## Eurostat Data Shops:

### A personalised data retrieval service

In order to provide the greatest possible number of people with access to high-quality statistical information, Eurostat has developed an extensive network of Data Shops (¹).

Data Shops provide a wide range of **tailor-made services**:

- immediate information searches undertaken by a team of experts in European statistics;
- rapid and personalised response that takes account of the specified search requirements and intended use;
- a choice of data carrier depending on the type of information required.

Information can be requested by phone, mail, fax or e-mail.

(¹) See list of Eurostat Data Shops at the end of the publication.

## Internet:

### Essentials on Community statistical news

- Euro indicators: more than 100 indicators on the euro-zone; harmonized, comparable, and free of charge;
- About Eurostat: what it does and how it works;
- Products and databases: a detailed description of what Eurostat has to offer;
- Indicators on the European Union: convergence criteria; euro yield curve and further main indicators on the European Union at your disposal;
- Press releases: direct access to all Eurostat press releases.

For further information, visit us on the Internet at: [www.europa.eu.int/comm/eurostat/](http://www.europa.eu.int/comm/eurostat/)

---

A great deal of additional information on the European Union is available on the Internet.  
It can be accessed through the Europa server (<http://europa.eu.int>).

Eurostat is the Statistical Office of the European Communities. Its task is to provide the European Union with statistics at a European level, that allow comparisons to be made between countries and regions. Eurostat consolidates and harmonizes the data collected by the Member States.

To ensure that the vast quantity of accessible data is made widely available, and to help each user make proper use of the information, Eurostat has set up a publications and services programme.

This programme makes a clear distinction between general and specialist users and particular collections have been developed for these different groups. The collections *Press releases*, *Statistics in focus*, *Panorama of the European Union*, *Key indicators* and *Catalogues* are aimed at general users. They give immediate key information through analyses, tables, graphs and maps.

The collections *Methods and nomenclatures*, *Detailed tables* and *Studies and research* suit the needs of the specialist who is prepared to spend more time analysing and using very detailed information and tables.

All Eurostat products are disseminated through the Data Shop network or the sales agents of the Office for Official Publications of the European Communities. Data Shops are available in 12 of the 15 Member States as well as in Switzerland, Norway and the United States. They provide a wide range of services from simple database extracts to tailor-made investigations. The information is provided on paper and/or in electronic form via e-mail, on diskette or CD-ROM.

As part of the new programme Eurostat has developed its website. It includes a broad range of on-line information on Eurostat products and services, newsletters, catalogues, on-line publications as well as indicators on the euro-zone.

## PREFACE

*The quarterly economic accounts are an integral part of the system of national accounts, comprising a coherent set of transactions, accounts and balancing items. They form a consistent set of indicators that are rapidly available and provide an overall picture of recent economic activity. The quarterly accounts thus supply the basis for cyclical analysis of the economy.*

*The purpose of this publication is to provide a picture of trends in the economic cycle of the European Union as a whole, the Member States and its major trading partners. This picture is set in the international economic context and provides an overview of the short-term trends of the main economic indicators. The data are taken from the quarterly national accounts of each Member State that compiles such accounts and are harmonised so that the various economic situations can in fact be compared.*

*Every three months there is a special report on one particular aspect of the accounts, and certain aspects or topics that merit further analysis are highlighted.*

*It is Eurostat's hope that with this publication it can provide a more comprehensive response to the growing demand from users for quarterly national accounts data, with data relating to the main aggregates in the national accounts presented in a clear and organised manner.*

# 1. Introduction:

## General economic situation

Eurostat's estimates<sup>1</sup> concerning the third quarter of 1999 show that the GDP growth accelerated in the euro-zone<sup>2</sup> (EUR-11) as well as in the European Union as a whole (EU-15), both reaching 0.9%, as against 0.5% and 0.6% respectively in the previous quarter. These results are explained mainly by the growth in exports (+1.0 and +1.1 of the GDP variation in the euro-zone and the EU-15, respectively) whose effect was only partially offset by the rise in imports (-0.6 and -0.7 of the GDP variation, respectively). The other components of the domestic demand contributed in a positive way to the GDP growth, in particular the households' final consumption expenditure (+0.4 of the GDP variation in the zone euro and the EU-15) and the gross fixed capital formation (+0.3 of the GDP variation for both).

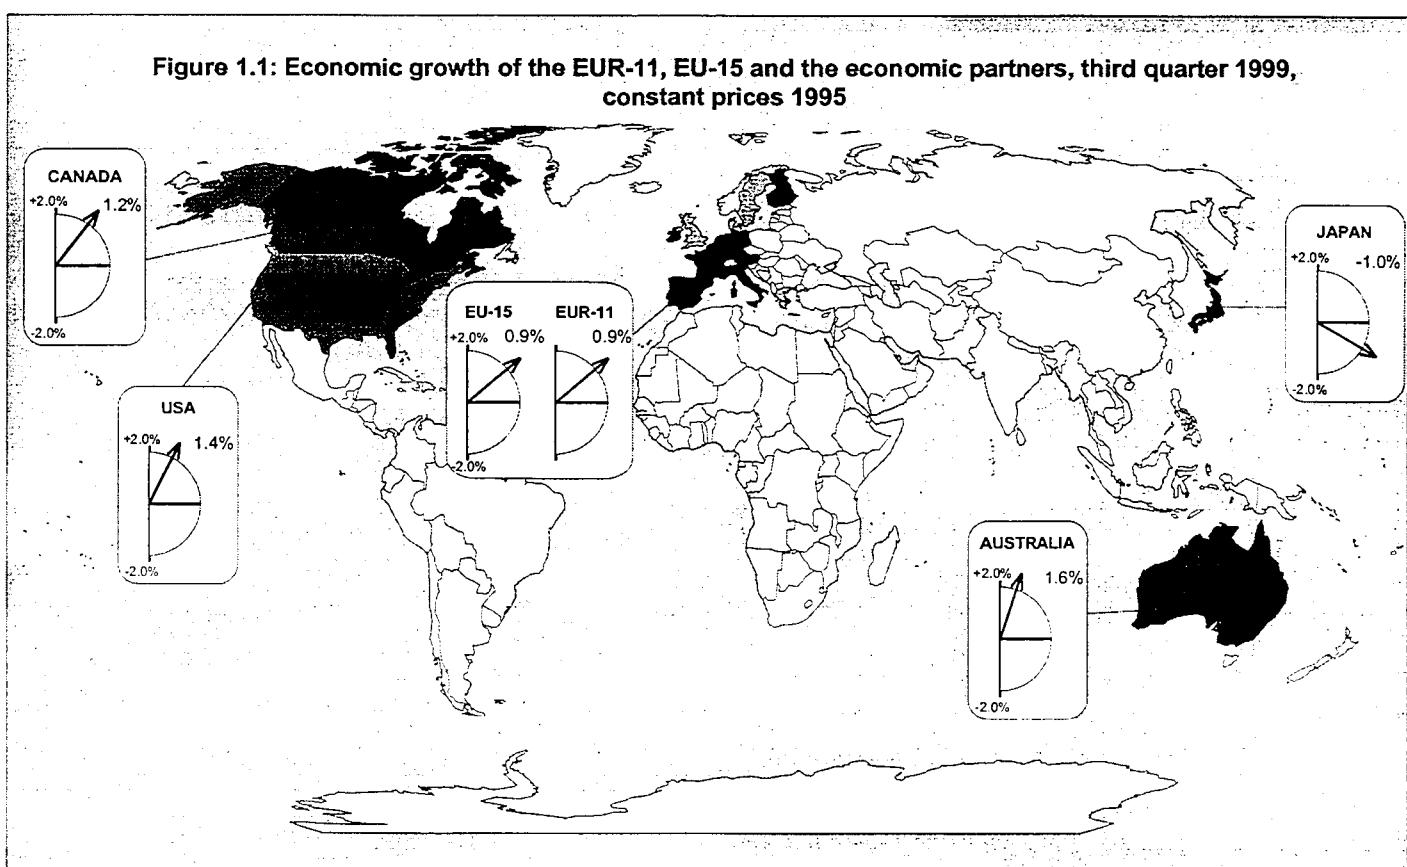

Among the main economic partners of the European Union, the economy of the United States strongly accelerated, recording a growth of +1.4% vs. +0.5% in the

previous quarter. A similar growth path was recorded in Canada (+1.2% against +0.8%), Australia (+1.6% against +0.1%) and Switzerland (+0.7% against +0.4%). Conversely, the Japanese GDP dropped (-1.0% against +1.0%). The G7 pace remained stable at +0.6%.

Compared with the third quarter of 1998, the GDP of the euro-zone and EU-15 increased by 2.2%; the United States recorded a 4.3% rise. Japan displayed a 1.0% growth.

