STOCKS OF BOVINE ANIMALS, PIGS, SHEEP AND GOATS IN DECEMBER 1993

together with production forecasts

The following pages show the results of the surveys carried out in the Member States in December last year on stocks of bovine animals, pigs, sheep and goats, together with forecasts of gross indigenous production. Some of the population figures are still provisional. The gross indigenous production forecasts are also less reliable than previously because the necessary external trade figures for 1993 were not available in full owing to the changes in the collection system for intra-Community trade.

In addition we would like to draw your attention to the fact that new Directives on statistical surveys on pig and bovine animal production and sheep and goat stocks came into force on 1 January 1994. The texts of the new Directives, which were adopted by the Council in 1 June last year, are published in the Official Journal No L 149, 21 June 1993. The decisions to accompany these Directives will be adopted in the near future.

The new provisions are noticeably more flexible than the old ones and greater account is taken of the individual possibilities and circumstances of the Member States. The most important changes relate to survey arrangements, regional breakdowns, herd/flock size classes, external trade and production forecasts. Thus, for example, Member States whose national populations represent only a small percentage of the total population of the European Community are promised the option of reducing the number of surveys to be carried out every year. Greater account will also be taken of national circumstances for the regional breakdown of the survey results and their processing by herd/flock size class. With the internal market in mind, provisions relating to the transmission of external trade data have been deleted and those dealing with production forecasts adapted.

Although the surveys conducted in December last year were still based on the old Directives, the gross indigenous pig production forecasts already complied with the new Directive, i.e. they were for calendar quarter-years rather than for two-month periods.

Manuscript completed on = 14.03.1994

The market situation for sheep and goat meat

In 1993, three fundamental changes were made in the organisation of the sheepmeat and goatmeat market, viz: the institution of the single ewe premium, the introduction of individual producer limits and a new definition of eligible ewes and goats. The latter two measures doubtless encouraged producers to change their flock management.

In the past year, the average Community market price fell by 6.7% to ECU 259/100kg. This considerable fall was mitigated by the devaluation of the currencies of most of the large producer Member States against the green rates.

While prices in the United Kingdom and Ireland rose by only 2% in ecus, the increase in national currencies was 20% and 10% respectively. In the southern Member States, prices rose by 2 to 5% in national currencies but fell by around 15% in ecus, except in Portugal (-7%). In the Member States where no significant devaluation was recorded, and particularly on the major markets of France, the Netherlands and Germany, prices fell by 3 to 5% in both national currencies and ecus.

Two factors accentuated seasonal movements in market prices. In spring, the halting of imports from Eastern Europe following veterinary problems contributed to the recovery of prices in Italy and, consequently, in the other Member States. In autumn, on the other hand, and especially in the United Kingdom, sales of ewe lambs for slaughter increased, preventing the usual recovery of prices after the summer.

In 1994, market prices held relatively firm at the beginning of the year, at some 10% higher than for the same period in 1993. There was a noteworthy change in the Member States where prices traditionally fall in the first quarter, in that this year they remained relatively stable. This might be attributed to the introduction of individual producer limits contributing to the stabilisation of Community output.
