Retail sales: Wide country-to-country variations in April 1988

The April 1988 figures for the volume of retail sales in the nine countries for which EUROSTAT receives data shows wide country-to-country variations over the corresponding figures for the previous year.

In four countries the index of retail sales volume declined: by 5,8% in Denmark, 3,5% in Germany, 3,1% in Ireland and 1,6% in France.

In Luxembourg the volume of sales in supermarkets and chain-stores (both of which deal mainly in food products) remained at the same level as in April 1987.

In the four remaining countries - Greece, the United Kingdom, the Netherlands and Belgium - the index rose, by 25,3%, 4,1%, 2,8% and 1,8% respectively.

The very substantial increase in the volume of retail sales in Greece is particularly noteworthy. Data available to EUROSTAT suggest that during the period July 1987 / April 1988 the volume of retail sales index was more than 13% higher than for the period July 1986 / April 1987.

En avril 1988: Fortes différences de pays à pays dans l'évolution du volume des ventes du commerce de détail

L'évolution du volume des ventes du commerce de détail dans les neuf pays pour lesquels EUROSTAT reçoit des données en la matière est au mois d'avril 1988 et comparée au même mois de l'année précédente très différent de pays à pays.

Dans quatre pays l'indice du volume des ventes est en régression: de 5,8% au Danemark, de 3,5% en République Fédérale d'Allemagne, de 3,1% en Irlande et de 1,6% en France.

Au Grand-Duché de Luxembourg le volume des ventes des grandes surfaces et des chaînes de magasins (toutes deux commercialisant principalement des produits alimentaires) se maintient au niveau atteint en avril 1987.

Dans quatre autres pays, la Grèce, le Royaume-Uni, les Pays-Bas et la Belgique, l'indice augmente respectivement de 25,3%, 4,1%, 2,8% et de 1,8%.

Il y a lieu de souligner tout particulièrement les augmentations très importantes du volume des ventes du commerce de détail en Grèce. Selon les informations dont dispose EUROSTAT, l'indice du chiffre d'affaires du volume des ventes y aurait augmenté durant la période de juillet 1987 à avril 1988, par rapport à juillet 1986 à avril 1987, de plus de 13%.

Explanatory notes

A. Turnover in the retail trade

1. Volume of sales: volume indices (quantity) are the ratio between the indices of sales at current prices and the corresponding price indices (prices of goods sold through retail outlets).
2. Data source: the indices are provided by the national statistical institutes. In cases where these calculate only indices of sales at current prices (in the Netherlands, Luxembourg, Greece, the United States and Japan), the SOEC calculates the volume indices from the current price indices and the corresponding consumer price indices. The same applies to seasonally adjusted indices: the national indices are given for France, the United Kingdom, Ireland and Denmark whereas for the other countries a seasonal adjustment is calculated by the SOEC.
For the United Kingdom and Ireland, the monthly indices correspond to the averages of weekly sales.
3. Base year for the indices: the year 1980 was chosen by the SOEC but is in some cases only an arithmetical base to which the national series are corrected. The real base, to which the structure of the universe refers, varies from country to country.
4. Field covered: in principle, the indices cover the whole of retail trade. In Luxembourg, however, they cover only sales from hypermarkets and chain stores selling mainly foodstuffs.
5. Turnover by group of activity: Once a quarter (months 1, 4, 7 and 10) this bulletin publishes volume indices (gross and seasonally adjusted) for sales by enterprises whose main activity is the retail sale of one of the following three groups of products:
 - food, drink, tobacco (NACE 641/2)
 - clothing, footwear, leather goods (NACE 645-646)
 - household equipment (NACE 647 and 648/9).These indices are not available, however, for all countries, and in some cases they do not exactly cover sales in the three groups of products as defined by the NACE. The available indices may, however, be considered to be representative of sales trends in each of the three groups of enterprises.
6. EUR index: the Community index is calculated on the basis of the available data and where necessary Eurostat estimates. It is obtained by weighting the national indices by the volume of goods (habitually sold by the retail trade) consumed by households in 1980. The Luxembourg indices are weighted by the volume of goods sold in 1980 by hypermarkets and chain stores.
7. The moving averages for three months correspond to the simple arithmetic mean of three consecutive monthly indices. For the United Kingdom and Ireland, the arithmetic means are weighted according to the number of weeks in each month. They are localized on the last month of the period concerned.