During the third quarter of 1999, most EU Member States recorded an acceleration of the GDP growth: Austria (+1.7%), Belgium (+1.2%), France (+1.0%), Italy (+0.9%), Sweden (+0.9%), the United Kingdom (+0.8%), Denmark (+0.8%), the Netherlands (+0.8%), and Germany (+0.7%). Spain remained stable (+1.1%), while Finland was the only Member State recording a slow down (+0.7%).

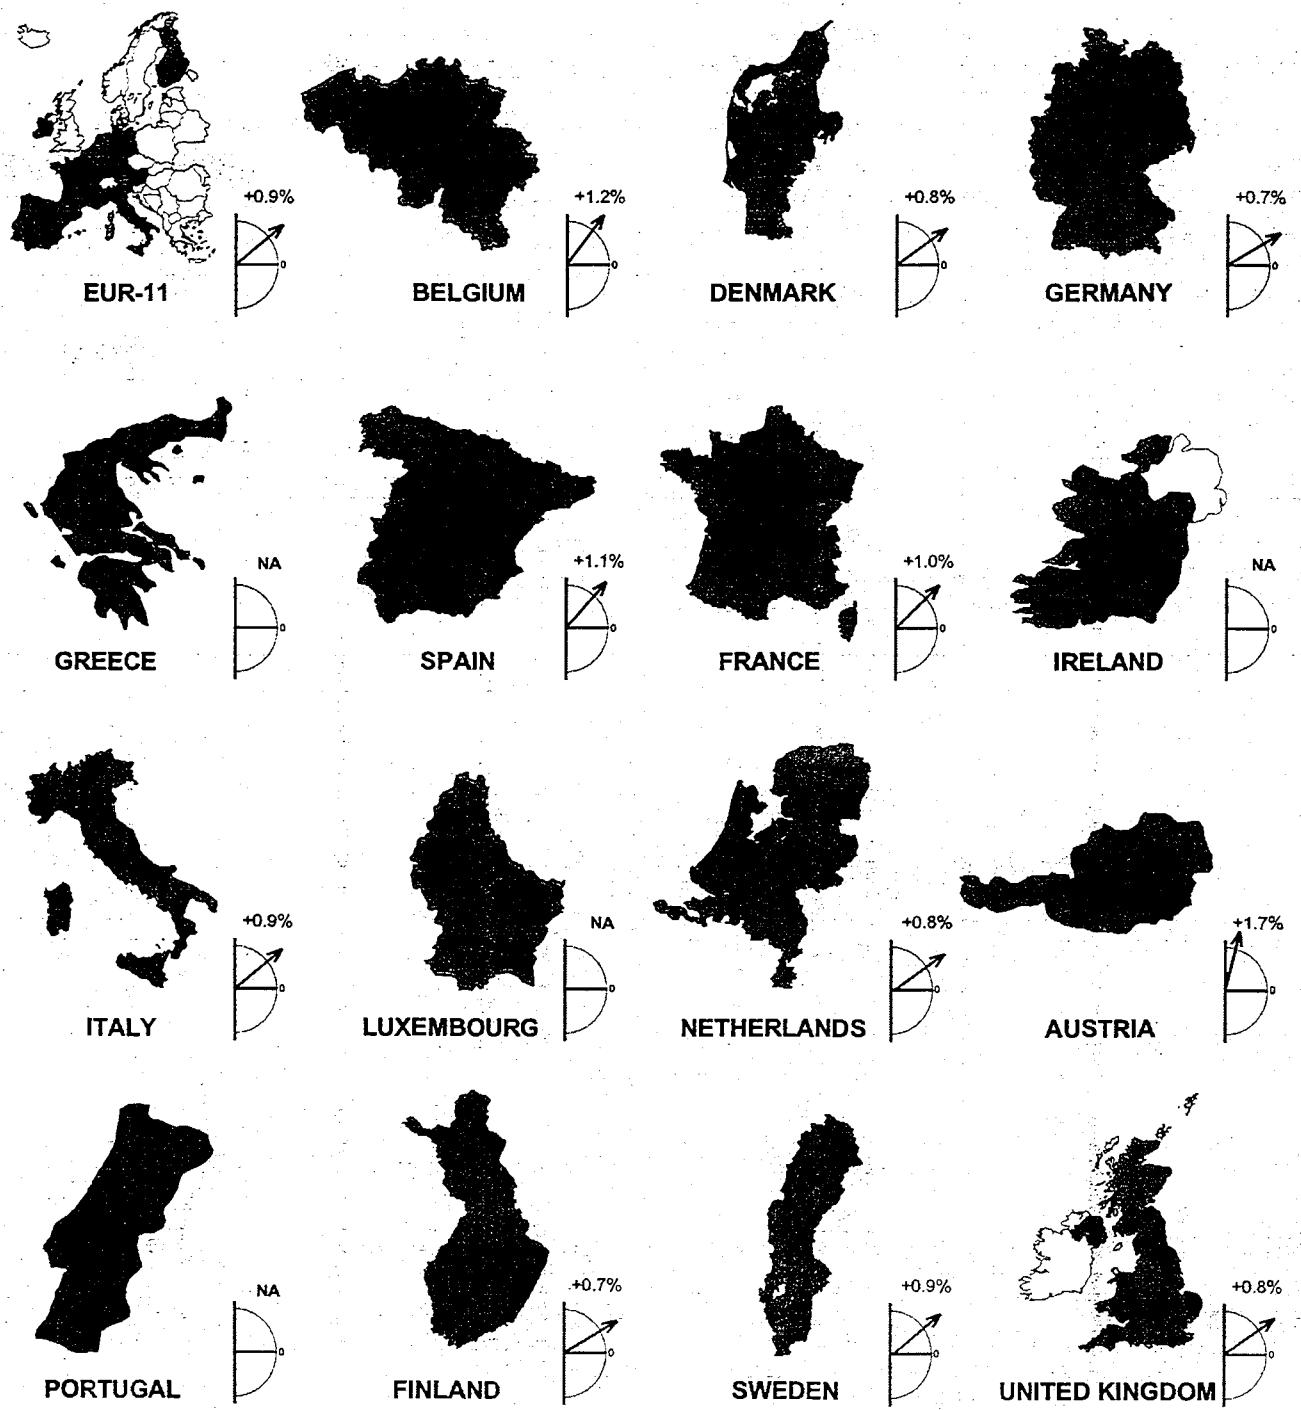

**Figure 1.1: Economic growth of the EUR-11, EU-15 and the economic partners, third quarter 1999, constant prices 1995**

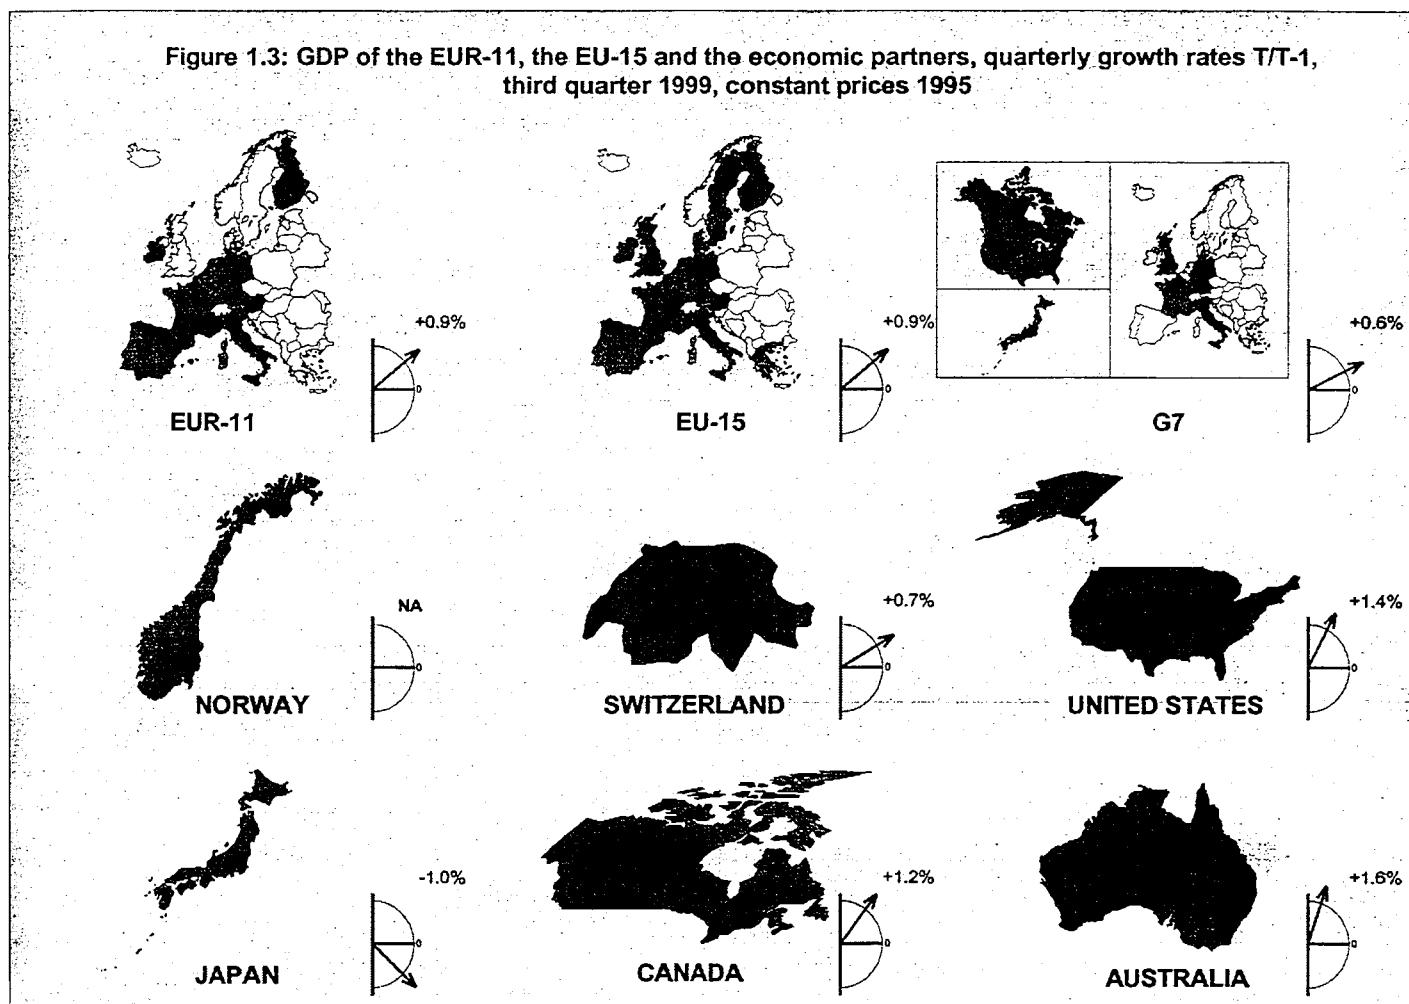

<sup>1</sup> Methodological note: data for the EUR-11 and the EU-15 are calculated according to a statistical framework which is coherent and consistent at the same time, using as indicators the data of the Member States compiling quarterly accounts. Aggregates for EUR-11 and EU-15 were produced using the seasonally adjusted data of the Member States. For Germany, the seasonally adjusted data of the Bundesbank were used, as they are processed using the X11-ARIMA method. This choice ensures a greater coherence of the data, being this method of seasonal adjustment in force in the majority of the EU countries.

<sup>2</sup> The euro-zone consists of the following countries: Belgium, Germany, Spain, France, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal and Finland.

