# Farm Structure Survey in Ireland - 2007

## 93% of Irish farms are livestock specialists

This Statistics in Focus is part of a series of country-specific publications on the results of the Farm Structure Survey (FSS) 2007. It provides a brief but nevertheless comprehensive insight into the farm structure in Ireland.

128 200 agricultural holdings were recorded in Ireland in the 2007 Farm Structure Survey which represents a 3% decrease since 2005. The farms with at least 1 European Size Unit (ESU) have suffered a more significant reduction (6%). This drop affects all size classes, but with greater impact on the farms under 5 ha (-21%).

Due to the different coverage of the FSS across Member States, the total number of surveyed farms is not comparable between countries. This is why the present analysis focuses on holdings of at least one European Size Unit (ESU). See the methodological notes for more information on the concept of ESU.

In 2007, **117 900 agricultural holdings** had an economic size of at least 1 ESU, compared to 125 500 in 2005 (a 6% reduction). The increase in the number of farms with less than 1 ESU was 44% from 2005 to 2005.

They made use of **4.02 million ha of utilised agricultural area- UAA**, (3% less when compared with 4.16 million ha in 2005), which is on average about 34 ha per holding;

These holdings employed **141 000 AWUs** (annual work units), the equivalent of 141 000 people working full time, a decrease of 5 % since 2005;

They had **5.9 million livestock units** (LSU) in 2007, 5 % less than in 2005.

Amongst these 117 900 agricultural holdings:

33 % made use of less than one AWU, while another 15 % made use of 2 or more AWUs;

39% used less than 20 ha, while 4% used 100 ha or more;

93% of Irish farms specialize in livestock;

54% specialised in rearing and fattening cattle;

21% were engaged in breeding sheep, goats and other grazing livestock;

16% specialize in dairy farming.

Amongst the sole holders:

10% were women in 2007;

50% were aged 55 or more and 7% were younger than 35 years;

43% of sole holders had another gainful activity in 2007 (compared to 37% in 2005);

In Ireland in 2007, 81% of the agricultural area was farmed by its owners.

The family labour force regularly employed has decreased by 5% from 2005 to 2007. But it counts for 93% of the total agricultural labour force.

The number of holdings with dairy cows decreased by 11%. The number of farms specialised in dairy cows also registered a 9% reduction.

The 2007 FSS results show a general decrease in livestock units, this tendency is more evident in the number of sheep (-15%) and goats (-13%).

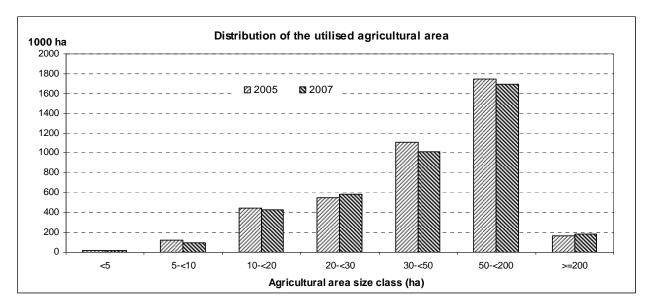

75% of the UAA in Ireland is permanent grassland and meadow.

The area of forage plants decreased by 14% since 2005, that corresponds to less than 2% of the UAA.

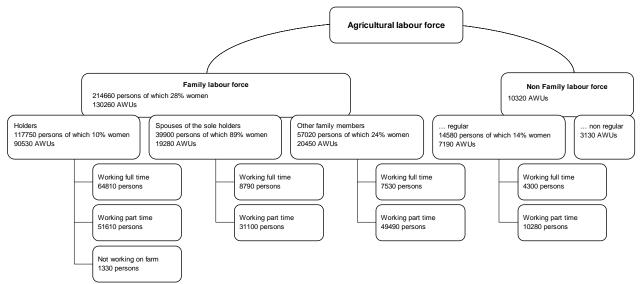

91% of the Irish farm animals are grazing livestock.

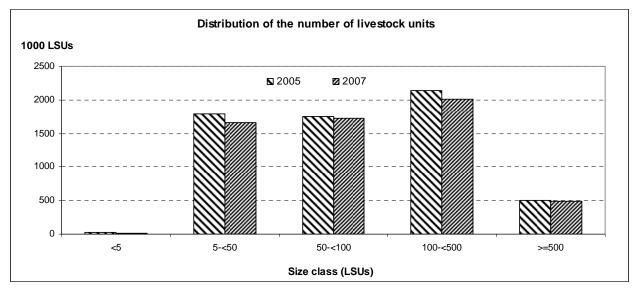

The area of organic farming showed a slight increase (15%), but its impact still remains small on the overall UAA (0.54%). The number of organic farms is stable since 2005.

## >METHODOLOGICAL NOTES

The 2007 survey on the structure of agricultural holdings in Ireland was carried out with the reference day on the 1<sup>st</sup> June 2007. The reference period for labour force was the preceding 12 months.

Prior to this survey a full-scale agriculture census was carried out in 2000 and it was the main source for the Farm register. The EU sample surveys in 2003, 2005 and 2007 were based on it. The farm register is regularly updated with administrative sources and other national farm surveys (with a much smaller scope and covering approximately 20% of the population frame) that are held every year.

The target population was the agricultural holdings recorded in the farm register. No threshold was applied in advance to define the holding (a single unit, both technically and economically, which has a single management and which produces agricultural products), but the surveyed farms with less than 1 ha, less than 1 livestock unit and not engaged in any specialist activity were excluded.

The sampling frame for the 2007 FSS was 132 284 holdings. 76 969 farms were sampled using a regional breakdown and 10 different strata regarding the typology and the size (economic and area). A specific stratum for the new farms was also included. Two thirds of the sampled units matched with the ones from the 2005 or 2006 surveys.

The questionnaires were printed and mailed. A preprinted barcode on the first page was used to identify each survey form, which was then scanned and electronically transferred to the farm register.

The check of the data was assisted by software which detects the missing values and unrecognisable digits.

The compiled dataset was checked by other built-in validations. The response rate for the surveys was 72%. Partial non-response was, in some cases, imputed using previous survey results.

Between FSS 2005 and 2007 "maintaining land in good agricultural and environmental conditions" (GAEC) became an agricultural activity and the involved land has been included in the agricultural area. In Ireland it covers 10 425 ha, 94% being in farms with at least 1 ESU.

For each activity (`enterprise`) on a farm (for instance wheat, dairy cow or vineyard), a SGM is estimated, based on the area (or the number of heads) and a regional coefficient. The sum of such margins in a farm is its economic size, expressed in European Size Units (ESU, 1 ESU is a 1200-euro standard gross margin).

An Annual work unit (AWU) is equivalent to a worker employed on a full time basis for one year. In Ireland it is 1800 hours (225 working days of 8 working hours per day).

A Livestock Unit (LSU) is equivalent to a dairy cow. The number of animals (number of heads) is converted into LSU using a set of coefficients reflecting the feed requirements of the different animal categories.

#### **European Statistical Data Support:**

Eurostat set up with the members of the 'European statistical system' a network of support centres, which will exist in nearly all Member States as well as in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site: <a href="http://ec.europa.eu/eurostat/">http://ec.europa.eu/eurostat/</a>
