### The cattle population in May/June 1991

On the following pages you will find the results of the cattle population surveys of May/June 1991 and the gross indigenous cattle production forecast.

The gross indigenous production forecast for Italy for the second half of 1992 is not available and therefore it was decided to use the figures for the previous year. This should be remembered when interpreting the results for the European Community as a whole.

At Community level, the survey results of May/June this year can be compared with those of May/June last year only if the five new Länder are left out because there are no directly comparable figures for May/June 1990 for the ex-GDR. The survey results for the old and new Länder of the Federal Republic of Germany are therefore compared with those of December 1990 in a special table on the last page. This table shows that most of the decline in cattle population in the Federal Republic of Germany took place in the area of the ex-GDR.

#### Cattle population slightly down

At EC level (not including the new Länder), the cattle population fell by 0.7 percentage points or 562 000 head compared with the previous year. A comparison of Member State figures does not reveal any uniform trend. There was an increase in population in Spain, Ireland, the Netherlands, Portugal and Luxembourg and a decline in the other countries. Spain and Italy had the most significant rates of change: +4.4 and -5.0 percentage points respectively.

#### Gross indigenous production slightly down as well

Gross indigenous production for 1992 is expected to total 29 710 million head. This represents a decline of 4.2 percentage points over 1991. In the first half of 1992 in particular the gross indigenous production will fall by as much as 7.2%. In the second half of 1992 the situation will become stabilized insofar as gross indigenous production will be only slightly below that of the second half of 1991 (-1.2%).
