Mit der monatlich erscheinenden Veröffentlichung „Eurostatistik“ – Daten zur Konjunkturanalyse werden innerhalb kürzester Frist die neuesten statistischen Daten über die Europäische Gemeinschaft als Ganzes (EUR 12), über jedes Mitgliedsland sowie über die Vereinigten Staaten und Japan bekanntgegeben.

„Eurostatistik“ enthält nicht die Gesamtheit des bei Eurostat verfügbaren statistischen Materials, sondern eine Auswahl der relevantesten Reihen über die konjunkturelle Entwicklung.

Die Reihen werden jeweils für die letzten 15 Monate, die letzten fünf Quartale und die letzten vier Jahre veröffentlicht, um eine kurz- oder mittelfristige Analyse – gegebenenfalls mit überarbeiteten Zahlen – zu ermöglichen.

Schnelligkeit und Pünktlichkeit sind die wichtigsten Vorzüge dieser Veröffentlichung. Aus diesem Grunde wurde sie im Umfang bewußt klein gehalten und enthält keine Anmerkungen zur Methodik, die im übrigen in den spezialisierten Veröffentlichungen von Eurostat zu finden sind.

„Eurostatistik“ besteht aus drei Teilen:

- Die Rubrik „kurz notiert“ gibt die wichtigsten Ereignisse und Entwicklungen der jüngsten Zeit im wirtschaftlichen, finanziellen und sozialen Bereich wieder.
- Im Schaubilderteil werden die wichtigsten Reihen über die wirtschaftliche Entwicklung in der Gemeinschaft, den Mitgliedstaaten, den Vereinigten Staaten und Japan veranschaulicht.
- Im Konjunkturdatenteil werden die Daten, die von Eurostat auf der Grundlage gemeinsamer Kriterien harmonisiert wurden, für sämtliche Mitgliedstaaten dargestellt und mit den Daten der Vereinigten Staaten und Japans verglichen.

Die in „Eurostatistik“ veröffentlichten Daten stammen aus dem „ICG“-Bereich der On-line-Datenbank „Cronos“ von Eurostat.

Wer Zugang zu Cronos besitzt, kann jederzeit die Tabellen dieser Veröffentlichung abfragen, wobei die Daten täglich auf den neuesten Stand gebracht werden. Hinweise zur „on-line“-Benutzung finden sich auf der letzten Seite.

Weitere Informationen über „Eurostatistik“ können bei folgender Stelle angefordert werden:

**WECHSELKURSE: Paritäten der am Wechselkursmechanismus teilnehmenden Währungen erneut geändert**

Innerhalb des Wechselkursmechanismus des EWS wurden die Währungsparitäten erneut geändert, als der Währungsausschuß der EG am 22. November die 6 %ige Abwertung der spanischen Peseta und des portugiesischen Escudo gegenüber den übrigen am Wechselkursmechanismus teilnehmenden Währungen (D-Mark, französischer Franc, belgischer Franc, Gulden, dänische Krone und irisches Pfund) bekanntgab. Ferner wurde angekündigt, daß Spanien die während der Währungskrise im September verhängten Kapitalverkehrskontrollen aufheben werde.

Der Abwertung vorausgegangen war die Entscheidung Schwedens, die Koppelung der Krone an den Ecu vorübergehend aufzuheben (s.u.), sowie eine gegen die Peseta, die dänische Krone und das irische Pfund gerichtete Währungsspekulation. Die Peseta war bereits im September um 5 % abgewertet worden.

Als unmittelbare Folge dieser Paritätenänderung waren erneut Spannungen auf den Devisenmärkten zu beobachten, wobei am 23. November vor allem die dänische Krone und das irische Pfund unter Druck gerieten. Die Zentralbanken Dänemarks und Irlands erhöhten daraufhin ihre Tagesgeldsätze auf rund 50 % bzw. 30 %. Weitere Zinsanhebungen gab es in Spanien (Anhebung des Interventionssatzes um 0,75 % auf 13,75 %), Portugal (Anhebung des Satzes, zu dem den Banken Liquidität zur Verfügung gestellt wird, auf 20 %) und Norwegen (Anhebung des Tagesgeldsatzes von 17 % auf 25 %), wobei die norwegische Zentralbank durch diese Maßnahme versuchte, die Koppelung der Krone an den Ecu aufrechtzuerhalten. Die isländische Krone, die an einen Währungskorb gekoppelt ist, wurde ebenfalls um 6 % abgewertet (1).

Die Wechselkursparitäten setzten sich am 24. November fort, als die irischen Tagesgeldsätze noch weiter, auf nunmehr 75 %, angehoben wurden und das irische Pfund seinen unteren Interventionskurs gegenüber dem belgischen Franc, der stärksten Währung mit enger Schwankungsbreite, erreichte. Auch der französische Franc verlor an Wert und fiel trotz Interventionen seitens der Banque de France auf den niedrigsten Stand gegenüber der D-Mark seit Mitte Oktober.

Den jüngsten Zinsanhebungen vorausgegangen waren mehrere Zinssenkungen in verschiedenen EG-Mitgliedstaaten. Am 12. November wurden die Leitzinsen im Vereinigten Königreich um 1 % auf 7 % zurückgenommen. Am selben Tag kündigte die Banca d'Italia die Senkung ihres Diskontsatzes um 1 % auf 13 % an, nachdem dieser am 26. Oktober bereits um 1 % herabgesetzt worden war, und die Banque de France nahm ihren Interventionskurs (den Zinssatz für Ausleihungen an die Geschäftsbanken) um 0,25 % auf 9,1 % zurück. Dieser war am 2. November bereits um 0,25 % gesenkt worden – dies war die erste Zinssenkung in Frankreich seit Dezember 1991. Bei Abfassung des vorliegenden Berichts waren das Pfund Sterling und die Lira noch nicht wieder in den Wechselkursmechanismus zurückgekehrt, denn ihr Kurs – und dies gilt vor allem für das Pfund – war noch immer weit entfernt von ihrem früheren DM-Leitzins.

Infolge der Unsicherheiten innerhalb des Wechselkursmechanismus gewann der US-Dollar gegenüber den europäischen Währungen weiter an Wert, nachdem sich sein Wechselkurs gegenüber den meisten Währungen bereits im Oktober und in der ersten Novemberhälfte erhöht hatte. Am 23. November stand der Dollar bei 1,602 DM. Er hatte damit zwar noch nicht wieder den Kurs vom Jahresanfang erreicht, jedoch gegenüber dem Tiefststand vom 2. September, als 1 Dollar nur noch 1,3905 D-Mark entsprach, um 15 % an Wert gewonnen. Noch ausgeprägter war im gleichen Zeitraum der Kursanstieg des Dollar gegenüber dem Pfund Sterling (24 %) und der Lira (28 %), die beide in den letzten Monaten relativ schwach waren.

Wie bereits erwähnt mußte die schwedische Reichsbank, die sich im September einige Zeit – wenn auch nur mit Hilfe extrem hoher Tagesgeldsätze – einem äußerst starken Druck widersetzt hatte, am 19. November die Koppelung der Krone an den Ecu aufgeben, nachdem eine Woche lang Kapital aus Schweden abgeflossen war. Die Zinsen waren für kurze Zeit angehoben worden, bevor deutlich wurde, daß diese Politik diesmal nicht greifen würde. Die unmittelbare Folge war eine effektive Abwertung der schwedischen Krone gegenüber der D-Mark um 9,4 %. Nachdem auch Finnland im September die Ecu-Ankoppelung vorübergehend aufgehoben hat, ist Norwegen momentan das einzige skandinavische Nicht-EG-Land, dessen Währung noch an den Ecu gekoppelt ist.

**RENDITEN VON STAATSANLEIHEN: Starker Renditenrückgang in Deutschland**

Die Nominalrenditen deutscher Staatsanleihen fielen von 8 % im September auf 7,4 % im Oktober und haben damit ihren tiefsten Stand seit Oktober 1989, kurz vor dem Fall der Berliner Mauer, erreicht. In den sechs Monaten von August 1990 bis Januar 1991 lagen die Renditen bei 9 % oder darüber; seither ist ein Renditenrückgang festzustellen.

Auch in anderen Ländern, deren Währungen die an den Devisenmärkten im September zu verzeichnenden Turbulenzen unbeschadet überstanden haben, waren die Renditen von Staatsanleihen rückläufig. Die holländischen Renditen fielen von 8,2 % auf 7,6 %, die belgischen von 8,8 % auf 8,3 % und die französischen von 9 % auf 8,6 %. Die dänischen Anleiherenditen, die in der Zeit nach dem dänischen „Nein“ zum Vertrag von Maastricht angestiegen waren, gingen im Oktober von 9,5 % auf 9 % zurück.

In den Ländern, deren Währungen innerhalb des Wechselkursmechanismus eine schwächere Position innehaben, und in den Ländern, die nicht mehr am Wechselkursmechanismus teilnehmen, sind die Anleiherenditen in der Regel relativ hoch, teilweise sogar höher als vor den Turbulenzen an den Devisenmärkten. Die spanischen Anleiherenditen stiegen im Oktober auf 13,6 %, nachdem sie im September bei 13,1 % und im August bei 12,7 % gelegen hatten. Die italienischen Renditen gingen im Oktober zwar von 15,2 % auf 14 % zurück, im September waren sie jedoch von 12 % auf 15 % gestiegen.

Die realen (inflationbereinigten) Renditen von Staatsanleihen sind der folgenden Tabelle zu entnehmen:

**Reale langfristige Zinssätze (Monatsdurchschnitte)**

	3/92	6/92	9/92
Belgien	6,1	6,3	6,5
Dänemark	6,1	6,7	7,5
Deutschland	3,3	4,0	4,4
Spanien	4,5	5,5	7,3
Frankreich	5,9	6,2	6,4
Italien	6,2	6,6	10,5

(1) Seit dem 1. Januar 1992 setzt sich der Währungskorb, an den die isländische Krone gekoppelt ist, aus dem Ecu (76 %), dem US-Dollar (18 %) und dem japanischen Yen (6 %) zusammen.