## 2.1 Final consumption expenditure of households and NPISH's

During the third quarter of 1999, the households' final consumption expenditure was more dynamic than in the previous quarter in the euro-zone and the EU-15 (+0.7% for both). With regard to the main economic partners of the EU-15, it accelerated in Canada (+1.2%), Australia (+1.3%), as well as Switzerland (+1.2%); it remained stable in the United States (+1.2%), while dropped in Japan (-0.3%). It displayed a slow down in the G7 (+0.7%).

With regard to the EU Member States, during the third quarter of 1999 the households' final consumption expenditure recorded a recovery in Belgium (+1.1%), Denmark (+0.8%) and Germany (+0.6%). It accelerated in Sweden (+1.7%), Austria (+1.0%), Finland (+0.8%), France (+0.7%) and Italy (+0.4%), whilst slowed down in Spain (+1.0%), the Netherlands (+0.9) and the United Kingdom (+0.6%).

## 2.2. Government final consumption expenditure

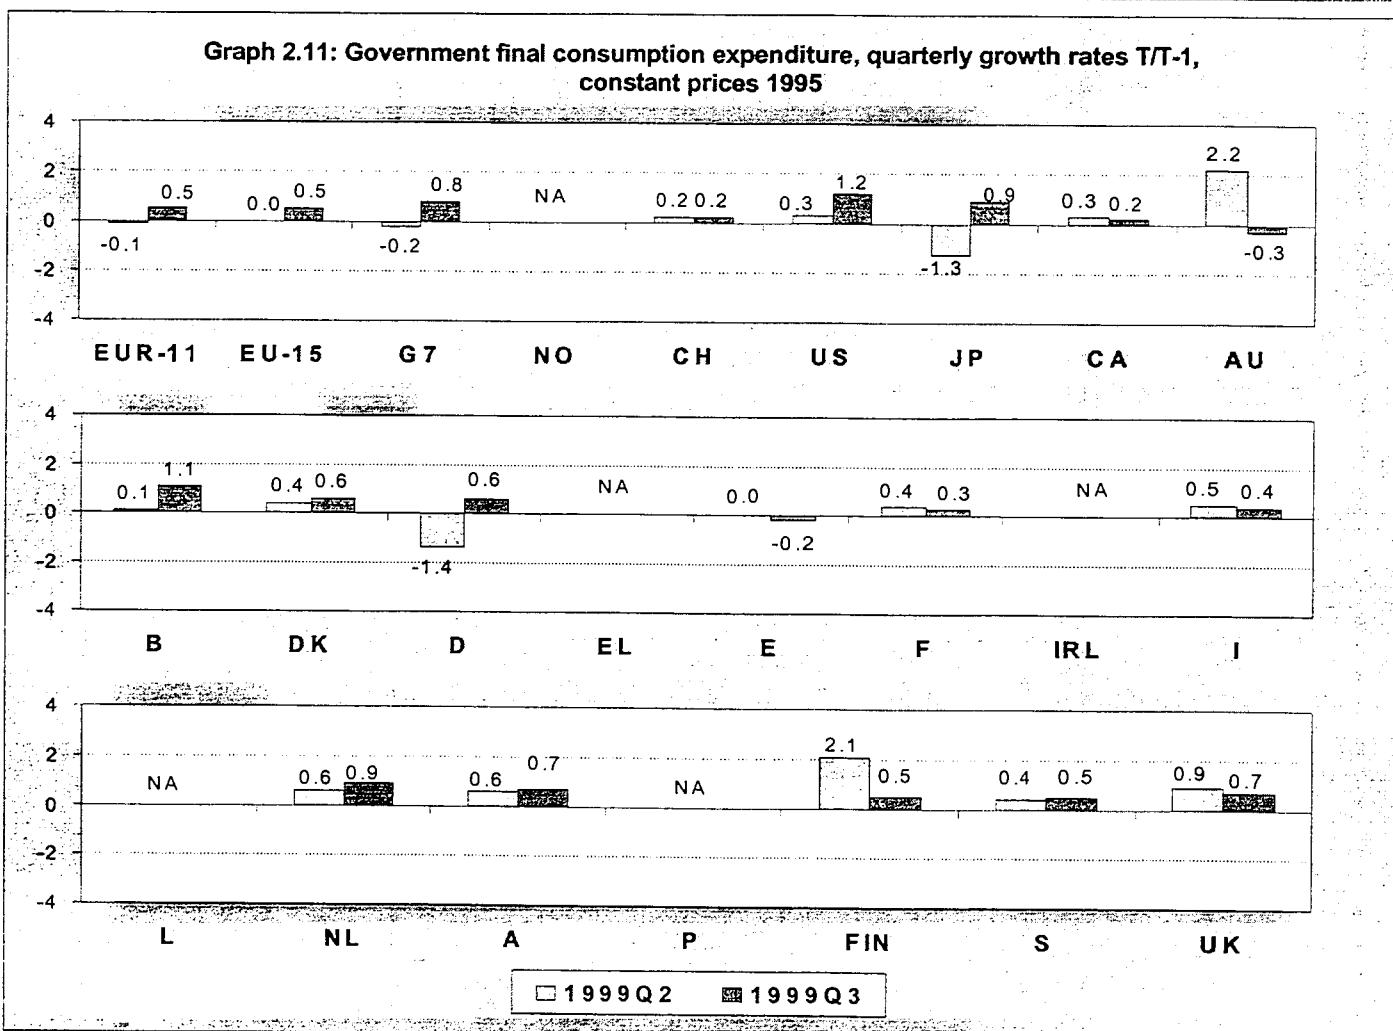

During the third quarter of 1999, the Government final consumption expenditure recorded a recovery in the euro-zone (+0.5%), while accelerating in the European Union (+0.5%). With regard to the main partners of the EU, the FCEG accelerated in the United States (+1.2%), and showed a recovery in Japan (+0.9%). In Canada it slowed down (+0.2%), while Australia's growth rate became negative (-0.3%). It remained stable in Switzerland (+0.2%). A recovery was recorded for the G7 (+0.8%).

