EXPANDING EU TRADE WITH POLAND

Tim Allen

About 61% of total Polish imports originated from the EU, and about 70% of Polish exports were destined for the EU. Over the past 6 years, these trade-ratios have remained stable, although Polish trade has increased more than twofold over the same period. Poland remained the EU's 4th biggest export market while the EU, and in particular Germany, were Poland's main trading partners.

Trade integration between EU and Poland on a high level

The trade integration between Poland and the EU has stabilised at a high level. Poland's imports from the EU increased more than twofold since 1995, while exports to the EU almost doubled over the same period. However, while Poland's exports to the EU grew at the same pace as total exports, imports from the EU grew at a slower pace than total imports.

Poland experienced an increasing trade deficit over the past six years (see figure). After being more or less evenly balanced between EU and non-EU countries before 1995, the EU played an increasing prominent role in Poland's trade deficit up until 1999. In 2000 the situation changed in so far as 55% of the deficit (around 10 bn euro) resulted from trade with non-EU countries. Poland imported goods worth 53 bn euro and exported goods worth 34 bn euro in 2000. This represented around one percent of world trade (imports 1.0% and exports 0.6% respectively).

Trade deficit on energy

Poland's trade deficit was 18.7 bn euro in 2000, a deterioration over 1999, despite the fact that the vast majority of product groups actually improved (see table 1). The trade balance for "machinery, equipment" which was by far most important product group (i.e. adding up the overall value of exports and imports) showed a deficit of 8.2 bn euro which nonetheless was an improvement of 0.3 bn euro. "Wood, stone and metal-products" also showed an improvement of 0.4 bn euro compared to 1999.

The deterioration of the tradebalance was mainly due to substantial increases in oil prices during 2000, which resulted in dearer imports of energy. Although "Mineral products & fuel" only constituted about 12% of total imports in 2000. an increase of nearly 80% in this product group was the main single reason behind the 23% increase in imports and a deteriorating trade balance. Polish exports increased by about a third in 2000, and the two major product groups "wood, stones and metal-product" and "machinery, equipment", contributed to this by rising 30% and 55% respectively.

By ranking the sections of product that have contributed to the highest trade surpluses and trade deficits in recent time, table 2 indicates that Poland is a net importer of capital equipment with higher value added (machine and electrical engineering goods) goods. If this is linked to a pickup in investment and to industrial restructuring, it can be expected to lead to a greater export capacity in the medium term.

EU main partner

Most of Poland's trade is carried out with the EU: around 61% of all imports originated from and around 70% of all exports were destined for the EU market (see table 3). When ranked in importance as trading partners (i.e. adding up the overall values of all exports and imports), three EU Member states (Germany, Italy and France) took places one, two and four. In this manner, Russia ranked third with respectively ten and three percent of imports and exports. The significant higher imports from Russia are mainly due to a 115% increase in energy imports. Nearly 90% of total Polish imports from Russia were in "mineral and fuel" in 2000. The US ranked seventh (before the Czech Republic).

Germany focal point

Germany, the single most important trading partner for Poland (absorbing roughly half of Polish exports into the EU and making 43% of EU exports), was followed in importance by Italy and France (see table 4). All EU Member states except Greece and Portugal had a positive trade balance vis-à-vis Poland, but data show that most members of the EU have lost ground in comparison to 1999. Only the Netherlands, Ireland and Spain and to a lesser extent, Luxembourg and Austria have improved their trade balance vis-àvis Poland since 1999.

EU trade with Poland

At the Harmonised System (HS) twodigit level, the main group of products purchased by the EU from Poland was made up of "road vehicles" followed by "machinery and mechanical appliances" and "electrical machinery and equipment, each accounting for roughly one tenth of EU imports (table 5). Conversely, exports to Poland comprised largely "machinery and mechanical appliances" (20%) machinerv and "electrical and equipment" (11%). The exports of "Data processing machines" (HS 8471) have surged during recent years and account for about 10% of the exports of "Machinery and mechanical appliances". Also, "Road vehicles" have featured as one of the most important exports and imports product throughout the nineties, in particular "motor cars and other vehicles" (HS 8703) and "motor parts and accessories" (HS 8708) which in total amounted to about 5 % of overall EU exports and imports to Poland.