	3/92	6/92	9/92
Luxemburg	4,7	4,3	5,0
Niederlande	4,1	4,4	4,7
Portugal	4,0	1,9	1,8
Vereinigtes Königreich	5,5	5,1	5,6
USA	4,7	4,6	4,1
Japan	3,5	3,2	2,9

In Italien zogen die realen Renditen von Staatsanleihen im September kräftig an, als aufgrund der Wechselkursunsicherheiten die Nominalrenditen stiegen. Mit 10,5 % waren die realen Anleiherenditen in Italien im September rund 3 Prozentpunkte höher als in Dänemark, das an zweiter Stelle lag.

In Portugal, wo relativ niedrige Nominalrenditen mit einer hohen Inflationsrate zusammenstreffen, sind zur Zeit die niedrigsten realen Renditen in der EG zu verzeichnen. Am anderen Ende des Spektrums liegt Dänemark, wo Staatsanleihen extrem hohe reale Renditen erzielen, da relativ hohe Nominalrenditen mit einer niedrigen Inflationsrate (2 % im September, das ist gemeinschaftsweit der niedrigste Wert) einhergehen.

**GELDVOLUMEN: In vielen Ländern weiterhin geringes Geldmengenwachstum**

In vielen Ländern war in den vergangenen Monaten weiterhin nur ein geringes Geldmengenwachstum zu verzeichnen. In Frankreich war die jährliche Zuwachsrate der Geldmenge M2 in 11 der vergangenen 12 Monate negativ, während sich das Aggregat M3 auf das Jahr umgerechnet um rund 5,2 % ausweitete und damit innerhalb des Zielkorridors für 1992 von 4 %-6 % liegt. Das Wachstum der spanischen Geldmenge ALP hat sich in den letzten 8 Monaten stetig verlangsamt; über 12 Monate berechnet betrug es im August 4,9 % und lag damit erheblich unterhalb des Zielkorridors von 8 %-11 %. Auch in Irland, dem Vereinigten Königreich und den USA, wo die auf das Jahr umgerechnete Zuwachsrate des Aggregats M2 im Juni lediglich 1,8 % betrug, war das Geldmengenwachstum weiterhin nur gering. Nicht in allen Ländern verlief das Geldmengenwachstum jedoch so langsam. In diesem Zusammenhang ist insbesondere Deutschland zu nennen, wo sich das Aggregat M3 im August um 9,3 % ausweitete, wengleich dies verglichen mit der Zuwachsrate des Vormonats nur ein leichter Anstieg war. In Griechenland und Portugal liegt das Geldmengenwachstum zwischen 15 % und 18 %. Da sich das portugiesische Geldmengenaggregat L- im August gegenüber dem gleichen Vorjahresmonat um 17,5 % ausweitete, könnte der Zielkorridor von 12 %-16 % allerdings gerade eingehalten werden.

**AMTLICHE WÄHRUNGSRESERVEN: Kräftiger Anstieg der deutschen Währungsreserven**

Die deutschen Währungsreserven stiegen im September um mehr als 86 %, von 46,6 auf 86 Mrd. ECU. Dies ist darauf zurückzuführen, daß die Bundesbank während der Währungskrise Mitte September massiv intervenierte und D-Mark gegen andere Währungen des Wechselkursmechanismus verkaufte, die an den Devisenmärkten unter Druck geraten waren. Dies betraf vor allem das Pfund Sterling und die Lira, aber auch den französischen Franc.

Die Zentralbanken der betroffenen Länder sind verpflichtet, die Rückzahlung an die Bundesbank zu dem vor der Intervention gültigen Wechselkurs vorzunehmen, was im Fall der Lira und des Pfund Sterling große Verluste für die Zentralbanken mit sich bringen wird, da beide Währungen seit Mitte September erheblich an Wert verloren haben.

Die Währungsreserven der Länder, die am stärksten von den Währungsturbulenzen betroffen waren, sind natürlich zurückgegangen, wobei die aktuellen Zahlen allerdings nicht das wahre Ausmaß des Rückgangs widerspiegeln. Irland (-29 %) und Spanien (-18 %) verzeichneten im September die stärksten Abflüsse. Die Währungsreserven des Vereinigten Königreichs verringerten sich im September gegenüber dem Vormonat nur um 5 %, während in Italien ein Zuwachs zu verzeichnen war. Diese Zahlen berücksichtigen jedoch nicht die Verbindlichkeiten dieser Länder gegenüber dem Europäischen Fonds für währungspolitische Zusammenarbeit (EFWZ). Zudem erscheinen die Devisenankäufe auf dem Terminmarkt, die erst in einigen Monaten beglichen werden, noch nicht in den Angaben über die amtlichen Währungsreserven.

**VIERTELJÄHRLICHE GESAMTRECHNUNGEN: Zweites Quartal 1992: Leichte Abschwächung der Wirtschaft in der Gemeinschaft (BIP -0,2 %), bei unveränderter Inflation (+0,9 %)**

Im zweiten Quartal 1992 war die Wirtschaft der Gemeinschaft insgesamt durch eine leichte Abschwächung der Produktion (BIP -0,2 %) gekennzeichnet. Diese Abschwächung, die erste seit dem zweiten Quartal 1984, bestätigt die derzeitige schwierige Phase der Wirtschaft in der Gemeinschaft. Den Wirtschaftswissenschaftlern des MIT zufolge sind in der derzeitigen Situation keine Anzeichen für eine kurzfristige Erholung der Weltwirtschaft zu erkennen. Die Gründe für diese Phase der Unsicherheit wurden bereits in der vorangegangenen Veröffentlichung erörtert. An dieser Stelle erscheint es uns sinnvoll, aufzuzeigen, daß aus verschiedenen Gründen weder die Vereinigten Staaten noch Japan oder Deutschland als Motor des wirtschaftlichen Aufschwungs fungieren können. Durch die unterschiedlichen wirtschaftspolitischen Prioritäten der großen Industrieländer wird eine koordinierte Wirtschaftspolitik erschwert, die einem Aufschwung gewiß förderlich wäre. Darüber hinaus haben die durch Spekulationen hervorgerufenen Spannungen auf den Kapitalmärkten, die auch durch das Heranziehen der Zinssätze als Instrument der Wechselkurskontrolle begünstigt werden, zum zunehmenden Pessimismus bei den Investoren beigetragen.

Bei der am impliziten BIP-Deflator gemessenen Preisentwicklung ist eine unveränderte vierteljährliche Inflationsrate (+0,9 %) festzustellen, während sich die jährliche Inflationsrate deutlich verlangsamt hat (+4,0 %). Dieses Ergebnis bestätigt die Richtigkeit der in den meisten Mitgliedstaaten eingeleiteten restriktiven Geldpolitik, auch wenn im vergangenen Monat eine leichte Tendenz zur Zinssatzsenkung zu beobachten war, mit der darauf abgezielt wird, sowohl den wirtschaftlichen Aufschwung zu begünstigen als auch die spekulationsbedingten Spannungen auf den Devisenmärkten abzubauen.

Charakteristisch für die Entwicklung der Bestandteile des BIP ist in diesem Quartal ein erneuter Rückgang der Investitionstätigkeit (-1,8 %), zum dritten Mal in sechs Quartalen. Andererseits zeigen die ersten Ergebnisse für das zweite Quartal einen deutlichen Rückgang der Investitionstätigkeit (-0,1 %), eine Entwicklung, die die derzeitigen Probleme der Wirtschaft in der Gemeinschaft bestätigt. Die Gründe für diese Abwärtsentwicklung sind vor allem die hohen Zinssätze und die Schwierigkeiten, mit denen gegenwärtig einige Industriebranchen zu kämpfen haben, beispielsweise die Informatik- und die Verkehrsmittelbranche.

Was die Situation in den Mitgliedstaaten angeht, so ist ein Rückgang des Wirtschaftswachstums in Deutschland, dem Vereinigten Königreich, Dänemark und den Niederlanden (BIP -0,7 %, -0,1 %, -1,0 % bzw. -0,4 %) festzustellen.

In Italien und in Frankreich hingegen ist eine positive Entwicklung zu verzeichnen, die jedoch recht schwach ist (BIP +0,2 %). Bei den Inflationsraten ist im Vereinigten Königreich und in Dänemark ein deutliches Anziehen zu beobachten (+1,8 % bzw. +1,7 %), in Frankreich hingegen ein Rückgang (+0,7 %), während in den Niederlanden eine leichte Deflation zu verzeichnen ist (-0,1 %). Die markanteste Entwicklung auf der Nachfrageseite ist in diesem Quartal der deutliche Rückgang der Investitionstätigkeiten in allen Mitgliedstaaten. Dieser Rückgang war in Dänemark und den Niederlanden am stärksten (-6,9 % bzw. -3,9 %), in Frankreich dagegen schwächer (-0,6 %). In den Vereinigten Staaten ist eine Verlangsamung des Wirtschaftswachstums (+0,3 %) sowie ein Rückgang sowohl der vierteljährlichen als auch der jährlichen Inflationsraten (+0,6 % bzw. +2,6 %) festzustellen. Bei den Komponenten der Inlandsnachfrage ist im zweiten Quartal eine beträchtliche Zunahme der Investitionen (+2,9 %) zu verzeichnen, während die Entwicklung des Verbrauchs, und zwar sowohl des privaten als auch des Staatsverbrauchs, zu einem Stillstand gekommen ist (-0,1 % bzw. +0,1 %). Für Japan stehen Daten für das zweite Quartal 1992 zur Verfügung, und sie lassen eine merkliche Verlangsamung des Wirtschaftswachstums (+0,3 %) erkennen, die mit einer steigenden Inflation einhergeht, und zwar sowohl im vierteljährlichen als auch im jährlichen Vergleich (+0,7 % bzw. +1,9 %). Auf der Nachfrageseite war die bemerkenswerteste Entwicklung dieses Quartals die Stagnation sowohl des privaten als auch des Staatsverbrauchs (+0,0 % bzw. +0,1 %).