Amongst the EU Member States, the growth of the Government final consumption expenditure accelerated in the Netherlands (+0.9%), Austria (+0.7%), Denmark (+0.6%) and Sweden (+0.5%). A recovery was recorded in Germany (+0.6%). The pace of the FCEG slowed down in Belgium (+0.8%), the United Kingdom (+0.7%), Finland (+0.5%), Italy (+0.4%) and France (+0.3%). It went into the negative in Spain (-0.2%).

## 2.3. Gross capital formation

Gross fixed capital formation accelerated during the third quarter of 1999 in the euro-zone and the EU-15, compared to the previous quarter (+1.5% and +1.4%, respectively). The United States recorded a similar situation (+1.5%). Investments displayed a strong resumption in Australia and Switzerland (+5.9% and +2.9%, respectively); conversely they recorded an important slow down in Canada (+0.5%) and dropped in Japan (-4.3%).

The dynamics of the gross fixed capital formation was quite varied in the European Union: Austria (+3.4%), Sweden (+2.4%), Belgium (+2.1%) and Italy (+1.5%) showed a quite significant acceleration; while the Netherlands (+2.5%), Germany (+0.8%) and Denmark (+0.2%) recorded a recovery. The growth of investment kept stable in France (+1.6%), and slowed down in Spain (+2.5%), Finland (+0.7%) as well as the United Kingdom (+0.1%).

Changes in inventories decreased in terms of percentage of GDP, compared to the previous quarter, in the euro-zone and the EU-15 (+0.5% and 0.4% of GDP, respectively), whilst increasing in the United States (+0.8%) and Switzerland (+1.6%). They decreased in Canada (+0.0%) as well as in Australia (+2.0%), and kept stable in Japan (+0.3%) and at G7 level (+0.5%).

Among the EU Member States, weaker slowdowns of changes in inventories, as a percentage of GDP, were recorded in Belgium and Denmark. In Spain they slightly increased. A decrease was observed in Germany, France, Italy, Finland and the United Kingdom.

## 2.4. External balance

The trade surplus in the euro-zone and the EU-15, as a percentage of GDP, increased during the third quarter of 1999, compared to the previous quarter (+1.8% and +1.1% of GDP, respectively). This increase was due to the acceleration in export growth (+3.0% and +3.2%, respectively) whose effect was only partially cancelled out by the acceleration in imports (+1.9% and +2.3%, respectively).

Concerning the EU main partners, the trade deficit of the United States continued increasing (-4.0% of GDP), because of the acceleration in exports (+2.8%) less important than in imports (+3.5%). On the other hand, the commercial surplus increased in Japan (+2.5% of GDP) and Canada (+2.8% of GDP). The trade deficit increased in Australia (-3.7% of GDP), while the Switzerland reduced its surplus (+2.3% of GDP). The G7 external balance remained negative (-0.6% of GDP).

Among the EU Member States, the trade surplus, as a percentage of GDP, increased in Finland (+12.3%), France (+2.9%), Italy (+2.1%) and Germany (+1.4%). It decreased in Sweden (+7.4%), Belgium (+4.3%) and Denmark (+2.8%). On the other hand, the trade deficit worsened in Spain (-2.0%) and Austria (-0.8%), while slightly reducing in the United Kingdom (-4.0%).

## 2.5. Domestic Demand

The growth of the domestic demand in the euro-zone and the European Union accelerated during the third quarter of 1999, compared to the previous quarter (+0.6%, vs. +0.4% for both).

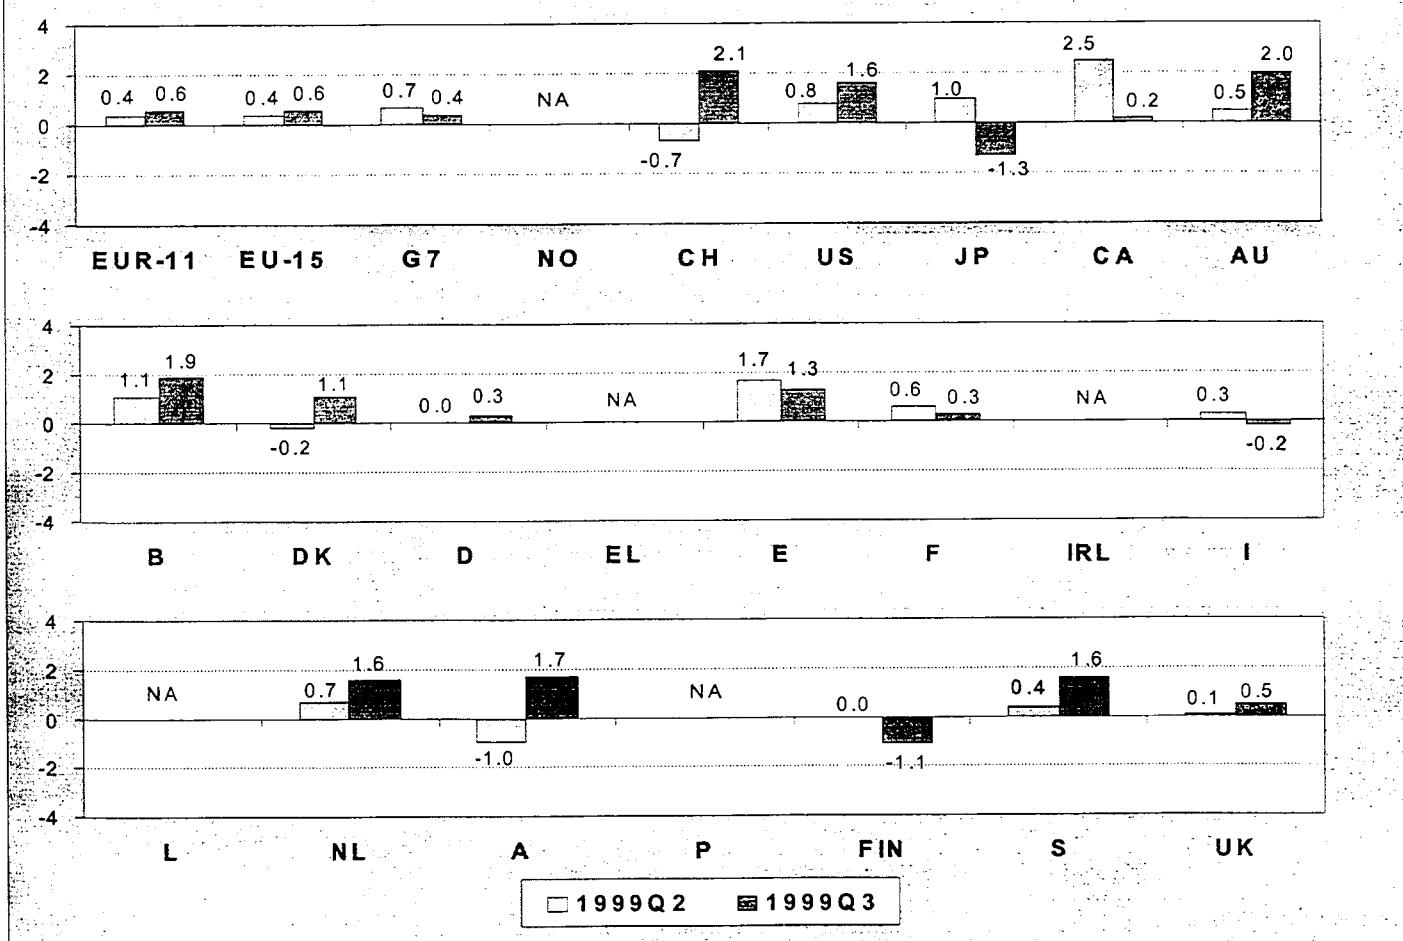

With regard to the economic partners of the EU, the growth of the domestic demand clearly accelerated in the United States (+1.6%), as well as in Australia (+2.0%). It strongly slowed down in Canada (+0.2%), and went into the negative in Japan (-1.3%). In Switzerland the domestic demand showed a recovery (+2.1%). It slowed down in the G7 (+0.4%).

