### THE PIG POPULATION IN APRIL 1993 and forecast of gross indigenous production

#### Slight fall in EC pig population

A comparison of the survey results from April 1993 with those from December 1992 shows a slight fall in the pig population in the European Community, with the total number of head for the 12 Member States standing at 108.549 million, though the figures for Spain are a preliminary estimate and were incomplete for certain categories at the time of going to press. This represents a fall of 0.9% or 937 000 head compared with the survey of four months previously. Pigs for fattening were particularly badly hit, but piglets recovered from the slight fall in December 1992 to reach an all-time high of 31.101 million head. The number of mated sows, which is of importance for future population trends, has remained more or less unchanged compared with December 1992.

#### Population level still greater than the previous year

Although the pig populations fell slightly compared with December 1992, they are still around +2% higher than one year ago. At the level of individual Member State, trends varied sharply: Greece recorded the highest growth rate, +11.1%, followed by Ireland with +9.1%, Luxembourg and France with +7.5% and +7.1% respectively and Portugal with +5.3%. In Denmark the increase was +2.9%, in Spain +2.8% and

in the United Kingdom +2.3%. The +0.7% increase in Germany left the population level only slightly above the previous year's. The only falls in population levels were recorded in Belgium and Italy, with -0.7% and -4.9% respectively.

### Continued reduction in numbers in the new Länder?

The slight increase in the pig populations in Germany goes back to the difference in trends between the old and new

Länder. Whereas the number of pigs in the old Länder increased by +1.4% or 313 000 head, a fall of -3.2% or 138 000 head was recorded in the new Länder. Although the number of pigs in the new Länder increased slightly in December 1992, all the figures seemed to suggest that the fall in population is continuing. The number of pigs in the new Länder currently stands at 4 129 million herd, representing a population reduction of over 66%.

### No change in high level of gross indigenous production

Gross indigenous production for the period April 1993-March 1994 is expected to be 175.405 million head, according to the forecasts from the individual Member States. Production will therefore once again be very high, with everything pointing to a new record level. The year-on-year increase is +2% or 3.362 million head. Gross indigenous production for the period April/May

1993 is expected to increase by +4% compared with the same period in 1992. The highest growth rate, +4.8%, is expected in the June/July period.

Given the high production level in 1992, growth rates are markedly lower for the period August/September, +2.3%, October/November, +0.2% and December/January, +1.0%. However, gross indigenous production will remain at a very high level. For the October/November period alone, production is expected to be 30.673

million and in December/January total production will increase by 814 000 head to reach 31.487 million. The market for pig meat is not expected to ease until February/March 1994. Gross indigenous production is expected to record a year-on-year fall of -1.3%, -1.5% and -0.3% in Denmark, Greece and the United Kingdom respectively. Production will increase in almost all other Member States, sharply in some. Ireland will top the table with +7.7%, followed by France with +5.9% and the Netherlands with +4.5%. In Portugal and Belgium the increases will be +3%, and in Germany, Spain and Italy, +1%. In Luxembourg, however, production is expected to remain unchanged at the 1992 level.

#### **Pigmeat market still depressed**

During the first six months of 1993, the market prices for pigmeat were at the lowest levels since 1987. From January to April 1993, they fell from ECU 109.5 per 100 kg to ECU 102.7 per 100 kg, whereas the second quarter was characterized by very slight increases; the figure at the end of June was ECU 111.1 per 100 kg, this corresponding to 58.6% of the base price. In June of the previous year, prices had stood at 82.4% of the base price.

The Community index for pigmeat/feed prices has been well below 100 since September 1992, reaching a low of 84 during May 1993. Although the profitability of the sector may not be positive, a decline in gross indigenous production of pigs is not yet envisaged for the whole of 1993. It follows that breeders could still profit from the very high margins of the previous years.

The first six months of the year were marked in particular by veterinary problems (in chronological order, vesicular disease in the Netherlands and Italy, foot-and-mouth disease in Italy and certain countries of eastern Europe, and swine fever in Lower Saxony) and by a strike of slaughterhouses in Denmark between April and May which delayed the slaughtering of around 1 million pigs.

To combat the fall in prices and relieve a depressed market, the Commission decided to open up private storage throughout the Community from 22 March 1993. This step allowed storage of around 81 000 tonnes of pigmeat up to mid-June, the date that private storage closed. In addition, a special refund was arranged on 16 June for exports of pigmeat to Russia, Ukraine and Belarus, designed to create an outlet for approximately 30 000 tonnes of meat.