#### PREISE: Jahres-Inflationsrate der EG im Oktober unverändert bei 4 %

Die Jahres-Inflationsrate lag zwischen September und Oktober auf EG-Ebene unverändert bei 4 %. Somit blieb die Inflation gemeinschaftsweit während vier aufeinanderfolgenden Monaten auf nahezu gleichem Niveau: Juli 4,1 %, August 4,1 %, September 4,0 %, Oktober 4,0 %.

Der monatliche Index für EUR-12 stieg wie schon im Vormonat zwischen September und Oktober um 0,4 %.

In den einzelnen Mitgliedstaaten waren folgende monatliche Zuwachsraten zu verzeichnen: Spanien 0,1 %, Belgien, Dänemark\* und Niederlande 0,2 %, Bundesrepublik Deutschland und Frankreich 0,3 %, Vereinigtes Königreich und Portugal 0,4 %, Luxemburg 0,5 % und Italien 0,6 %.

Griechenland sah sich erneut mit einer sehr starken Zunahme konfrontiert: 2,4 % im Oktober nach 4,1 % im September. Der Vierteljahres-Index von Irland für Mitte November wird erst im nächsten Monat vorliegen.

Gegenwärtig sind bei 10 von 12 Mitgliedstaaten Jahres-Inflationsraten im Variationsbereich bis zu 2 % gegenüber dem EG-Durchschnitt von 4 % festzustellen.

Die Inflationsraten in den einzelnen Mitgliedsländern sind nachstehender Aufstellung zu entnehmen.

	Okt. 92	Okt. 91		Okt. 92	Okt. 91
	Okt. 91	Okt. 90		Okt. 91	Okt. 90
Dänemark*)	2,0 %	1,8 %	VK	3,6 %	3,7 %
Belgien	2,2 %	2,2 %	BR Deutschland***)	3,7 %	3,5 %
Frankreich	2,4 %	2,5 %	Italien	4,7 %	6,0 %
Irland**)	2,8 %	3,5 %	Spanien	5,2 %	5,5 %
Luxemburg	3,2 %	2,4 %	Portugal	9,0 %	9,2 %
Niederlande	3,3 %	4,5 %	Griechenland	15,9 %	17,7 %

Die entsprechenden Inflationsraten in den Vereinigten Staaten und in Japan liegen bei 3,2 % (2,9 %) bzw. 1,0 % (2,7 %).

\*) Eurostat-Schätzung für Dänemark.

\*\*\*) August 92/August 91 für Irland.

Der Verbraucherpreisindex für die BR-Deutschland bezieht sich weiterhin auf die Bundesrepublik in ihren Grenzen vor dem 3. Oktober 1990.

#### INDUSTRIEPRODUKTION: Rezession verschärft

Betrachtet man für die Industrieproduktion der Europäischen Gemeinschaft (EUR 12) die neuesten Daten von August 1992, so erkennt man, daß die Rezession sich verstärkt. In allen Güterbereichen ist eher eine abnehmende Produktionstätigkeit beobachtbar. Der arbeitstäglich bereinigte Produktionsindex der Industrie belief sich im August für die Europäische Gemeinschaft auf 83,7 (1985=100). Dies entspricht einer Veränderungsrate des Index gegenüber dem Augustwert des letzten Jahres von -1,8 %. Nach Saisonbereinigung beträgt der Produktionsindex für August 112,3; im Juli war er bei 114,0. Verglichen mit dem kumulierten Wert der Monate März, April und Mai veränderte sich die saisonbereinigte Industrieproduktion in der EG in den letzten drei verfügbaren Monaten (Juni, Juli, August) um -1,2 %. Auch die Auftragseingänge der Europäischen Gemeinschaft, die die zukünftige Produktionsentwicklung zeigen, bestätigen das Bild einer verschärften Rezession: für Mai/Juni betrug die Veränderungsrate der Auftragseingänge (geschätzt) -1,3 % gegenüber dem Vorjahreswert, für Juli/August betrug die entsprechende Veränderungsrate -3,8 %.

Für die einzelnen Mitgliedstaaten der EG ergibt sich für die saisonbereinigte Industrieproduktion folgendes Bild (Veränderungsrate der letzten drei Monate gegenüber den Vormonaten): Dänemark +2,5 %, Vereinigtes Königreich +0,1 %, Belgien -0,2 % (geschätzt), Frankreich -0,9 %, Spanien -1,3 %, Irland -1,4 % (geschätzt), Deutschland (West) -1,5 %, Griechenland -1,9 % (geschätzt), Italien -2,3 %, Niederlande -2,4 %. Demnach sinkt in sehr vielen Mitgliedstaaten die Produktion.

In den USA steigt die Industrieproduktion mit einer Rate von 0,5 % (Veränderungsrate der letzten drei Monate gegenüber den Vormonaten); in Japan setzt sich mit der Veränderungsrate von -1,1 % (geschätzt) der Abschwung der Industrieproduktion fort.

Demnach ist in den USA eine leichte Erholung beobachtbar, während in der EG und in Japan im Industriebereich deutlich sinkende Produktion zu verzeichnen ist.

Nach großen Gütergruppen unterteilt ergibt sich für EUR 12:

Grundstoffindustrie: -1,4 %

Investitionsgüterindustrie: -2,1 %

Konsumgüterindustrie: -0,4 %

In einzelnen Industriezweigen sinkt die Produktion auf europäischer Ebene überdurchschnittlich im Elektro- und Elektronikbereich (einschl. EDV) und im Fahrzeugbau.

#### ZAHLUNGSBILANZ - Gesamttendenzen - vorläufige Zahlen für das zweite Quartal 1992:

Die Leistungsbilanz der Gemeinschaft verschlechterte sich gegenüber dem gleichen Vorjahreszeitraum um 3,8 Mrd. ECU und schloß mit einem Defizit von 16,7 Milliarden ECU ab. Die Leistungsbilanz der Vereinigten Staaten verzeichnete ein Defizit von 12,5 Mrd. ECU, was eine Verschlechterung von 16 Mrd. ECU bedeutet. In Japan stieg der Überschuß um 7,1 Mrd. ECU auf 22,6 Mrd. ECU.

Die Verschlechterung des Gemeinschaftsergebnisses ist auf das um 7 Mrd. ECU gestiegene Defizit der Dienstleistungs- und Übertragungsbilanz zurückzuführen, bei einer Verbesserung der Handelsbilanz um 4,2 Mrd. ECU. Diese Veränderungen sind vor allem auf die deutsche Leistungsbilanz zurückzuführen: Dort stieg der Handelsbilanzüberschuß um 3,5 Mrd. ECU, während sich der Saldo der Dienstleistungsbilanz um 3,4 Mrd. ECU verschlechterte, was zu 50 % auf die Reisebilanz zurückzuführen ist. Im übrigen verbesserte sich die französische Handelsbilanz um 2,8 Mrd. ECU, während sich im Vereinigten Königreich die Handelsbilanz um 1,6 Mrd. ECU und die Dienstleistungs- und Übertragungsbilanz um 2 Mrd. ECU verschlechterte (im zweiten Quartal 1991 hatte das Vereinigte Königreich im Zusammenhang mit dem Golfkrieg beträchtliche Übertragungen erhalten).

In den Vereinigten Staaten schloß die Leistungsbilanz im zweiten Quartal 1992 mit einem Defizit von 12,5 Mrd. ECU ab, nachdem sie im gleichen Vorjahreszeitraum noch einen Überschuß von 3,5 Mrd. ECU ausgewiesen hatte. Das Handelsbilanzdefizit stieg von 11 Mrd. ECU auf 16,3 Mrd. ECU, während der Überschuß der Dienstleistungs- und Zahlungsbilanz von 14,6 Mrd. ECU auf 3,8 Mrd. ECU sank, was wiederum auf erhebliche Übertragungen im Zusammenhang mit dem Golfkrieg zurückzuführen ist. Würde man das Niveau von 1990 zugrundelegen, hätte sich der Saldo der Dienstleistungs- und Übertragungsbilanz eher verbessert.

In Japan betrug der Leistungsbilanzüberschuß im zweiten Quartal 1992 22,6 Mrd. ECU gegenüber 15,7 Mrd. ECU im gleichen Vorjahreszeitraum. Der Handelsbilanzüberschuß nahm um 5,2 Mrd. ECU zu; das Defizit der Dienstleistungs- und Übertragungsbilanz verringerte sich um 3,1 Mrd. ECU.

#### AUSSENHANDEL

Im Juli 1992 belief sich das Defizit im außergemeinschaftlichen Handel auf 2 Mrd. ECU gegenüber 5,3 Mrd. ECU im gleichen Monat des Vorjahres. Das schlechte Ergebnis vom Juli 1991 ist auf die Zunahme der Einfuhren nach dem Golfkrieg zurückzuführen, die nicht durch zunehmende Ausfuhren ausgeglichen wurden. Frankreich hatte mit einem Überschuß von 1,4 Mrd. ECU zur Verbesserung des Saldos beigetragen. Ebenfalls verbesserten sich die Salden Deutschlands (0,6 Mrd. ECU), Italiens (0,5 Mrd. ECU) und der Niederlande (0,3 Mrd. ECU). Die Einfuhren gingen gegenüber Juli 1991 um 5,7 % zurück. Die Ausfuhren stiegen im Juli 1992 um 2 %, d. h. nicht so deutlich wie die Einfuhren nach dem Golfkrieg. Die Rohöllieferungen in die Gemeinschaft verteuerten sich gegenüber Juli 1991 in Dollar um 9 % je Barrel. In Ecu gerechnet sank der Rohölpreis jedoch um 7 % aufgrund des rückgängigen Dollarkurses.