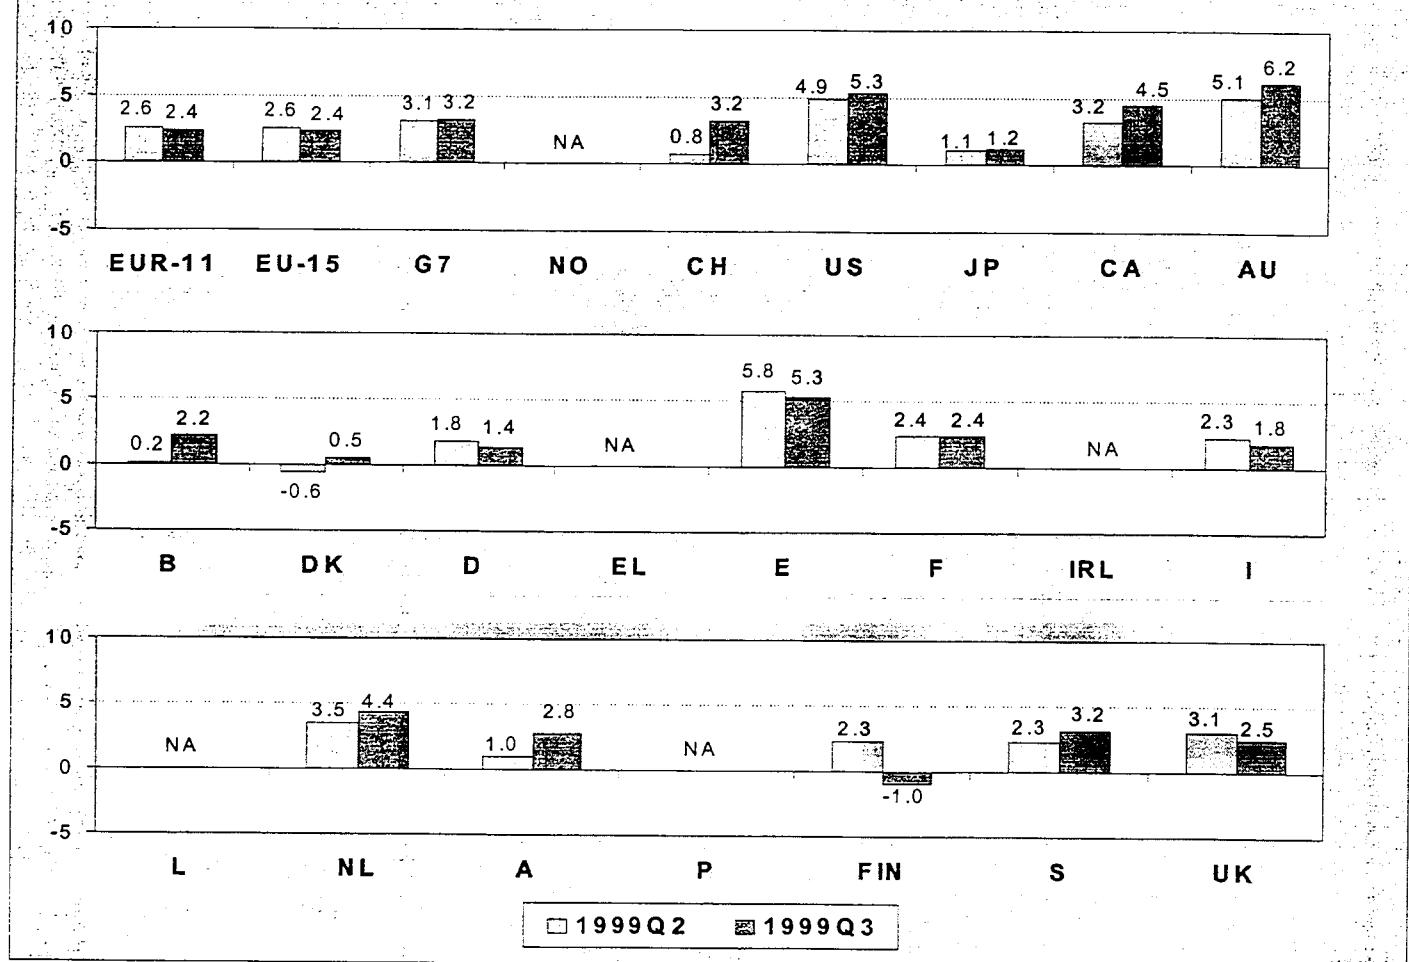

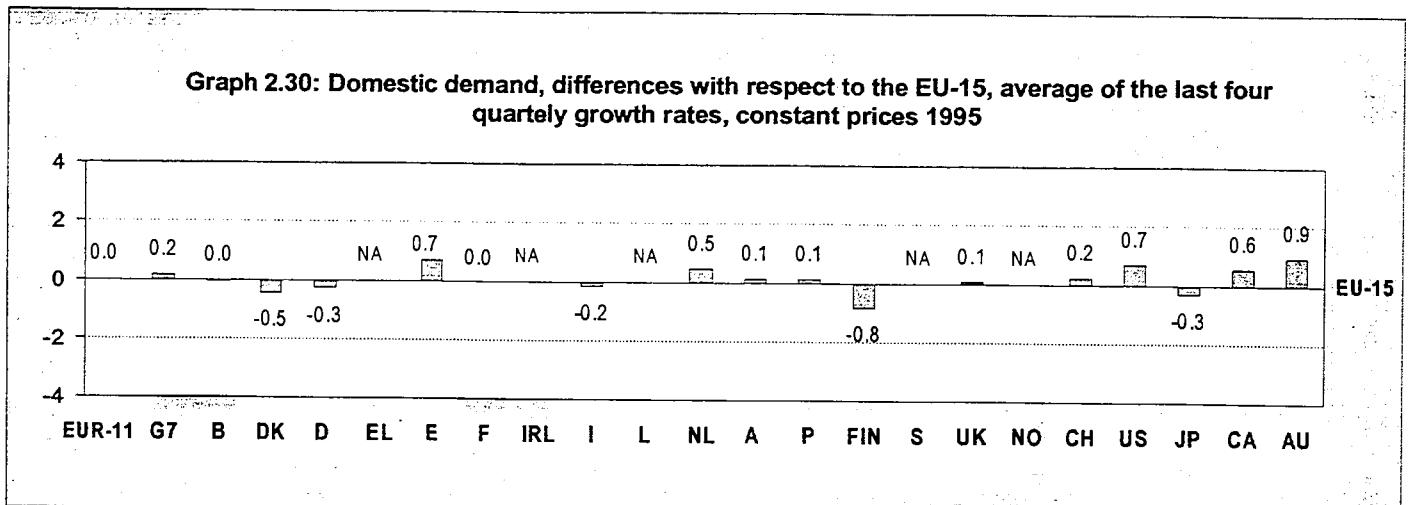

Among the Member States of the EU, the domestic demand accelerated in Belgium (+1.9%), the Netherlands (+1.6%), Sweden (+1.6%), the United Kingdom (+0.5%), as well as in Germany (+0.3%). It showed a recovery in Austria and Denmark (+1.7% and +1.1%, respectively). On the other hand, the domestic demand slowed down in Spain (+1.3%) and France (+0.3%), and dropped in Italy and Finland (-0.2% and -1.1%, respectively).

**Graph 2.27: Domestic demand and components, quarterly growth rates T/T-1, constant prices 1995**

**Graph 2.28: Domestic demand, quarterly growth rates T/T-1, constant prices 1995**

**Graph 2.29: Domestic demand, quarterly growth rates T/T-4, constant prices 1995**

**Graph 2.30: Domestic demand, differences with respect to the EU-15, average of the last four quarterly growth rates, constant prices 1995**

### 3. Gross domestic product by industry

During the third quarter of 1999 the growth of agriculture's value added at basic prices continued to record a negative pace in Belgium (-8.2%) and dropped in Denmark (-15.4%). It remained stable in Germany (+0.9%) and Italy (+0.4%), whilst slowed down in Spain (+0.4%). Conversely, it recovered in France (+0.5%) and Finland (+0.5%); it accelerated in Austria (+0.6%) and stagnated in the United Kingdom (+0.0%).

With regard to the industry value added, acceleration of the growth pace was noticed in Austria (+3.0%), Italy (+1.9%), Spain (+1.8%) and the United Kingdom (+1.2%). It remained stable in Belgium (+1.9%), France (+1.1%) and Germany (+0.5%). The value added of industry slowed down in Denmark (+0.5%) and Finland (+0.6%).

## 5. Prices and exchange rates

Prices, measured by the GDP implicit deflator, increased in the euro-zone during the third quarter of 1999 (+0.2% vs. +0.1% in the previous quarter). Meanwhile, in the European Union the inflation measured by the GDP implicit deflator slowed down (+0.3%), after the big rise recorded in the two previous quarters (+0.9% and +1.1%, respectively). In the United States, prices expressed in national currency, grew according to a stable pace (+0.3%). Inflation recorded an acceleration in Canada (+0.8%), Australia (+0.3%) and Switzerland (+0.8%). Conversely, in Japan prices continued to decrease (-0.5%).

