chômage des jeunes avoisine les 34 % en Italie et en Finlande et s'élève encore à 42,2 % en Espagne bien que ce pays enregistre une baisse par rapport aux 45,5 % observés en avril 1994.

Eurostat estime qu'environ 18,2 millions de personnes sont au chômage dans l'Union européenne des Quinze au mois d'avril 1995. Ce chiffre, corrigé des variations saisonnières, est établi en accord avec les critères du Bureau International du Travail (BIT).

Remarque

Le taux de chômage et le nombre de chômeurs sont estimés selon les recommandations du BIT après correction des différences entre les méthodes nationales de recensement du chômage.

PRODUCTION INDUSTRIELLE: La production industrielle dans l'Union européenne des Quinze est toujours en hausse

La tendance de la production industrielle dans l'Union européenne des Quinze est en hausse: +0,9 % de décembre à février par rapport aux trois mois précédents.

Eurostat indique que, dans tous les États membres sauf en Grèce, au Portugal et aux Pays-Bas, la production continue de progresser sans montrer aucun signe de fléchissement.

Aux États-Unis, la reprise est également solide avec une progression de 1,4 % de décembre à janvier par rapport aux trois mois précédents. Au Japon, la hausse est de 0,6 %.

Voici les chiffres (en %) pour les États membres pour lesquels des données sont disponibles (* = estimation):

EUR 15	0,9	Italy	1,2
Danemark	2,2	France	0,8
Espagne	1,6	Royaume-Uni	0,6
Autriche	1,5	Pays-Bas	-0,3
Finlande	1,4	Grèce	-0,2*

COMMERCE EXTÉRIEUR DE L'UNION EUROPÉENNE: Résultats jusqu'à novembre 1994

Les exportations de l'Union européenne ont augmenté un peu plus que les importations au cours des onze premiers mois de 1994 (+0,4 points de pourcentage). Au cours de la même période, l'écart entre les taux de variation des importations et des exportations pour les États-Unis et le Japon s'est établi à 3,8 et 3,3 points respectivement.

En novembre 1994, le commerce extérieur de l'Union européenne(*) a enregistré un excédent commercial de 0,7 milliard d'écus contre 1,4 milliard d'écus pour le même mois en 1993. Cependant, le déficit cumulé pour janvier-novembre 1994 a été ramené à 3,6 milliards d'écus alors qu'il était de 4,9 milliards d'écus un an auparavant.

La comparaison janvier-novembre 1993 et 1994 montre que les importations ont augmenté davantage que les exportations. En effet, si les exportations extra-UE ont augmenté à peu près au même rythme que l'année précédente (11,5 %), les importations, après le résultat négatif enregistré en 1993, ont progressé de 11,1 %.

De janvier à novembre 1994, le déficit commercial des États-Unis a enregistré un accroissement de 27,4 milliards d'écus par rapport à la même période un an auparavant, atteignant 138,1 milliards d'écus (165 milliards USD).

En termes d'écus, le taux de variation des importations entre les onze premiers mois de 1993 et de 1994 a été plus important que celui des exportations (12,7 % contre 8,9 %); en USD, ces chiffres étaient respectivement de 14 % et 9,9 %.

(*) Les fréquentes révisions des chiffres mensuels communiqués par les États membres expliquent que les données indiquées ne correspondent pas nécessairement à celles figurant dans les publications antérieures.

Au cours des onze premiers mois de 1994, l'excédent commercial japonais a augmenté par rapport à la même période de 1993 de 1,4 milliard d'écus totalisant 93,6 milliards d'écus.

En termes d'écus, les taux de variation des exportations et des importations ont été l'un et l'autre largement positifs: respectivement 8,2 % et 11,5 %; en monnaie japonaise, du fait de l'appréciation du YEN (7,8 contre l'écu), les deux flux ont affiché des performances moins importantes (0,7 % et -0,2 %).

Au cours des onze premiers mois de 1994, parmi les pays de l'UE, l'Allemagne et l'Italie ont enregistré les deux plus forts excédents extra-UE, tandis que le Royaume-Uni et les Pays-Bas ont accusé les déficits les plus importants.