Das Handelsbilanzdefizit der Vereinigten Staaten lag im Juli 1992 bei 8,7 Mrd. ECU, das sind 0,5 Mrd. ECU mehr als im gleichen Monat des Vorjahres. Die Einfuhren gingen in Ecu ausgedrückt um 7,3 % zurück, in Dollar stiegen sie um 9 %. Demgegenüber sanken die Ausfuhren in Ecu ausgedrückt um 11,2 %, während sie in Dollar um 5 % stiegen.

In Japan stieg der Handelsbilanzüberschuß von Juli 1991 bis Juli 1992 um 0,5 Mrd. ECU auf 6,2 Mrd. ECU. Die Einfuhren sanken in Ecu ausgedrückt um 12,1 %, in Yen um 3 %; stiegen jedoch in Dollar ausgedrückt um 4 %. Die Ausfuhren gingen in Ecu ausgedrückt um 6,8 % zurück, das entspricht einer Zunahme von 1 % in Yen und von 10 % in Dollar.

Im Juli 1992 wies die italienische Handelsbilanz mit 0,8 Mrd. ECU den höchsten Überschuß auf, nachdem sie im Juli 1991 nahezu ausgeglichen war. Deutschland und Irland verzeichneten Überschüsse von jeweils 0,5 Mrd. ECU, was einer Verbesserung um 0,5 bzw. 0,3 Mrd. ECU entspricht. Auch Dänemark schloß im Juli 1992 mit einem Überschuß ab (0,2 Mrd. ECU). Frankreich und die BLWU verzeichneten leichte Defizite, obwohl sich ihre Salden gegenüber Juli 1991 um 1,3 Mrd. ECU bzw. 0,3 Mrd. ECU verbesserten. Das Defizit der Niederlande war mit 0,4 Mrd. ECU nur halb so hoch wie im Juli 1991. Die Defizite von Portugal und Griechenland lagen jeweils bei knapp 1 Mrd. ECU; das griechische Defizit verschlechterte sich gegenüber Juli 1991 um 0,4 Mrd. ECU. Spanien und das Vereinigte Königreich verzeichneten Defizite von 2,3 Mrd. ECU bzw. 2,7 Mrd. ECU. In Spanien hielt es sich etwa auf dem Vorjahresniveau, während es im Vereinigten Königreich um 0,7 Mrd. ECU zunahm.

*Eurostatistics – data for short-term economic analysis* – is a monthly publication aimed at providing, as rapidly as possible, the latest statistical data on the European Community as a whole (EUR 12), each Member State, the United States and Japan.

*Eurostatistics* does not present all the statistics held by Eurostat, but a selection of the most relevant series on the economic situation.

The series are published for the last 15 months, the last five quarters and the last four years, thus permitting short- or medium-term analysis with figures that may have been revised where necessary.

Speed of publication and punctuality are the main features of this publication; that is why it is deliberately streamlined and does not contain any methodological notes, which are given in Eurostat's specialized publications.

*Eurostatistics* comprises three sections:

- The 'In brief' section outlines the main recent events and trends in the economic, financial and social fields.
- The 'Graphs' section illustrates the most significant economic series for the Community, its Member States, the United States and Japan.
- The 'Short-term trends' section presents data harmonized by Eurostat on the basis of common criteria for the Member States as a whole, with comparisons with the USA and Japan.

The data published in *Eurostatistics* are taken from the ICG domain of Eurostat's on-line data bank, Cronos.

By linking up to Cronos it is possible to obtain daily the tables presented in this publication, containing data updated daily. The method of consultation can be found at the end of this publication.

Further information about *Eurostatistics* can be obtained from the following address:

Eurostat – Directorate A

**EXCHANGE RATES: Further changes in ERM parities**

There was a further change in parities within the exchange rate mechanism (ERM) of the EMS on November 22, when the EC Monetary Committee announced that the Spanish peseta and Portuguese escudo had been devalued by 6% against the other ERM currencies (Deutschmark, French and Belgian franc, guilder, Danish krone and Irish punt). It was also announced that Spain would lift the capital controls which were imposed during the currency upheavals in September.

The devaluation followed the suspension of the Swedish krona's link to the ecu (see below) and speculation against the Spanish, Danish and Irish currencies during the previous week. The peseta had already been devalued by 5% in September.

The immediate effect of these parity changes was a period of further exchange rate tensions, with the Danish krone and Irish punt in particular coming under attack on November 23. The central banks of Denmark and Ireland reacted by pushing up overnight interest rates to around 50% and 30% respectively. Rates were also increased in Spain (intervention rate up 0.75% to 13.75%), Portugal (rate at which liquidity is supplied to banks up to 20%) and Norway (overnight lending rate up to 25% from 17%); in the latter case, the central bank is attempting to maintain the krona's link to the ecu. The Icelandic krone, which is linked to a basket of currencies, was also devalued by 6%.<sup>1</sup>

The exchange rate tensions continued on November 24, when Irish overnight rates increased still further to 75%, and the Irish punt touched its ERM floor against the Belgian franc, the strongest of the narrow band currencies. The French franc also weakened, falling to its lowest level against the Deutschmark since mid October, despite intervention from the Banque de France.

Prior to these increases in interest rates there had been several reductions in rates in various EC countries. On November 12, UK base rates were reduced by 1% to 7%, and on the same day, the Banca d'Italia announced a 1% cut in its discount rate to 13%, following a reduction of 1% on October 26, and the Banque de France reduced its intervention rate (the rate at which it lends to commercial banks) by 0.25% to 9.1%. This rate had earlier been reduced by 0.25% on November 2, which had been the first reduction in French interest rates since December 1991. Sterling and the lire had not rejoined the ERM at the time of writing, and, particularly in the case of sterling, stood at a level a long way from its previous DM central rate.

The uncertainties within the ERM meant that the dollar appreciated further against European currencies, having already strengthened against most currencies in October and the first half of November. Although not back to the levels of earlier in the year, by November 23 it stood at DM 1.602, an appreciation of over 15% on its low of DM 1.3905 reached on September 2. Over the same period, the dollar's appreciation against sterling and the lire, both relatively weak in recent months, has been even more pronounced: a 24% rise against sterling and 28% against the lire.

As mentioned above, having survived a period of intense pressure in September, albeit through the use of extremely high overnight interest rates, on November 19 the Swedish Riksbank was forced to suspend the krona's link to the ecu following a week of capital outflows from Sweden. Interest rates were momentarily increased before it became clear that on this occasion this policy would not work. The immediate effect was an effective devaluation against the DM of 9.4%; Norway is currently the only Scandinavian non-EC country to maintain its ecu link, following Finland's suspension in September.

**GOVERNMENT BOND YIELDS: Large fall in German government bond yields**

The nominal yield on German government bond yields fell from 8% in September to 7.4% in October, and now stands at its lowest level since October 1989, just before the fall of the Berlin Wall. Yields stood at 9% or over for 6 months between August 1990 and January 1991, before falling gradually to their present level.

There were falls too in the government bond yields of the other countries whose currencies emerged intact from September's exchange rate turmoils: Dutch bond yields fell from 8.2 to 7.6%, Belgian's from 8.8 to 8.3%, France's from 9 to 8.6%. After increasing in the period after their 'no' vote in the referendum on the Maastricht treaty, Denmark's bond yields fell from 9.5 to 9% in October.

The bond yields of countries with weaker ERM currencies, or indeed with currencies which are no longer ERM members, generally remain at fairly high levels, and in certain cases are rather higher than before the currency turmoils: Spanish bond yields increased to 13.6% in October, from 13.1% in September and 12.7% in August, and although Italian bond yields fell from 15.2 to 14% in October, this has to be viewed against the rise from 12 to 15% which occurred in September.

The real (inflation adjusted) yield on government bonds can be seen in the following table:

**Real Long term Interest Rates (monthly averages)**

	3/92	6/92	9/92
Belgium	6.1	6.3	6.5
Denmark	6.1	6.7	7.5
Germany	3.3	4.0	4.4
Spain	4.5	5.5	7.3
France	5.9	6.2	6.4
Italy	6.2	6.6	10.5
Luxembourg	4.7	4.3	5.0
Netherlands	4.1	4.4	4.7
Portugal	4.0	1.9	1.8
UK	5.5	5.1	5.6
US	4.7	4.6	4.1
Japan	3.5	3.2	2.9

A sharp increase in real government bond yields occurred in Italy in September, when nominal bond yields increased during the period of exchange rate uncertainty. At 10.5%, Italian real government bond yields in September were some 3 percentage points higher than in Denmark, the EC country with the next highest yields.

Within the EC, real yields are currently lowest in Portugal, where relatively low nominal yields are matched with high inflation. At the other end of the spectrum, Denmark continues to experience extremely high levels of real long-term government bond yields as a result of the combination of relatively high nominal yields and inflation which, at 2% in September, is currently the lowest of any EC country.

<sup>1</sup> As of January 1 1992, the basket to which the Icelandic krone is linked is made up of the ecu (76%), the US dollar (18%) and the Japanese yen (6%).

**MONEY SUPPLY: Monetary growth remains slow in many economies**

Monetary growth has remained slow in many economies for the last few months. In France, the annualised growth rate of M2 has been negative for 11 of the last 12 months whilst M3 is growing at an annualised rate of around 5.2%, within its 1992 target range of 4-6%. Spanish ALP growth has slowed progressively for the last 8 months: in the year to August it stood at 4.9%, well below the target range of 8-11%. Monetary growth also remains slow in Ireland, the UK and in the US, where M2 growth in the year to June stood at only 1.8%.

However, there are several exceptions to this picture of sluggish growth, the most prominent of which is Germany, where in the year to August M3 grew by 9.3%, although this was only slightly up on August's figure. In Greece and Portugal monetary growth varies between 15 and 18%; although the Portuguese target of annualised growth of L- in the range 12-16% by the end of 1992 may just be achieved since in the year to August growth was 17.5%.