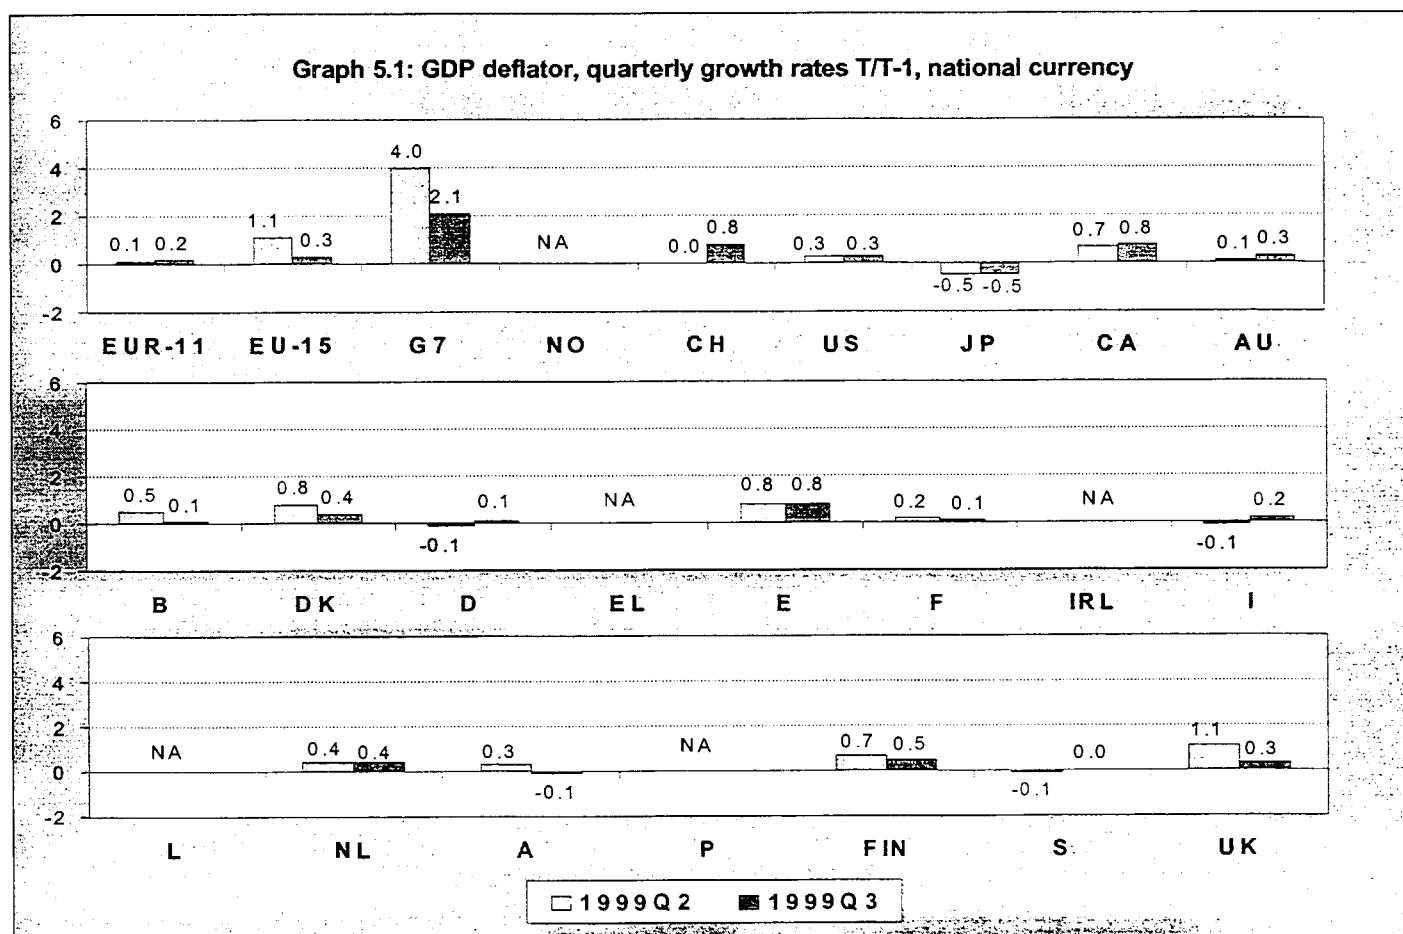

With respect to the EU Member States, a resumption of the prices' growth in national currency was recorded in Germany (+0.1%) and Italy (+0.2%). A slow down of inflation was recorded in Belgium (+0.1%), Denmark (+0.4%), France (+0.1%), Finland (+0.5%), as well as in the United Kingdom (+0.3%). Prices grew according to a stable pace in Spain (+0.8%) and in the Netherlands (+0.4%). They dropped in Austria (-0.1%)

## 6. Quarterly report: The European Union Enlargement

### Introduction: general background

Enlargement is one of the most important challenges for the European Union (EU) as it prepares for the 21<sup>st</sup> century. It is a unique, historic task to further the integration of the continent by peaceful means, extending a zone of stability and prosperity to new members.

The 1993 Copenhagen European Council opened up the perspective of enlargement towards the Candidate Countries in Eastern and Central Europe and Cyprus.

Subsequently, an ambitious strategy of pre-accession was launched at Essen summit. The Madrid European Council in December 1995 reaffirmed the decisions for launching the accession negotiations with the countries applying for European Union membership. It called on the Commission to submit the opinions on the individual applications and to embark on the preparation of a composite paper on enlargement.

In March 1998 the EU formally launched the process that will make enlargement possible. By beginning of 2000, it embraces thirteen applicant countries: Bulgaria,

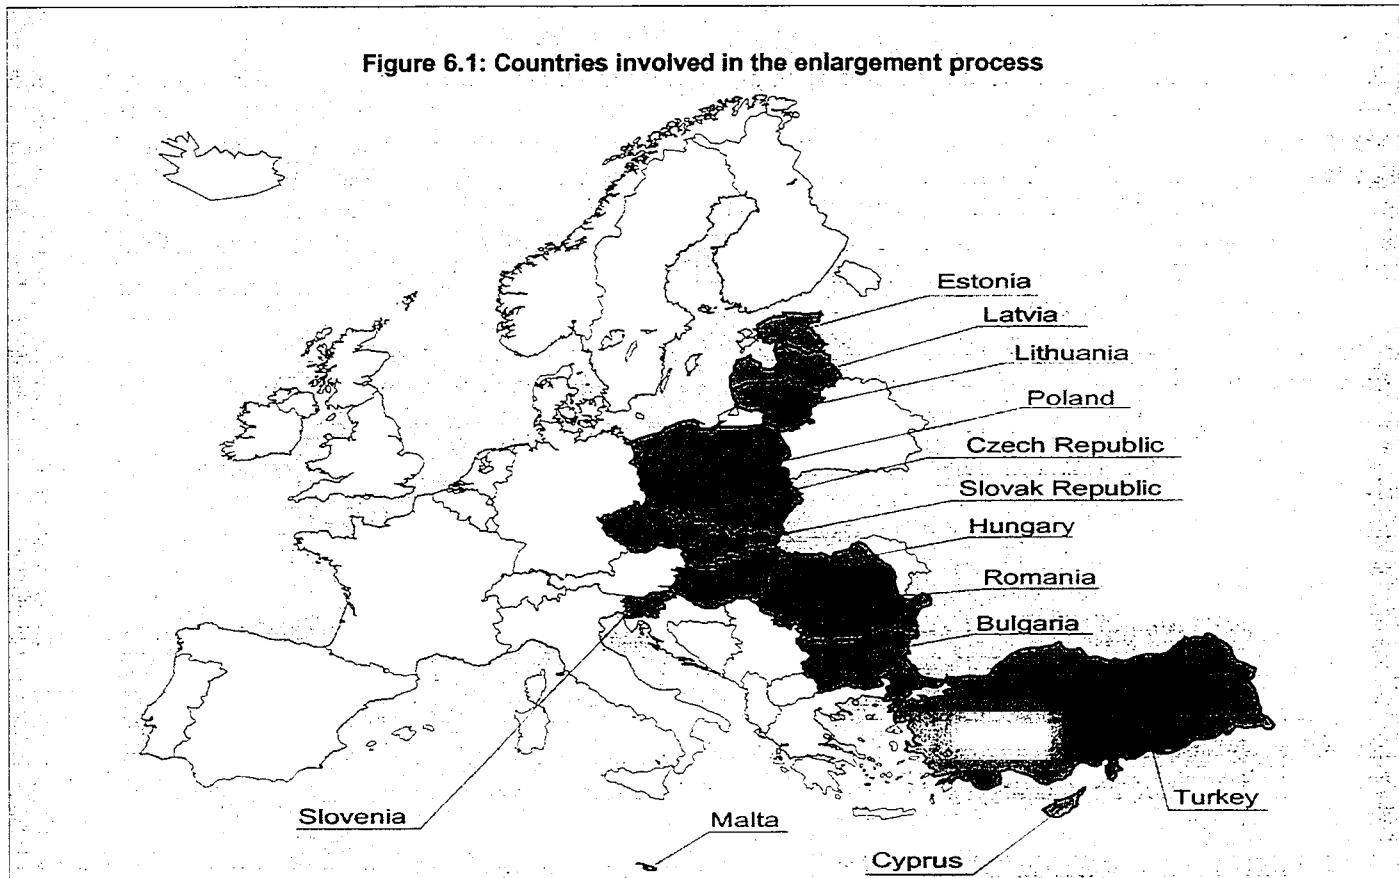

Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Romania, the Slovak Republic, Slovenia and Turkey.