Au cours de la période janvier-novembre 1994, l'Allemagne a enregistré l'excédent extra-UE le plus important des États membres de l'UE (23,2 milliards d'écus) et la hausse la plus forte par rapport à la même période de l'année précédente (7,3 milliards d'écus). Les exportations allemandes ont augmenté de 12,7 % par rapport à la période correspondante de 1993, tandis que les importations se sont accrues de 8,6 %.

Au cours des onze premiers mois de 1994, les exportations italiennes ont progressé plus rapidement que les importations par rapport à la même période de l'année précédente, le taux de croissance étant respectivement de 11,3 % et de 8,9 %.

L'excédent de la balance commerciale italienne s'est accru de 2,2 milliards d'écus, atteignant 10,9 milliards d'écus contre 8,7 milliards en 1993.

Le déficit extra-UE néerlandais a enregistré la plus forte détérioration entre janvier-novembre 1993 et 1994 (9,1 milliards d'écus) occupant le premier rang des États membres de l'UE (20,5 milliards d'écus).

En effet, les importations extra-UE des Pays-Bas – y compris les marchandises destinées à d'autres États membres et transitant par les ports néerlandais – ont augmenté très rapidement au cours des onze premiers mois de 1994 (31,2 %) tandis que le taux de variation des exportations était légèrement inférieur à la moyenne UE (11 %).

Au cours de la période janvier-novembre 1994, le Royaume-Uni a, parmi les pays de l'UE, enregistré le deuxième déficit commercial qui s'est monté à 18,9 milliards d'écus.

La position commerciale du Royaume-Uni s'est légèrement détériorée (0,7 milliard d'écus) par rapport à la même période de 1993, même si le différentiel entre les taux de croissance des exportations et des importations était positif (+1,1 point de pourcentage).

L'excédent commercial extra-UE de la France s'est accru de 1,4 milliard d'écus entre la période susmentionnée de 1994 et la même période de l'année précédente (passant de 7,3 milliards d'écus à 8,7 milliards d'écus).

Tant les importations que les exportations ont enregistré des taux de variation nettement inférieurs à la moyenne UE: respectivement 6,8 % et 8,2 %.

Au cours de la période janvier-novembre 1994, le commerce extra-UE de l'UEBL et de la Grèce a enregistré les plus forts taux de croissance des États membres de l'UE comparé à la même période une année auparavant (respectivement 20,6 % et 17,9 %).

Quant aux importations, tandis que l'UEBL a enregistré une variation dynamique en pourcentage par rapport à la période de janvier-novembre 1993 (22,3 %), la Grèce a été le seul État membre à accuser un taux de variation négatif (-11,8 %).

Au cours de la période janvier-novembre 1994, les excédents de la balance commerciale du Danemark et de l'Irlande ont légèrement fléchi par rapport à la même période de l'année précédente: respectivement à 2,2 milliards d'écus et 0,7 milliard d'écus.