**FOREIGN OFFICIAL RESERVES: Large increase in Germany's reserves**

Germany's reserves increased by over 86% in September, rising from 46.6 to 86 billion ecu. This occurred as a result of the massive intervention undertaken during the currency turmoil in mid September, when the Bundesbank sold deutschmarks for ERM currencies which were under pressure in the foreign exchange markets. The largest purchases were of sterling and lire, but additionally included the French franc.

The central banks of the currencies concerned are obliged to repay the Bundesbank at the exchange rate prevailing before the intervention took place, which in the case of the lire and sterling means that these two central banks will be faced with a large loss, since both currencies have depreciated substantially since mid September.

The reserves of the countries most affected by the currency upheavals have of course seen their reserves fall, although current figures do not indicate the true extent of the fall. The largest outflow in September was from Ireland (-29%) and from Spain (-18%). The UK's reserves fell by only 5% in September as compared with August, and Italy's reserves actually increased, but the figures given here do not include these countries' liabilities to the European Monetary Co-operation fund (EMCF). Additionally, currency purchases made on the 'forward market', which will be settled in several months' time, are not yet apparent in the official reserves data.

**QUARTERLY ACCOUNTS: Second quarter of 1992: slight downturn in the Community economy (GDP -0.2%); no change in inflation (+0.9%)**

In the second quarter of 1992, the Community economy as a whole suffered a slight fall-off in production (GDP -0.2%). This fall-off, the first since the second quarter of 1984, highlights the Community's current economic difficulties. According to MIT economists, there is at present no sign of an upturn in the world economy in the short-term. The reasons for this period of uncertainty were discussed in the last issue of this publication. It would be useful in this issue to look at why, for different reasons, neither the United States, Japan nor Germany can lead the way to economic revival. Differences in the priorities of the larger countries' economic policies make it difficult to coordinate economic policy and thus increase the chances of an upturn. Furthermore, the tension caused by speculation on the financial markets, and exacerbated by the use of interest rates to control exchange rates, has helped increase pessimism among investors.

As regards price trends, as measured by the implicit deflator of GDP, the quarterly rate of inflation remained unchanged (+0.9%), while there was an appreciable slowing-down in the annual rate (+4.0%). These results confirm the effectiveness of the restrictive monetary policies adopted in most of the Member States, although in the final month there was a slight tendency for interest rates to be reduced. This was done both to encourage an economic upturn and to reduce the tensions caused by speculation on the currency markets.

As for the components of GDP, the most salient feature of the quarter was the renewed drop in investments (-1.8%) - the third in six quarters. Otherwise, the preliminary results for the second quarter show an appreciable drop in investments (-0.1%), which confirms the current difficulties facing the Community economy. This drop is caused mainly by the high interest rates and the difficulties being experienced by certain sectors of industry, such as the computer and vehicle manufacturing industries.

In the Member States there was a fall in economic growth in Germany, the United Kingdom, Denmark and the Netherlands (GDP down by 0.7%, 0.1%, 1.0% and 0.4% respectively). In Italy and France, on the other hand, there was a slight improvement (GDP +0.2%). Inflation rose appreciably in the United Kingdom and Denmark (+1.8% and +1.7% respectively). However, in France there was a reduction (+0.7%), while in the Netherlands there was slight deflation (-0.1%). As far as demand was concerned, the main feature this quarter was the marked drop in investments in all the Member States. This was most pronounced in Denmark and the Netherlands (-6.9% and -3.9% respectively) while France was the least affected (-0.6%).

In the United States there was a slowing-down in economic growth (+0.3%) and in the quarterly and annual inflation rates (+0.6% and +2.6% respectively). As for the components of domestic demand, there was appreciable growth in investments in the second quarter (+2.9%), while both private and public consumption remained unchanged (-0.1% and +0.1% respectively).

In Japan, for which data are available for the second quarter of 1992, there was a significant slowing-down in economic growth (+0.3%) combined with an increase in inflation in both quarterly and annual terms (+0.7% and +1.9% respectively). The salient feature of demand in the second quarter was the stagnation in both private and public consumption (+0.0% and +0.1% respectively).

**PRICES: EC annual inflation rate remains at 4.0% in October**

The annual inflation rate for the EC remained unchanged between September and October at a level of 4.0%, thus showing the near stability of inflation for the Community as a whole during four consecutive months: July 4.1%, August 4.1%, September 4.0%, October 4.0%.

The monthly index for EUR-12 rose by 0.4% from September to October, the same increase as last month.

For the individual Member States the monthly rates of increase were as follows: Spain 0.1%, Belgium, Denmark (\*) and the Netherlands all 0.2%. Germany and France 0.3%, United Kingdom and Portugal 0.4%, Luxembourg 0.5% and Italy 0.6%.

Greece again recorded a sharp rise: 2.4% in October following a 4.1% rise in September.

The quarterly index of Ireland for mid-November will only be available next month. At present 10 of the 12 Member States have annual inflation rates within 2 percentage points of the EC average (4.0%).

The rates for the different Member States are as follows:

	Oct. '92 Oct. '91	Oct. '91 Oct. '90		Oct. '92 Oct. '91	Oct. '91 Oct. '90
Denmark*	2.0%	1.8%	United Kingdom	3.6%	3.7%
Belgium	2.2%	2.2%	Germany***	3.7%	3.5%
France	2.4%	2.5%	Italy	4.7%	6.0%
Ireland**	2.8%	3.5%	Spain	5.2%	5.5%
Luxembourg	3.2%	2.4%	Portugal	9.0%	9.2%
Netherlands	3.3%	4.5%	Greece	15.9%	17.7%

The corresponding figures for the United States and Japan are 3.2% (2.9%) and 1.0% (2.7%) respectively.

\* Eurostat estimate for Denmark

\*\* August '92/August '91 for Ireland.

\*\*\* The CPI for the Federal Republic of Germany continues to reflect the geographic borders prior to 3 October 1990.

### INDUSTRIAL PRODUCTION: Recession deepens

The latest figures on industrial production in the European Community (EUR12) in August 1992 reveal a worsening of the recession. There was a noticeable decline in production of all types of goods. The industrial production index for EUR 12, adjusted for the number of working days, was 83.7 (1985 = 100) in August 1992, representing a rate of change of -1.8% compared with August 1991. After seasonal adjustment, the index for August was 112.3; in July it was 114.0. The seasonally adjusted figure for EUR 12 production in the last three months for which figures are available (June, July, August) showed a fall of -1.2% over the cumulative figure for March, April and May. New orders in EUR 12, which indicate the future trend of production, also confirm the deepening of the recession: the estimated rate of change for May/June was -1.3%, compared with the same period in 1991, and for July/August it was -3.8%.

The seasonally adjusted 22 figures for industrial production in the Member States were as follows (rate of change for the past three months compared with the previous three months): Denmark +2.5%, United Kingdom +0.1%, Belgium -0.2% (estimated), France -0.9%, Spain -1.3%, Ireland -1.4% (estimated), Germany (West) -1.5%, Greece -1.9% (estimated), Italy -2.3% and Netherlands -2.4%. Production is therefore falling in very many Member States.

In the USA, industrial production rose by 0.5% (rate of change for the past three months compared with the previous three months), while in Japan the downturn in industrial production continued at a rate of -1.1% (estimated).

A slight recovery can therefore be detected in the USA, while industrial production in EUR 12 and Japan is falling appreciably.

The figures for EUR 12 by major product group were as follows:

Raw materials: -1.4%; Capital goods: -2.1%; Consumer goods: -0.4%.

In the individual industrial sectors, the fall in production at European level was above average in the electrical engineering and electronics sector (including EDP) and in manufacturing of vehicles.

### BALANCE OF PAYMENTS – world trends – preliminary figures for the second quarter, 1992:

The Community's current account showed a deficit of 16.7 billion (thousand million) ECU, 3.8 bn worse than in the corresponding quarter of 1991. The United States' current balance showed a deficit of 12.5 bn ECU, having deteriorated by 16 bn Japan's current account, in surplus by 22.6 bn ECU, improved by 7.1 bn.

According to preliminary figures, in the second quarter of 1992 the Community's current balance was in deficit by 16.7 bn ECU, a deterioration of 3.8 bn compared with the second quarter of 1991. This deterioration is the result of a 7 bn worsening in the deficit on invisibles, partially offset by an improvement of 4.2 bn in the balance of trade. These variations are largely due to the German balance which, during the quarter under review, showed an improvement of 3.5 bn on the balance of trade surplus and a deterioration of 3.4 bn on the services account. Half of this came from travel. Elsewhere, France's trade balance improved by 2.8 bn, whilst Britain's balances on both trade and invisibles worsened, by 1.6 bn and 2 bn respectively. During the second quarter of 1991 the United Kingdom had received substantial transfers in connection with the Gulf War.

In the United States the current balance showed a deficit of 12.5 bn ECU, compared with a surplus of 3.5 bn in the corresponding quarter of 1991. The trade deficit was 16.3 bn (11 bn in the second quarter of 1991) and the surplus on invisibles 3.8 bn (14.6 bn). The deterioration in invisibles is essentially due to transfers, which in the second quarter of 1991 were particularly advantageous to the United States because of payments in connection with the Gulf War. If we compare 1992 with the figures for 1990, the balance on invisibles seems to be improving slightly.

Japan's current surplus reached 22.6 bn ECU in the second quarter of 1992, compared with 15.7 bn in the corresponding quarter of 1991. The trade balance improved by 5.2 bn, and the deficit on invisibles narrowed by 3.1 bn.

