TOTAL: 440.3 MIO T

The first estimates for 1987 suggest that Community deliveries of all petroleum products have remained steady at 440 million tonnes (0.2% down on 1986). Despite this overall stability, national trends range from falls of 14% in Ireland and 5.7% in Denmark to increases of 8.3% in Portugal and 12% in Luxembourg. Deliveries in Italy went up by the relatively large amount of 5.24 million tonnes (up 6.8% on 1986).

This overall stability also hides differences between the main products :

- An increase in deliveries of motor fuels (+2%) and kerosene/jet fuels (+4.6%), continuing the trend of the previous years.
- A slight fall in deliveries of gas/diesel oil (-1.5%), in contrast to the increases recorded since 1984, with a peak of +4.9% in 1986.
- Finally, a drop in heavy fuel oil deliveries (-4.5%), with particularly significant falls in the United Kingdom (-19.7%), the Netherlands (-18.5%), the Federal Republic of Germany (-20.3%), Belgium and Denmark (between -22% and -23%). In contrast, deliveries in Italy rose sharply (+3 million tonnes or +12.7% in one year), owing to an increase in electricity production by conventional power stations to offset the almost complete shutdown of nuclear plants.
