### The Pig Population in April 1992

#### and forecasts of gross indigenous production

The results of the pig survey carried out in the Member States in April of this year, as well as the forecasts of gross indigenous production, are shown on the following pages.

At Community level, the population rose by 0.7% or 741 000 animals over the previous year. There is no uniform trend at country level, however. High rates of increase were apparent in Denmark (+6.8%), Ireland (+6.7%) and Spain (+4.3%). The population rose by 2.3 and 2.7 % in the Netherlands and Portugal respectively; the increase in Belgium was 1.5% and in France 0.6%. The figures were virtually unchanged over the previous year in Italy (+0.1%), and populations fell in Germany (-3.6%), the United Kingdom (-1.6%) and Luxembourg (-1.1%).

The number of covered sows, important for future development, rose in almost all Member States, in some cases rapidly, there being a decline only in Belgium (-1.3%). The number of these animals was virtually constant in Germany compared with the previous year (for the first time after unification). The rapid run-down of stocks in the five new Länder, a result of unification, has thus probably come to an end.

Gross indigenous production at Community level is expected to rise by 1%. Approximately 171.69 million pigs will be slaughtered for the period April 1992 to March 1993 - an increase of 1.76 million animals over the previous year. The steepest rates of increase are expected for the months August to November 1992.

Forecasts of gross indigenous production are missing for Greece and Portugal for the period from December 1992 to March 1993.

Manuscript completed on = 30.07.1992