### EXTERNAL TRADE

In July 1992, the extra-Community trade balance showed a deficit of ECU2 billion compared with ECU 5.3 billion for the same month in 1991. However, the July 1991 balance had suffered seriously from the upswing in imports following the Gulf War, which was not offset by an increase in exports. France's extra-Community trade balance contributed ECU 1.4 billion to improving the Community's trade balance compared with July 1991. The balances of Germany, Italy and the Netherlands also improved, by ECU 0.6 billion, ECU 0.5 billion and ECU 0.3 billion respectively. Imports from outside the Community dropped by 5.7% from the high level of July 1991. Exports increased less than imports following the Gulf War, but nevertheless rose by 2% in July 1992.

The cost of the Community's crude oil supplies was 9% higher than in July 1991 in terms of dollars per barrel. In terms of ecus, however, it was 7% lower as a result of the depreciation of the dollar against the ecu.

The United States' trade deficit was ECU 8.7 billion in July 1992 - 0.5 billion more than in the same month of 1991. US imports were down 7.3% in ecus, which corresponds to an increase of 9% in dollars. Exports were down by 11.2% in ecus but up by 5% in dollars compared with their July 1991 level.

Japan had a surplus of ECU 6.2 billion in July 1992 0.5 billion up on July 1991. Japanese imports dropped by 12.1% in ecus or 3% in yen, but increased by 4% in dollars. Exports were down by 6.8% in ecus, which corresponds to an increase of 1% in yen and 10% in dollars.

Italy's total trade surplus was the highest in July 1992 with ECU 0.8 billion compared with near equilibrium in July 1991. Germany and Ireland had surpluses of some ECU 0.5 billion each, representing an improvement of ECU 0.5 billion and ECU 0.3 billion respectively. Denmark also had a surplus in July 1992 (ECU 0.2 billion). France and the BLEU had slight deficits in July 1992 in spite of increases of ECU.3 billion and 0.3 billion over July 1991. The Netherlands halved its total deficit to a figure of 0.4 billion in July 1992. Portugal and Greece had deficits of less than ECU 1 billion, Greece's trade balance having deteriorated by ECU 0.4 billion compared with July 1991. Spain and the United Kingdom had total trade deficits of ECU 2.3 billion and ECU 2.7 billion respectively, Spain's being similar to the figure for July 1991 while the United Kingdom's deficit had increased by ECU 0.7 billion.

«Eurostatistiques – Données pour l'analyse de la conjoncture» est une publication mensuelle qui a comme but de fournir dans les meilleurs délais les données statistiques les plus récentes pour la Communauté européenne en tant qu'ensemble (EUR 12), pour les pays membres ainsi que pour leurs principaux partenaires extracommunautaires (États-Unis d'Amérique et Japon).

«Eurostatistiques» ne publie pas d'une manière exhaustive toutes les statistiques disponibles auprès d'Eurostat, mais les importantes parmi celles-ci.

Afin de permettre des analyses diverses et, si nécessaire, à plus long terme, sont publiées généralement des données annuelles sur une période de quatre ans, des données trimestrielles pour les cinq derniers trimestres et des données mensuelles pour les quinze derniers mois disponibles.

Cette publication se veut rapide et facilement maniable. Pour cette raison, elle ne comporte pas de notes méthodologiques, disponibles d'ailleurs dans les publications spécialisées d'Eurostat.

«Eurostatistiques» contient trois types d'informations, actualisés mensuellement:

- la rubrique «en bref» commente les principaux événements et tendances résultant des évaluations récentes;
- la partie «Graphiques» illustre les séries économiques les plus importantes pour la Communauté, les États membres, les États-Unis et le Japon;
- la partie «Données conjoncturelles» présente des données harmonisées par Eurostat sur la base des critères communs, pour l'ensemble des États membres et avec des comparaisons avec les États-Unis et le Japon;

Les données publiées dans «Eurostatistiques» proviennent du domaine «ICG» de la base de données Cronos.

En se connectant à Cronos, il est possible de suivre la mise à jour des tableaux de cette publication journalièrement en consultant les données en temps réel. Le mode de consultation «on line» se trouve à la fin de cette publication.

Sauf indications contraires, les données portent sur le territoire de la République fédérale d'Allemagne avant le 3.10.1990, Berlin-Ouest inclus.

**TAUX DE CHANGE: Nouvelles modifications dans les parités du MTC**

On a noté de nouvelles modifications des parités au sein du mécanisme des taux de change (MTC) du SME le 22 novembre lorsque le comité monétaire de la CE a annoncé que la peseta espagnole et l'escudo portugais avaient été dévalués de 6 % par rapport aux autres monnaies du MTC (Deutschemark, franc français et franc belge, florin, couronne danoise et livre irlandaise). Il a également été dit que l'Espagne supprimerait le contrôle des capitaux imposé pendant la crise monétaire de septembre.

La dévaluation a suivi la suspension du lien entre la couronne suédoise et l'écu (voir ci-après) et la spéculation contre les monnaies espagnole, danoise et irlandaise au cours de la semaine précédente. La peseta avait déjà été dévaluée de 5 % en septembre.

Ces modifications de parité se sont immédiatement traduites par une tension sur les taux de change, la couronne danoise et la livre irlandaise ayant été particulièrement attaquées le 23 novembre. Les banques centrales du Danemark et de l'Irlande ont réagi en augmentant les taux d'intérêt au jour le jour à, respectivement, 50 % et 30 % environ. Les taux ont également été augmentés en Espagne (le taux d'intervention est passé de 13,75 % soit une hausse de 0,75 %), au Portugal (le taux auquel les liquidités sont fournies aux banques a été fixé à 20 %) et en Norvège (le taux de prêt au jour le jour est passé de 17 à 25 %); dans ce dernier cas, la banque centrale a tenté de maintenir le lien entre la couronne et l'écu. La couronne islandaise, qui est liée à un panier de monnaies, a également été dévaluée de 6 % (1).

Les tensions sur les taux de change se sont poursuivies le 24 novembre lorsque les taux à court terme de l'Irlande ont continué à augmenter pour se fixer à 75 % et que la livre irlandaise a atteint son cours plancher dans le MTC par rapport au franc belge, la plus forte des monnaies de la bande étroite. Le franc français s'est également affaibli, tombant à son niveau le plus bas par rapport au Deutschemark depuis la mi-octobre, en dépit de l'intervention de la Banque de France.

Avant que n'interviennent ces augmentations des taux d'intérêt, il y avait eu plusieurs réductions des taux dans différents pays de la CE. Le 12 novembre, les taux de base du Royaume-Uni ont été réduits de 1 % pour atteindre 7 % et le même jour, la Banque d'Italie annonçait une réduction de 1 % de son taux d'escompte qui passait à 13 %, après une baisse de 1 % le 26 octobre; la Banque de France a réduit son taux d'intervention (taux auquel elle prête aux banques commerciales) de 0,25 % qui s'est établi à 9,1 %. Précédemment, ce taux avait été réduit de 0,25 % le 2 novembre et représentait la première réduction des taux d'intérêt français depuis décembre 1991. Le sterling et la lire n'avaient pas rejoint le MTC au moment de la rédaction de ce document; en ce qui concerne, en particulier, le sterling, cette monnaie se situait à un niveau très éloigné de son taux central antérieur vis-à-vis du DM.

Les incertitudes au sein du MTC montraient que le dollar s'appréciait de nouveau par rapport aux monnaies européennes; si s'était déjà renforcé vis-à-vis de la plupart des monnaies en octobre et au cours de la première quinzaine de novembre. Bien que n'étant pas revenu aux niveaux atteints précédemment au cours de l'année, le 23 novembre il était égal à DM 1,602, soit une appréciation de plus de 15 % par rapport au 2 septembre où il était tombé à DM 1,3905. Pendant cette même période, l'appréciation du dollar par rapport au sterling et à la lire – deux monnaies relativement faibles ces derniers mois – a même été plus marquée: augmentation de 24 % par rapport au sterling et de 28 % par rapport à la lire.

Comme on l'a dit plus haut, après avoir réussi à survivre à une période de tensions intenses en septembre – au prix, il est vrai, de taux d'intérêt au jour le jour extrêmement élevés – la Riksbank suédoise a été obligée, le 19 novembre, de suspendre le lien entre la couronne et l'écu au terme d'une semaine au cours de laquelle il y a eu baisse des réserves de la Suède. Les taux d'intérêt ont été momentanément augmentés avant que l'on s'aperçoive que cette politique ne produirait pas les résultats voulus dans ce cas. La conséquence immédiate a été une dévaluation effective de 9,4 % par rapport au DM; actuellement, la Norvège est le seul pays scandinave non membre de la Communauté à maintenir son lien avec l'écu après l'exclusion de la Finlande en septembre.

**RENDEMENT DES OBLIGATIONS D'ETAT: Baisse importante des rendements en Allemagne**

Le rendement nominal des obligations d'Etat en Allemagne est passé de 8 % en septembre à 7,4 % en octobre et se situe maintenant à son niveau le plus bas depuis octobre 1989, juste avant la chute du mur de Berlin. Les rendements atteignaient à 9 % ou plus pour les six mois qui se sont écoulés entre août 1990 et janvier 1991, avant de baisser progressivement vers leurs niveaux actuels.

On a également constaté des baisses dans les rendements des obligations d'Etat des autres pays dont les monnaies sont sorties indemnes des bouleversements de septembre ayant affecté les taux de change: les rendements des obligations d'Etat en Hollande sont passés de 8,2 à 7,6 %, en Belgique de 8,8 à 8,3 % et en France de 9 à 8,6 %. Après avoir augmenté au cours de la période qui a suivi le «non» au référendum sur le traité de Maastricht, les rendements des obligations d'Etat au Danemark sont passés de 9,5 à 9 % en octobre.