The recent steps towards the enlargement were scheduled in December 1997: in Luxembourg, at its summit, the European Council decided that the enlargement process should encompass three initiatives:

- 12 March 1998: launch of the European Conference, a multilateral framework bringing together ten central European countries, Cyprus and Turkey;
- 30 March 1998: launch of the accession process, covering ten central European countries and Cyprus;
- 31 March 1998: the accession negotiations, which the European Council decided to open on with six countries, as recommended by the European Commission: Cyprus, the Czech Republic, Estonia, Hungary, Poland and Slovenia.

Malta, which had 'frozen' its application for membership in 1996, reactivated it in October 1998.

**Figure 6.1: Countries involved in the enlargement process**

The enlargement is not a new process in the history of the EU. The EU itself is the fruit of a history of successful enlargements. The Treaties of Paris (1951), establishing the European Coal and Steel Community (ECSC), and Rome (1957), establishing the European Economic Community (EEC) and EURATOM, were signed by six founding members: Belgium, France, Germany, Italy, Luxembourg and the Netherlands. The EU then underwent four successive enlargements:

- 1973 Denmark, Ireland and the United Kingdom
- 1981 Greece
- 1986 Portugal and Spain
- 1995 Austria, Finland and Sweden

However, the enlargement facing the EU today poses a unique challenge, since it is without precedent in terms of scope and diversity: the number of candidates, the area (increase of 34%) and population (increase of 105 million), the wealth of different histories and cultures.

Third countries will significantly benefit from an enlarged Union. A single set of trade rules, a single tariff, and a single set of administrative procedures will apply not only just across the existing Member States but across the Single Market of the enlarged Union. This will simplify dealings for third-country operators within Europe and improve conditions for investment and trade.

### From co-operation to accession

Soon after the fall of the Berlin Wall in 1989, the European Community quickly established diplomatic relations with the Central European countries. It removed long-standing import quotas on a number of products, extended the Generalised System of Preferences (GSP) and, over the next few years, concluded Trade and Co-operation Agreements with Bulgaria, the former Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, Romania and Slovenia.

In the meantime, the European Community's Phare Programme, created in 1989, set out to provide financial support for the countries efforts to reform and rebuild

their economies. Phare soon became the world's largest assistance programme in central Europe, providing technical expertise and investment support.

During the 1990s, the European Community and its Member States progressively concluded Association Agreements, so called 'Europe Agreements', with ten countries of central Europe. The Europe Agreements provide the legal basis for bilateral relations between these countries and the EU. The European Community had already established similar Association Agreements with Turkey (1963), Malta (1970) and Cyprus (1972). In the case of Turkey, a Customs Union entered into force in December 1995.

### Accession criteria

In 1993, at the Copenhagen European Council, the Member States took a decisive step towards the current enlargement, agreeing that 'the associated countries in Central and Eastern Europe that so desire shall become members of the European Union.' Thus, enlargement was no longer a question of 'if' but 'when'. Here too, the European Council provided a clear response:

'Accession will take place as soon as an applicant is able to assume the obligations of membership by satisfying the economic and political conditions required'.

At the same time, the Member States designed the membership criteria (to be achieved by the candidate country) that are often referred to as the Copenhagen Criteria (see frame).

At the same time the Candidate Country has to create the conditions for its integration through the adjustment of its administrative structures, so that European Community legislation transposed into national legislation is implemented effectively through appropriate administrative and judicial structures.

The Luxembourg European Council (December 1997) also underlined that 'as a prerequisite for enlargement of the Union, the operation of the institutions must be strengthened and improved in keeping with the institutional provisions of the Amsterdam Treaty'.

### The Copenhagen Criteria

#### (Candidate Country membership criteria)

- stability of institutions guaranteeing democracy, the rule of law, human rights and respect for and protection of minorities;
- existence of a functioning market economy as well as the capacity to cope with competitive pressure and market forces within the Union;
- ability to take on the obligations of membership including adherence to the aims of political, economic and monetary union.

## The role of Eurostat

Eurostat plays an important role in the accession preparations. It has to provide adequate macro-economic statistics from the Candidate Countries, together with a quality assessment of the data and the underlying compilation methods and data sources. Therefore Eurostat's national accountants started in 1996 to establish closer working relations with their colleagues in Candidate Countries through the creation of a special National Accounts working group for Candidate Countries. A work programme was adopted in June 1996 to improve the quality of National Accounts data in terms of reliability, exhaustiveness and correspondence with the "European System of Accounts 1995" (ESA 95), which is the legal framework for National Accounts in the EU. In the following years, this programme has been revised according to the progress made. By now Candidate Countries compilers already fully participate in all Eurostat National Accounts working groups so that they can be considered members of what is usually called the European Statistical System.

In the context of the accession process at the occasion of the screening all Candidate Countries expressed their commitment to fully comply with EU law and practices before accession. Therefore Candidate Countries have started to deliver regularly data<sup>1</sup> to Eurostat. However, despite the considerable progress made by Candidate Countries their data do not yet have the degree of harmonisation and hence of comparability that is standard among Member States.

Technical assistance has played an important role in enhancing the capacity of National Accounts compilers in Candidate Countries to comply with EU law and practices. The work programme contained a series of well-targeted technical assistance activities ranging from estimation methods for final consumption expenditure of households to FISIM or the compilation of supply and use tables or the calculation of the capital stock and the consumption of fixed capital. Later these activities were supported by a pilot project on exhaustiveness. All this allowed Member States experts to look more closely into Candidate Countries compilation systems

## Assessments of the Candidate Countries' National Accounts

### Projects launched in 1997 (areas of weakness):

1. Estimation methods at constant prices
2. General Government and NPISH
3. Final consumption expenditure of households
4. Banking and insurance, FISIM
5. Exhaustiveness of National Accounts
6. Use of registers for National Accounts purposes
7. Dwelling services

### Projects launched in 1998:

1. Pilot project on exhaustiveness, including illegal activities,
2. Pilot project on Government Finance Statistics,
3. Pilot project on prices,
4. Pilot project on Foreign Direct Investment,
5. Calculation of capital stock and consumption of fixed capital at replacement costs,
6. Estimates for shuttle trade and tourist expenditure,
7. Development/improvement of estimates for holding gains,
8. Calculation of a small input/output table (IOT),
9. Development of a National Accounts database using Electronic Data Interchange for data transmission (GESMES),
10. Borderline between intermediate consumption and final uses
11. Exports, imports and the transition between GDP and GNP.

Besides the multi-country project work, country-specific projects are defined in order to tackle particular problems of individual Candidate Countries.

<sup>1</sup> Data delivery is very much confined to non-financial National Accounts. However, some Candidate Countries have already started to compile Financial Accounts. Moreover, the compilation of statistics required under the Excessive Deficit procedure has equally started in Candidate Countries with the help from Eurostat and its partners in Member States.

and write reports which were discussed later with Candidate Countries compilers and thereafter cast by them into concrete and corrective actions.

Technical assistance will have to continue over the next few years to improve the methods used and thereby the data quality and comparability attained. Candidate Countries compilers will be assisted in applying National Accounts rules and principles in complicated practical and country specific situations, to ensure the exhaustiveness of the accounts, to overcome the lack of basic data and improve the reliability of existing basic data, to assure consistency between the different parts of the National Accounts, and to exploit all possibilities for cross-checking and validating the results.

### National Accounts figures

Non-financial National Accounts data are supplied to Eurostat by the Candidate Countries' National Statistical Institutes under an established regular reporting system similar to the Member States reporting system under ESA 1995.

Data are regularly published in Eurostat publications, "Statistics in Focus" and "The Accounts of the Union" (subject-matter publications) and in the Eurostat dissemination database "NewCronos".