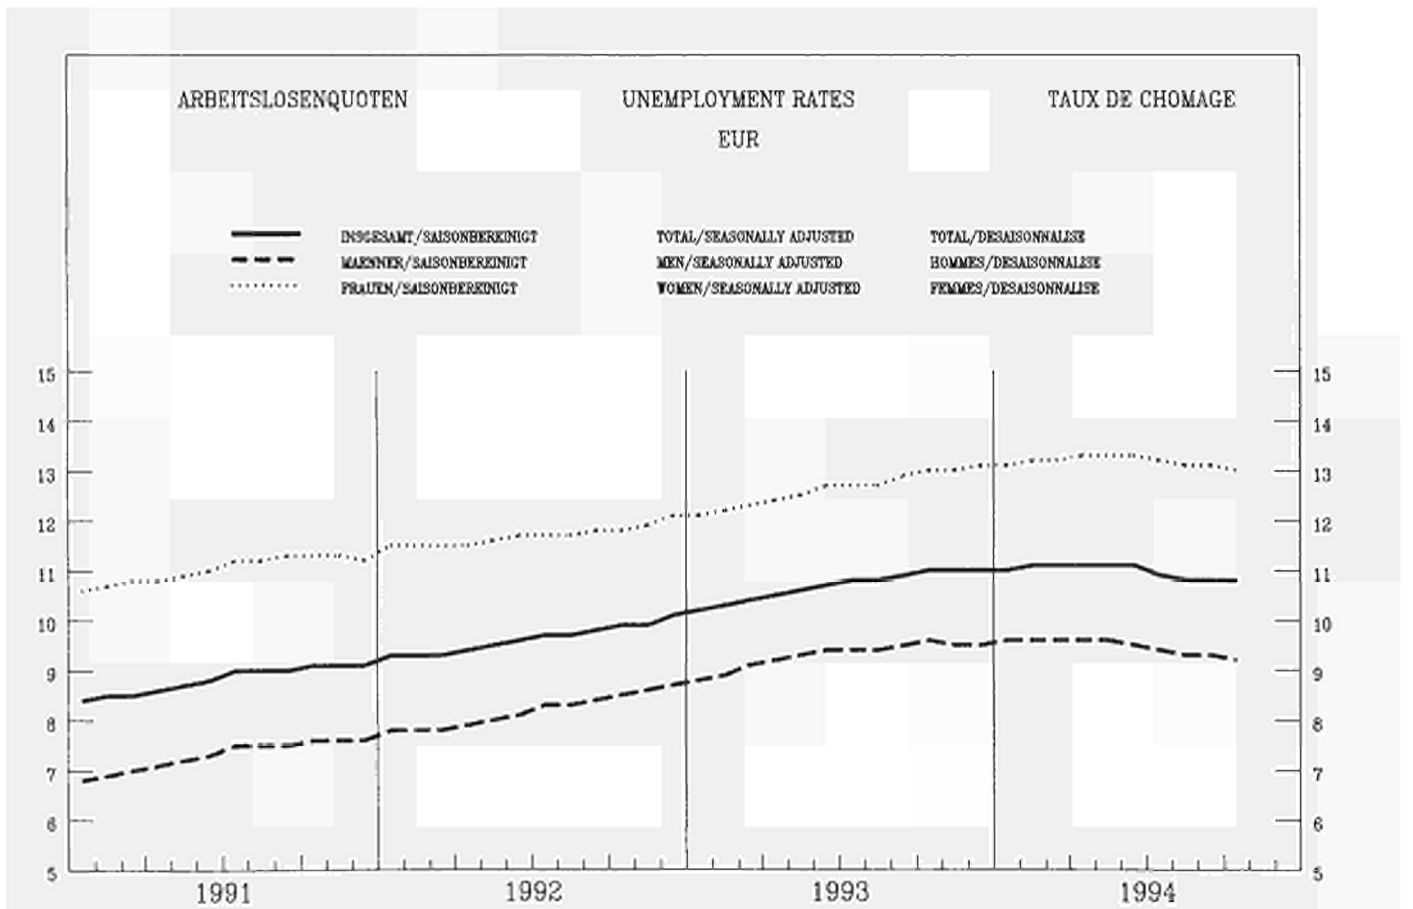

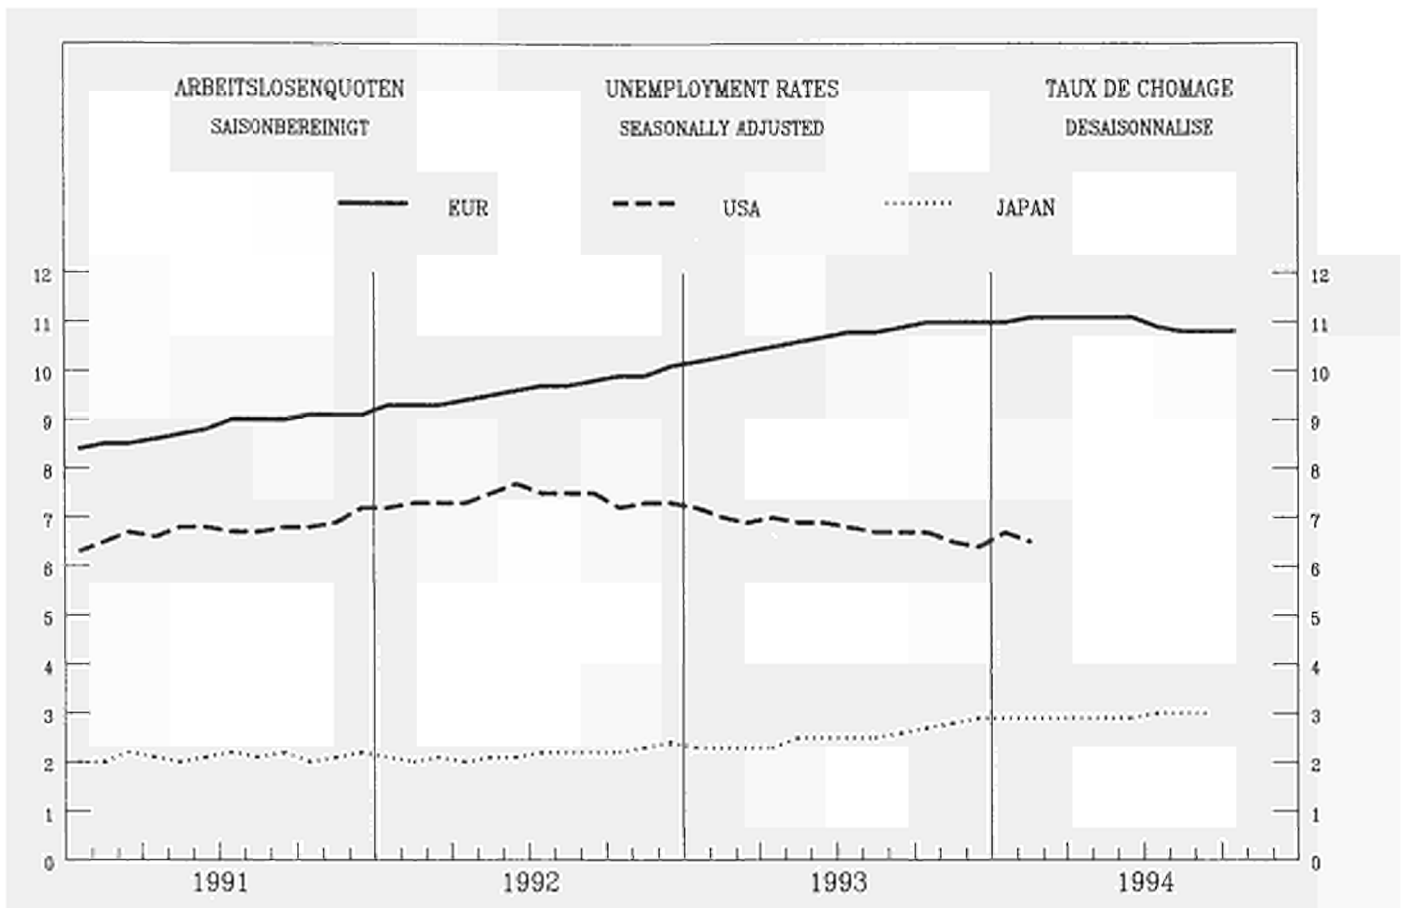

Au cours des onze premiers mois de 1994, les flux commerciaux des deux pays ont été très dynamiques: les importations et les exportations danoises ont augmenté respectivement de 16,2 % et 13 % par rapport à la période janvier-novembre 1993, tandis que les taux correspondants pour l'Irlande étaient de 22,3 % et 15,5 %.

Entre les périodes de janvier-novembre 1993 et 1994, l'Espagne et le Portugal ont enregistré une légère détérioration de leur balance commerciale par rapport à la période correspondante de l'année précédente: les déficits extra-UE ont augmenté respectivement de 0,2 milliard d'écus et 0,1 milliard d'écus.

Au cours des onze premiers mois de 1994, l'écart entre les taux de variation des exportations et des importations pour les deux pays s'est monté à respectivement 1,1 et 3,4 points de pourcentage.