Les rendements des obligations d'Etat des pays à monnaie plus faible MTC ou même dont les monnaies ne font plus partie du MTC, restent généralement à des taux assez élevés et dans certains cas, ils sont même plus élevés qu'avant la crise monétaire: les rendements des obligations d'Etat de l'Espagne ont atteint 13,6 % en octobre contre 13,1 % en septembre et 12,7 % en août; bien que les rendements des obligations en Italie soient passés de 15,2 à 14 % en octobre, il convient de considérer ce fait par rapport à l'augmentation de 12 à 15 % constatée en septembre.

Les rendements réels des obligations d'Etat (corrigés de l'inflation) sont indiqués dans le tableau suivant:

Taux d'intérêt longs réels (moyennes mensuelles)	3/92	6/92	9/92
Belgique	6,1	6,3	6,5
Danemark	6,1	6,7	7,5
Allemagne	3,3	4,0	4,4
Espagne	4,5	5,5	7,3
France	5,9	6,2	6,4
Italie	6,2	6,6	10,5
Luxembourg	4,7	4,3	5,0
Pays-Bas	4,1	4,4	4,7

(1) Au 1<sup>er</sup> janvier 1992, le panier auquel est liée la couronne islandaise est composé de l'écu (76 %), du dollar US (18 %) et du yen japonais (6 %).

	3/92	6/92	9/92
Portugal	4,0	1,9	1,8
Royaume-Uni	5,5	5,1	5,6
Etats-Unis	4,7	4,6	4,1
Japon	3,5	3,2	2,9

En septembre, l'Italie a accusé une nette hausse des rendements réels des obligations d'Etat, les rendements nominaux des obligations ayant augmenté pendant la période d'incertitude des cours. A 10,5 %, les rendements réels des obligations d'Etat étaient, en septembre, de quelque trois points de pourcentage supérieurs à ceux du Danemark, pays membre arrivant en deuxième position en matière de rendement.

Dans la Communauté, les rendements réels sont actuellement les plus bas au Portugal où les rendements nominaux sont relativement faibles alors que le taux d'inflation est élevé. A l'autre bout de l'échelle, le Danemark continue à avoir des niveaux de rendements réels d'obligation d'Etat à long terme extrêmement élevés qui résultent de la combinaison de rendements nominaux relativement élevés et d'une inflation qui, à 2 % en septembre, est actuellement la plus faible de tous les pays membres.

**MASSE MONETAIRE: La croissance monétaire reste faible dans de nombreux pays**

La croissance monétaire est restée faible dans de nombreux pays au cours des tous derniers mois. En France, le taux de croissance annualisé de M2 a été négatif pour 11 des 12 derniers mois tandis que M3 augmente à un taux annualisé de 5,2 % environ, qui se situe dans la fourchette de 4-6 % visée pour 1992. Le taux de croissance d'ALP («Actifs liquides détenus par les particuliers») s'est ralenti progressivement en Espagne au cours des 8 derniers mois: entre août 1991 et août 1992, il s'établissait à 4,9 %, c'est-à-dire bien en dessous de la fourchette de 8-11 %. La croissance monétaire reste également faible en Irlande, au Royaume-Uni et aux USA où la croissance de M2 entre juin 1991 et juin 1992 était égale à 1,8 % seulement.

Toutefois, on note plusieurs exceptions dans ce contexte de faible croissance, la plus frappante étant l'Allemagne où M3 a atteint 9,3 % entre août 1991 et août 1992 bien que ce chiffre ne soit que légèrement supérieur à celui du mois d'août. En Grèce et au Portugal, la croissance monétaire varie entre 15 et 18 %, bien qu'au Portugal, l'objectif de croissance annualisée de L – de l'ordre de 12-16 % pour la fin de 1992 puisse tout juste être atteint étant donné qu'entre août 1991 et août 1992, la croissance a été de 17,5 %.

**RESERVES DE CHANGE: Forte augmentation des réserves allemandes**

Les réserves de l'Allemagne ont augmenté de plus de 86 % en septembre, passant de 46,6 à 86 milliards d'écu. Cela est le résultat d'une intervention massive entreprise au cours de la période de turbulence monétaire à la mi-septembre lorsque la Bundesbank a vendu des Deutschemarks en échange des monnaies du MTC qui étaient attaquées sur les marchés des changes. Les achats les plus importants ont porté sur le sterling et la lire mais également sur le franc français.

Les banques centrales des monnaies concernées ont été obligées de rembourser la Bundesbank au taux de change en vigueur avant l'intervention, ce qui signifie, dans le cas de la lire et du sterling, que ces deux banques centrales assumeront des pertes importantes étant donné que ces deux monnaies se sont dépréciées de façon substantielle depuis la mi-septembre.

Les réserves des pays très touchés par la crise monétaire ont naturellement diminué bien que les chiffres actuels ne montrent pas l'importance réelle de la baisse. En septembre, la diminution la plus importante a été observée en Irlande (-29 %) et en Espagne (-18 %). Les réserves du Royaume-Uni n'ont diminué que de 5 % en septembre par rapport à août et les réserves de l'Italie ont augmenté mais les chiffres indiqués ici ne concernent pas les engagements de ces pays vis-à-vis du Fonds européen de coopération monétaire européen. De plus, les achats de monnaies effectués sur le «marché à terme», qui seront réglés dans plusieurs mois, ne figurent pas encore dans les données sur les réserves officielles.

**COMPTE TRIMESTRIELS: Au cours du deuxième trimestre 1992: léger fléchissement de l'économie communautaire (PIB -0,2 %) accompagnée par une inflation inchangée (+0,9 %).**

Le deuxième trimestre 1992 a été caractérisé, pour l'économie communautaire dans son ensemble, par un léger fléchissement de la production (PIB -0,2 %). Ce fléchissement, qui est le premier depuis le deuxième trimestre 1984, confirme le moment difficile de l'économie communautaire. Selon les économistes du MIT, à l'état actuel des choses, on ne peut pas identifier des signaux de reprise à court terme pour l'économie mondiale. Sur les raisons de cette phase d'incertitude, on a déjà discuté dans le numéro précédent de cette publication. Ici, il nous semble utile de mettre en évidence comment, pour des raisons différentes, tant les Etats-Unis, que le Japon ou l'Allemagne, ne peuvent se proposer comme locomotive de la reprise économique. Les différentes priorités des politiques économiques parmi les grands pays rendent difficile une politique économique coordonnée qui pourrait sans doute favoriser la reprise. En plus, les tensions spéculatives sur les marchés financiers, favorisées aussi par une utilisation en propre du taux d'intérêt comme instrument de contrôle du taux de change, ont contribué à faire augmenter le pessimisme parmi les investisseurs.

En ce qui concerne l'évolution des prix, mesurée par le déflateur implicite du PIB, on constate une inflation inchangée à un rythme trimestriel (+0,9 %) tandis qu'à un rythme annuel on observe un sensible ralentissement (+4,0 %). Ce résultat confirme la validité des politiques monétaires restrictives adoptées dans la plupart des Etats membres, même si dans le dernier mois on observe une légère tendance à la réduction des taux d'intérêt, tant pour favoriser la reprise économique que pour réduire les tensions spéculatives sur les marchés des devises.

En ce qui concerne les composantes du PIB, le fait marquant de ce trimestre est représenté par le nouveau fléchissement des investissements (-1,8 %) qui est le troisième en six trimestres. D'autre part, les premiers résultats concernant le deuxième trimestre indiquent un sensible fléchissement des investissements (-0,1 %), ce qui confirme les difficultés actuelles de l'économie communautaire. Ce fléchissement trouve ses raisons surtout dans les taux d'intérêt élevés et dans le moment difficile vécu par certaines branches de l'industrie comme, par exemple, l'informatique et les moyens de transport.

FR

En ce qui concerne la situation dans les Etats membres on constate un fléchissement de la croissance économique en Allemagne, au Royaume-Uni, au Danemark et aux Pays-Bas (PIB -0,7 %, -0,1 %, -1,0 % et -0,4 % respectivement). Tandis qu'en Italie et en France, on constate une évolution positive mais assez faible (PIB +0,2 %). En ce qui concerne l'inflation, les chiffres nous montrent une hausse sensible au Royaume-Uni et au Danemark (+1,8 % et +1,7 % respectivement). En France, par contre, on observe une réduction (+0,7 %) tandis qu'aux Pays-Bas on remarque une légère déflation (-0,1 %). Du côté de la demande, le fait marquant de ce trimestre est représenté par la baisse sensible des investissements dans tous les Etats membres. Cette baisse a été plus prononcée au Danemark et aux Pays-Bas (-6,9 % et -3,9 % respectivement) et plus contenue en France (-0,6 %).

Aux Etats-Unis on observe un ralentissement de la croissance économique (+0,3 %) ainsi que de l'inflation tant trimestrielle qu'annuelle (+0,6 % et +2,6 % respectivement). Parmi les composantes de la demande interne, le deuxième trimestre montre une sensible croissance des investissements (+2,9 %), tandis que la consommation, tant privée que publique, est caractérisée par un temps d'arrêt (-0,1 % et +0,1 % respectivement). Pour le Japon, dont on dispose des données pour le deuxième trimestre 1992, on constate un sensible ralentissement de la croissance économique (+0,3 %) accompagné par une reprise de l'inflation, tant trimestrielle qu'annuelle (+0,7 % et +1,9 % respectivement). Du côté de la demande, le fait marquant de ce trimestre a été représenté par le temps d'arrêt qui a caractérisé la consommation, tant privée que publique (+0,0 % et +0,1 % respectivement).

#### PRIX: Le taux d'inflation annuelle de la CE se maintient: 4,0 % en octobre.

Le taux d'inflation annuelle pour la CE est resté inchangé entre septembre et octobre au niveau de 4,0 %, confirmant ainsi la presque stabilité de l'inflation pour la Communauté pendant quatre mois consécutifs: juillet 4,1 %, août 4,1 %, septembre 4,0 %, octobre 4,0 %.

L'indice mensuel pour EUR-12 a augmenté de 0,4 % entre septembre et octobre, la même hausse que celle du mois dernier.