B. Registration of private and commercial vehicles

1. Private and commercial vehicles: Motorized road vehicle for the transport of passengers, with seats for a maximum of 9 persons including the driver. Also included are hire vehicles and vehicles for mixed use (for the transport of goods as well as or instead of passengers).
2. First registrations: are the number of road vehicles registered for the first time during the course of the reference year by the country making the declaration.
3. EUR 12 index: the weightings correspond to the number of vehicles registered during 1980 in each country.
4. Seasonal adjustment: the seasonal adjustments to the data are made by SOEC. In view of the highly irregular variations noted in the seasonally adjusted series, the seasonal component is currently being studied at the SOEC. The graphs have been drawn up from seasonally adjusted series, smoothed out using a simple arithmetic mean of three consecutive monthly averages localized, as for the retail trade, on the final month of the period concerned.

A. Chiffre d'affaires du commerce de détail

1. Volume des ventes: Les Indices de volume (quantité) des ventes correspondent au rapport entre les indices des ventes à prix courants et les indices des prix correspondants (prix des biens vendus par le commerce de détail).
2. Source des données: Les indices sont fournis par les instituts nationaux de statistique. Pour les pays ou les instituts calculent uniquement des indices de ventes à prix courants (Pays-Bas, Luxembourg, Grèce, États-Unis et Japon), c'est l'OSCE qui calcule les indices de volume à partir desdits indices à prix courants et des indices correspondants des prix à la consommation. Il en est de même pour les indices désaisonnalisés: pour la France, le Royaume-Uni, l'Irlande et le Danemark sont repris les indices nationaux tandis que pour les autres pays la désaisonnalisation est calculée par l'OSCE.
Pour le Royaume-Uni et l'Irlande, les indices mensuels correspondent aux moyennes des ventes hebdomadaires.
3. Année de base des indices: L'année 1980, choisie par l'OSCE, n'est dans certains cas qu'une base arithmétique à laquelle sont ramenées les séries nationales. La base réelle, à laquelle se réfère la structure de l'univers, varie, en effet, de pays à pays.
4. Champ couvert: Les indices couvrent en principe l'ensemble du commerce de détail. Pour le Luxembourg, toutefois, les indices ne recouvrent que les ventes des grandes surfaces et les chaînes de magasins à prédominance alimentaire.
5. Chiffre d'affaires par groupe d'activité: Le présent bulletin publie une fois tous les trois mois (no. 1, 4, 7 et 10) des indices du volume (bruts et désaisonnalisés) des ventes des entreprises ayant comme activité principale la vente au détail d'un des trois groupes de produits suivants:

- alimentation, boissons, tabac (NACE 641/2)
- habillement, chaussures, maroquinerie (NACE 645-646)
- articles d'équipement du foyer (NACE 647 et 648/9)

Ces indices ne sont toutefois pas disponibles pour tous les pays. D'autre part, les indices ne couvrent parfois pas rigoureusement les ventes des trois groupes de produits tels qu'ils sont définis par la NACE. Les indices disponibles peuvent toutefois être considérés comme représentatifs de la tendance des ventes de chacun des trois groupes d'entreprises.

6. Indice-EUR: L'indice communautaire est calculé sur base des données disponibles et, le cas échéant des estimations d'Eurostat. Il est obtenu en pondérant les indices nationaux par le volume des biens (habituellement vendus par le commerce de détail) consommés par les ménages en 1980. Les indices du Luxembourg sont pondérés par le volume des biens vendus en 1980 par les grandes surfaces et chaînes de magasins.
7. Les moyennes mobiles sur trois mois correspondent à la moyenne arithmétique simple de trois indices mensuels consécutifs. Pour le Royaume-Uni et l'Irlande, il s'agit de moyennes arithmétiques pondérées en fonction du nombre de semaines que compte chaque mois. Elles sont localisées sur le dernier mois de la période concernée.

B. Immatriculation de voitures particulières et commerciales

1. Voitures particulières et commerciales: Véhicule routier à moteur pour le transport de voyageurs pourvu de sièges pour 9 personnes au maximum, y compris le chauffeur. Sont également compris les voitures de louage et véhicules à usage mixte (destiné à transporter des marchandises en plus ou à la place de voyageurs).
2. Premières immatriculations: Correspondent au nombre de véhicules routiers immatriculés pour la première fois par le pays déclarant dans le courant de l'année de référence.
3. Indice EUR12: Les pondérations correspondent au nombre de voitures immatriculées durant l'année 1980 dans chacun des pays.
4. Désaisonnalisation: C'est l'OSCE qui procède à la désaisonnalisation des données. Compte tenu des variations très irrégulières que présentent les séries désaisonnalisées, des études sur leur composante saisonnière sont en cours à l'OSCE. Les graphiques ont été construits à partir des séries désaisonnalisées lissées par une moyenne arithmétique simple de trois indices mensuels consécutifs localisée, comme pour le commerce de détail, sur le dernier mois de la période concernée.