Gradual changes in calculation methods and improvements in data quality are incorporated in the data sets. For the time being, however, statistics from the Candidate Countries must still be treated with some caution.

As mentioned above, they are derived from national sources that do not yet fully conform to EU standards. Moreover, comparability with the corresponding EU statistics cannot be guaranteed.

Major data-quality and comparability problems relate to:

1. country-specific adaptation of theoretical National Accounts knowledge to the complicated practical situations of economies in transition;
2. exhaustiveness of the accounts;
3. lack of basic data;
4. reliability of basic data; a high degree of "believing in figures" is evident; figures emanating from very different sources are often regarded as "correct" without sufficient checks being made on reliability, completeness, definitions etc;
5. consistency between the different parts of National Accounts;
6. failure to exhaust all scope for cross-checking and validating results.

In future, therefore, the Candidate Countries National Accounts data can be expected to undergo significant changes. However, there is no systematic bias in the data; gaps and shortcomings occur in both directions, leading to over- and underestimation of GDP. It is currently very difficult to estimate the net effect of all these tendencies on the level of GDP, but a certain under-estimation of the Candidate Countries' GDP values is more likely.

**Table 6.1: GDP<sup>1</sup> growth rates - percentage change on previous year/same quarter of previous year (not seasonally adjusted)**

<sup>1</sup> Percentage of GDP

## 8. Methodological note

This publication provides data on the main aggregates of the quarterly accounts of the European Union as a whole (EU-15), the Member States participating in Economic and Monetary Union (EUR-11), the Member States that compile quarterly accounts, the main non-European economic partners and the EFTA countries.

These aggregates are shown as levels (in current euro prices and in 1995 constant prices) and as rates of change, to which are added the main deflators derived from the series in national currency.

### Accounting aspects

Quarterly national accounting data are generally estimated by the National Statistical Institutes, except in Austria, where they come from the Österreichisches Institut für Wirtschaftsforschung, in Belgium, where they are compiled by the Banque Nationale de Belgique, and Switzerland, where they come from the Office fédéral du développement économique et de l'emploi (Services des questions économiques et conjoncturelles). The national quarterly data coming from the Member States, as well as those coming from the EFTA countries, are estimated according to national accounting systems, which are compatible with the principles of the ESA 95.

There are, however, some differences, particularly with regard to the total for the Union, where exports and imports include both extra-EU and intra-EU trade. On the other hand, the Union's trade balance tallies with the other aggregates.

The United Kingdom, France, Italy and the Netherlands produce rapid estimates of the main quarterly accounting aggregates, while Finland calculates a monthly estimate of GDP.

### Methodology

The countries apply different estimating methods which fall into two main types of approach: the direct approach and the mathematical and statistical approach.

The direct approach involves conducting surveys, sometimes on a smaller scale, which reproduce the calculation of the annual aggregates. The United States, Canada, the United Kingdom and some extent Germany are among the countries which use this approach, which requires a highly developed and efficient information system.

The mathematical-statistical approach mainly involves extrapolating quarterly data by means of reference

indicators or estimating quarterly data from annual data, on the basis of a multiple linear regression model, using reference indicators available both annually and quarterly. The main differences in the methods used relate to the form which the disturbance term of the statistical models may take. France, Italy, Portugal, Switzerland, Spain and the Netherlands are among the countries which have adopted this approach.

Although this classification may seem rigid, in practice the direct method is often supplemented by indirect methods in order to fill in the gaps or make up for late information, and conversely the indirect method is often supplemented by direct elements (e.g. on the basis of data from general government accounts, the accounts of major companies, etc.)

Some Member States, in particular the Netherlands and Denmark, compile quarterly data in input-output tables.

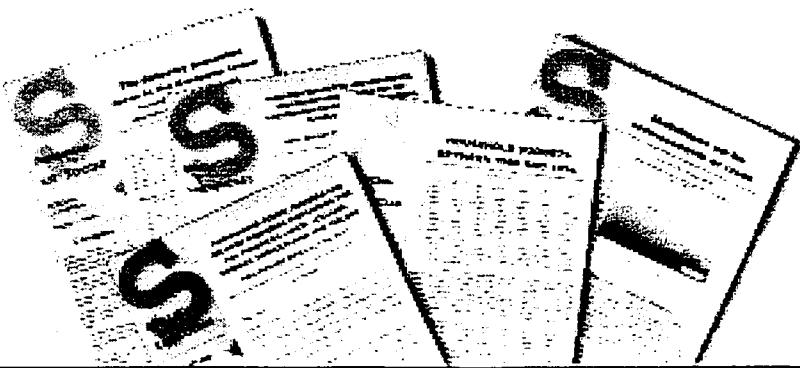

### Seasonal adjustment

The procedures used to adjust for seasonal variations are mostly variants of the X-11 procedure, whereby the main difference is whether or not ARIMA extrapolation is applied before seasonal adjustment. Only Germany, Austria and Spain use different methods. Germany (Statistical Office) uses the Berlin method (BV4), which basically involves regression techniques. Spain (airline model), Italy and Austria (Tramo/Seats) use a method based on the canonical decomposition of an ARIMA model. France, Spain and the United States do not publish any raw data, in contrast to Norway, which publishes raw data only. Some countries such as Austria, Finland and Sweden do not have seasonally adjusted data at current prices. Spain is the only country which publishes cycle-trend series only. If a country sends its series partly or entirely in raw form, they are seasonally adjusted by Eurostat using the X-11 ARIMA method. In some countries, the procedures used to adjust for seasonal variations involve any correction for working days (Germany Central Bank, France and Italy).

Some Member States seasonally adjusted data are not balanced. In Denmark and the Netherlands, there is a difference in relation to the accounting framework, where GDP on the expenditure side is different from that of the output side. In other countries, the annual data are not balanced with the sum of the gross quarterly data because of the way in which the seasonal adjustment procedures are applied, or because the procedures used lack a balancing option (e.g. the BV4 procedure used in Germany).

## **Statistics in focus**

To get straight to the heart of the matter and obtain an effective insight into the reality of the EU Member States, the series of documents entitled *Statistics in focus* offers you rapid and easy access to information on all current trends in Europe.

**Statistics in focus:** find out, understand and decide in confidence with:

- harmonized, reliable and comparable data on each Member State of the European Union;
- clear and concise comments and analyses;
- charts and maps easy to understand;
- the latest available data.

*Statistics in focus* is available as single copy or by subscription. Subscriptions are available for one single theme (except themes 7 and 9) or for the whole collection. *Statistics in focus* is available as printed version or as PDF-file sent by e-mail.

**Prices on request from the Data Shop network (see end of the publication).**

# Eurostat essentials.....

## Understand today's Europe to anticipate the future better

- **Eurostat Yearbook:** a comprehensive statistical presentation supplemented by comparative data for the EU's main trading partners (CD-ROM version available).
- **Money, finance and the euro: Statistics:** This monthly statistical document provides short-term series for a wide range of financial indicators such as interest rates, exchange rates, money supply and official reserves (quarterly CD-ROM version available).
- **Europroms CD-ROM:** the only source of information in Europe to propose detailed and comparable data on output, external trade and the markets of several thousand industrial products.
- **Services in Europe:** an overview of the companies active in the service sector including detailed sectoral, thematic and country analysis.
- **Agriculture and fisheries: Statistical yearbook 1998:** the most important elements of Eurostat's publications on agriculture, forestry and fisheries in abbreviated form.
- **Comext CD-ROM:** provides data on external trade on all goods imported into or exported from the statistical territory of the European Union or traded between the statistical territories of the Member States.
- **Transport development in the central European countries (analysis of the trends for the years 1994 and 1995):** a statistical overview of transport in 11 central European countries, together with a review of data availability.
- **Energy — monthly statistics:** With the help of graphs, these statistics cover updates of the principal statistical series characterising short-term trends in the energy sectors (coal, oil, gas, electrical energy).

### New Cronos:

More than 160 million items of data in this macroeconomic and social database are available to all those who need high-quality statistical information for decision-making.

### Regio:

Eurostat's database for regional statistics. Covers the main aspects of economic and social life in the Community; demography, economic accounts, employment, etc.

### Comext:

The database for statistics on the European Union's external trade and trade between Member States. 11 000 products by year are covered with all partner countries (more or less 250).

### Europroms:

The only source of information in Europe that supplies detailed and comparable data on output, external trade and markets of several thousand industrial products. It makes it possible to calculate in precise terms the domestic market for some 5 000 products for most EU countries.

**For further information, contact the Eurostat Data Shop network or visit us on the Internet at: [www.europa.eu.int/comm/eurostat/](http://www.europa.eu.int/comm/eurostat/)**
