# QUARTERLY ACCOUNTS

Third Quarter 1999

First Eurostat estimates

Roberto BARCELLAN

First Eurostat estimates<sup>1</sup> for the third quarter of 1999 point out that economic growth within the euro-zone<sup>2</sup> and the EU-15 sped up, recording a 1.0% rate for the GDP of both (+0.6% in the previous quarter).

These findings are mainly due to an accelerated pace in household's final consumption expenditure (+0.5 of the GDP variation for both the euro-zone and the European Union) as well as in exports (+1.0 and +1.1 of the GDP variation for the euro-zone and the European Union, respectively).

As far as the main partners of the European Union are concerned, the US economy sped up during the third quarter of 1999 (+1.4% vs. +0.5% in the previous quarter). The Japanese GDP growth rate conversely dropped by -1.0%, having reached +1.0% in the previous quarter.

In comparison with the third quarter of 1998, the euro-zone and the EU-15 GDP increased respectively by 2.3% and 2.2%. The United States accounted for 4.2%, while Japan recorded a 1.0% increase.

During the first nine months of year 1999, the euro-zone and EU-15 GDP increased by 1.9%, the US by 4.0% and Japan by 0.4%, with respect to the three first quarters of 1998.

<sup>1</sup> Methodological note: data for EUR-11 and EU-15 are calculated within a coherent and consistent statistical framework using as indicators the available data from the Member States. Given that some Member States have not published their quarterly accounts yet, and that some data are provisional, EUR-11 and EU-15 data must be considered provisional too. Revisions are likely in the weeks to come.

<sup>2</sup> The euro-zone consists of the following countries: Belgium, Germany, Spain, France, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal and Finland.

EUR-11 and EU-15 aggregates are compiled making use of the seasonally adjusted data of the Member States. For Germany, the seasonally adjusted data from the Bundesbank are used. These data are derived from the X-11 ARIMA method. This choice ensures a better coherence of the data, because the majority of the EU countries use this seasonal adjustment method.