Les taux d'accroissement mensuels pour les Etats membres ont été les suivants: Espagne 0,1 %, Belgique, Danemark (\*) et Pays Bas 0,2 %, Allemagne et France 0,3 %, Royaume-Uni et Portugal 0,4 %, Luxembourg 0,5 % et Italie 0,6 %.

La Grèce a de nouveau enregistré une très forte hausse: 2,4 % en octobre après 4,1 % en septembre. L'indice trimestriel de l'Irlande pour mi-novembre ne sera disponible que le mois prochain.

Actuellement 10 sur 12 Etats membres affichent des taux d'inflation annuelle compris dans une fourchette de 2 points d'écart par rapport à la moyenne de la CE (4,0 %).

Les taux pour les différents Etats Membres sont les suivants:

	Oct. '92	Oct. '91		Oct. '92	Oct. '91
	Oct. '91	Oct. '90		Oct. '91	Oct. '90
Danemark*	2,0 %	1,8 %	Royaume-Uni	3,6 %	3,7 %
Belgique	2,2 %	2,2 %	R.F.d'Allemagne***	3,7 %	3,5 %
France	2,4 %	2,5 %	Italie	4,7 %	6,0 %
Irlande**	2,8 %	3,5 %	Espagne	5,2 %	5,5 %
Luxembourg	3,2 %	2,4 %	Portugal	9,0 %	9,2 %
Pays Bas	3,3 %	4,5 %	Grèce	15,9 %	17,7 %

Les taux correspondants pour les Etats-Unis et le Japon sont respectivement: 3,2 % (2,9 %) et 1,0 % (2,7 %).

\* Estimation Eurostat pour le Danemark.

\*\* Août '92/Août '91 pour l'Irlande.

\*\*\* L'IPC pour la R.F. d'Allemagne continue à se rapporter à la situation territoriale avant le 3 octobre 1990.

#### PRODUCTION INDUSTRIELLE: Aggravation de la récession

A la lecture des chiffres les plus récents (août 1992) de la production industrielle de la Communauté européenne (EUR12), il apparaît que la récession s'aggrave. Dans toutes les branches de l'industrie, on assiste à une baisse de la production. En août, l'indice de la production industrielle corrigé du nombre de jours ouvrables était de 83,7 (1985=100) pour la Communauté européenne, ce qui correspond à un taux de variation de -1,8 % par rapport à sa valeur du mois d'août de l'année dernière. L'indice corrigé des variations saisonnières s'est élevé à 112,3 en août, alors qu'il était de 114,0 en juillet. Par rapport à la valeur cumulée des mois de mars, avril et mai, la production industrielle corrigée des variations saisonnières de la CE a diminué de 1,2 % au cours des trois derniers mois disponibles (juin, juillet, août). Les nouvelles commandes de la CE, qui montrent l'évolution future de la production, confirment elles aussi une aggravation de la récession: le taux de variation des nouvelles commandes par rapport à l'année dernière (estimations), qui était de -1,3 % en mai/juin, s'est élevé à -3,8 % en juillet/août.

Dans les différents Etats membres de la CE, la production industrielle corrigée des variations saisonnières a évolué comme suit (taux de variation des trois derniers mois par rapport aux mois précédents): Danemark +2,5 %, Royaume-Uni +0,1 %, Belgique -0,2 % (estimation), France -0,9 %, Espagne -1,3 %, Irlande -1,4 % (estimation), Allemagne (Ouest) -1,5 %, Grèce -1,9 % (estimation), Italie -2,3 %, Pays-Bas -2,4 %. La production baisse donc dans un très grand nombre d'Etats membres.

Aux Etats-Unis, la production industrielle est en hausse de 0,5 % (taux de variation des trois derniers mois par rapport aux mois précédents); au Japon, la baisse de la production industrielle se poursuit, le taux de variation étant de -1,1 % (estimation).

On observe donc une légère reprise aux Etats-Unis, alors que dans la CE et au Japon, la production de l'industrie est en net recul.

Pour EUR12, la ventilation par grands groupes de biens fait apparaître l'évolution suivante:

Biens intermédiaires: -1,4 % Biens d'investissement: -2,1 % Biens de consommation: -0,4 %

Dans certaines branches, la production au niveau européen subit un recul supérieur à la moyenne: dans la construction électrique et électronique (y compris l'informatique) et dans la construction de matériel de transport.

#### BALANCE DES PAIEMENTS - Tendances mondiales - chiffres préliminaires pour le second trimestre de 1992 :

Détérioration de 3,8 milliards d'écus de la balance courante communautaire par rapport au second trimestre de 1991; la balance s'inscrit déficit de 16,7 Mrds. La balance courante américaine enregistre un déficit de 12,5 Mrds d'écus, une détérioration de 16 Mrds d'écus. La balance courante japonaise, en excédent de 22,6 Mrds d'écus, s'améliore de 7,1 Mrds.

Au second trimestre de 1992, selon des chiffres préliminaires, la balance courante communautaire atteindrait un déficit de 16,7 Mrds d'écus soit une détérioration de 3,8 Mrds par rapport au second trimestre de 1991. Cette détérioration provient d'une aggravation de 7 Mrds d'écus du déficit des invisibles qui est contrebalancée en partie par une amélioration de 4,2 Mrds de la balance commerciale. Ces variations sont dues en grande partie à la balance allemande qui a enregistré, sur la période considérée, une amélioration de 3,5 Mrds d'écus de l'excédent commercial et une aggravation de 3,4 Mrds du solde des services. La moitié de cette aggravation provient du poste voyages. On note par ailleurs une amélioration de la balance commerciale française de 2,8 Mrds et une dégradation des balances commerciales et des invisibles britanniques de 1,6 et 2 Mrds respectivement (au second trimestre de 1991, le Royaume Uni avait reçu des transferts importants liés à la guerre du Golfe).

Aux Etats Unis, le solde courant atteint un déficit de 12,5 Mrds d'écus au second trimestre de 1992 après un excédent de 3,5 Mrds sur le même trimestre de 1991. Le déficit commercial atteint 16,3 Mrds d'écus après 11 Mrds et l'excédent des invisibles 3,8 Mrds après 14,6 Mrds. La détérioration des invisibles est essentiellement imputable aux transferts qui étaient particulièrement bénéficiaires en 1991 en raison de paiements liés à la guerre du Golfe. Si on se réfère aux niveaux de 1990, le solde des invisibles américain connaît plutôt une amélioration en 1992.

Au second trimestre de 1992, l'excédent courant japonais atteint 22,6 Mrds d'écus à comparer à 15,7 Mrds en 1991. L'excédent commercial s'est amélioré de 5,2 Mrds d'écus et le déficit des invisibles s'est réduit de 3,1 Mrds.

#### COMMERCE EXTERIEUR

En juillet 1992, le solde des échanges extra-communautaires est de -2 Mrds d'écus, contre -5,3 Mrds pour le même mois de 1991. Mais le solde de juillet 1991 est fortement dégradé par le rebond des importations après la Guerre du Golfe, non compensé par la croissance des exportations. Le bilan extra-communautaire de la France participe à l'amélioration du solde communautaire comparé à juillet 1991, à concurrence de 1,4 Mrd d'écus. Les soldes extra de l'Allemagne, de l'Italie et des Pays-Bas sont aussi en progrès: respectivement de 0,6 Mrd, 0,5 Mrd et 0,3 Mrd d'écus. Les importations extra-communautaires observent une baisse de 5,7 % comparées au niveau élevé de juillet 1991. Les exportations, dont la poussée est moins nette que celle des importations après la Guerre du Golfe, croissent en juillet 1992 de 2 %.

Le coût d'approvisionnement de la Communauté en pétrole brut est supérieur de 9 % en dollars par baril à celui de juillet 1991. En termes d'écus ce coût baisse de 7 %, suite à la dépréciation du dollar par rapport à l'écu.

Le déficit commercial des Etats-Unis est de -8,7 Mrds d'écus en juillet 1992, en détérioration d'un demi milliard par rapport au même mois de 1991. Les importations des Etats-Unis sont en retrait de 7,3 % en écus, ce qui correspond à un progrès de 9 % en dollars. Les exportations observent une baisse de 11,2 % en écus, mais sont supérieures de 5 % en dollars à leur niveau de juillet 1991.

Le Japon dégage un excédent de 6,2 Mrd d'écus en juillet 1992, soit un demi milliard de plus qu'en juillet 1991. Les importations japonaises baissent de 12,1 % en écus, de 3 % en yens, mais progressent de 4 % en dollars. Les exportations sont en retrait de 6,8 % en écus, ce qui correspond à une progression de 1 % en yens, et de 10 % en dollars.

Le solde du commerce total de l'Italie est le plus élevé en juillet 1992: 0,8 Mrd d'écus, alors qu'il était proche de l'équilibre en juillet 1991. L'Allemagne et l'Irlande sont excédentaires d'un demi milliard d'écus chacun, en amélioration respectivement de 0,5 et 0,3 Mrd d'écus. Le Danemark est aussi excédentaire en juillet 1992 (0,2 Mrd d'écus). La France et l'UEBL enregistrent des soldes faiblement négatifs en juillet 1992, malgré des progressions de 1,3 Mrd et 0,3 Mrd par rapport à juillet 1991. Les Pays-Bas réduisent leur déficit total de moitié pour atteindre -0,4 Mrd en juillet 1991. Le Portugal et la Grèce ont des bilans négatifs plus légers qu'un milliard d'écus; le solde des échanges de la Grèce se dégrade de 0,4 Mrd d'écus comparé à juillet 1991. L'Espagne et le Royaume-Uni ont des échanges commerciaux totaux déficitaires respectivement de 2,3 Mrds d'écus et de 2,7 Mrds. Si le déficit espagnol est semblable à celui de juillet 1991, celui du Royaume-Uni est plus lourd de 0,7 Mrd d'écus.
