

Farm Structure Survey in the United Kingdom - 2007

Permanent grassland and meadow accounts for 59% of the total UAA.

.....

This Statistics in Focus is part of a series of country-specific publications on the results of the Farm Structure Survey (FSS) 2007. It provides a brief but nevertheless comprehensive insight into the farm structure in the United Kingdom.

300 000 agricultural holdings were recorded in the United Kingdom in the 2007 Farm Structure Survey (5% more than in 2005¹). The utilized agricultural area was slightly over 16.5 million hectares.

* * *

Due to the different coverage of the FSS across Member States, the total number of farms is not comparable between countries. This is why the present analysis, including Tables 1-4 and the graphs focus on holdings of at least one European Size Unit (ESU). See the methodological notes for more information on the concept of ESU.

In 2007, 61% (183 000) of the **agricultural holdings** in the United Kingdom (UK) had an economic size of at least 1 ESU.

They used about **14.8 million ha of utilised agricultural area** (UAA), a decrease of 0.3% compared with 2005. This area represents 89% of the total UAA in the UK and an average of 81 ha per holding.

These holdings employed **286 000 AWUs** (annual work units), the equivalent of 286 000 people working full time; (2% less than 2005).

They had **13.7 million livestock units** (LSU) in 2007, a decrease of 3.5% from 2005.

Amongst these **183 000** agricultural holdings:
 40% made use of less than one AWU, while another 27% made use of 2 or more AWUs;
 7% used less than 2 ha, while 73% used 50 ha or more;

75% of farms in UK specialise in livestock;
 36% of the holdings specialised in sheep, goats and other grazing livestock;
 17% specialised in cattle – rearing and fattening;
 16% specialised in cereals, oil seed and protein crops.

The family labour force represents 27% (187 795 AWU) of the total labour force.

Amongst the sole holders:

14% were women;

58% were aged 55 or more and 3% were younger than 35 years;

34% of the sole holders had another gainful activity in 2007.

In the UK in 2007, 9.8 million hectares (66%) of the agricultural area was farmed by its owners, a 6% decrease compared with 2005.

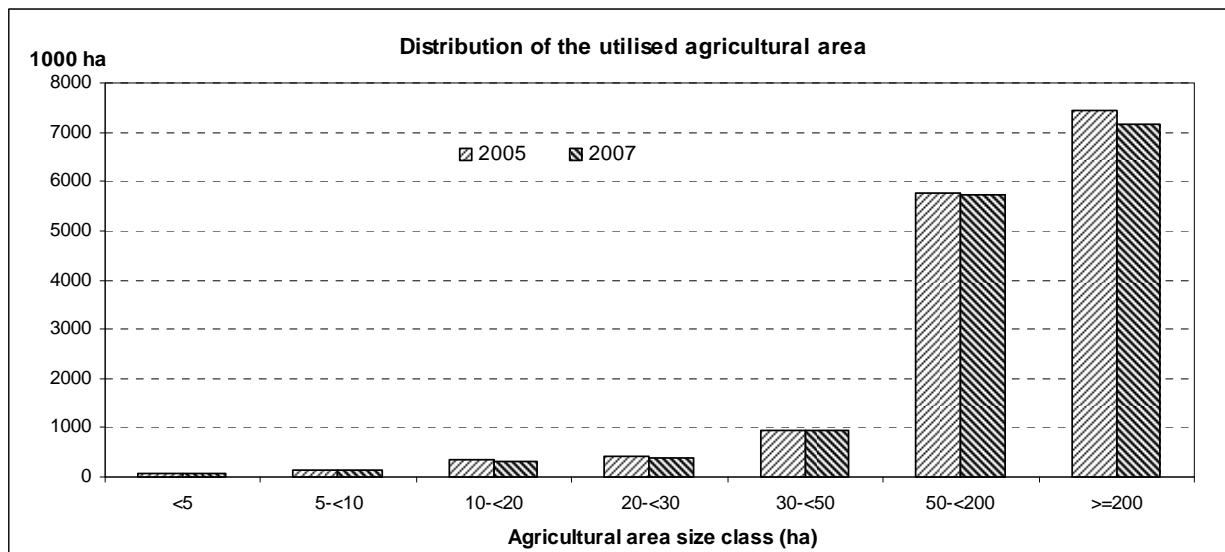

The area of permanent grassland and meadow was 9 million ha, 59% of the UAA in the UK, and it has suffered a 4% reduction since 2005. 41% of the UAA is arable land.

Industrial plants increased by 10% in terms of area compared with 2005, this rise resulted from the growth in the area of rape and turnip with nearly 100 000 ha more in 2007.

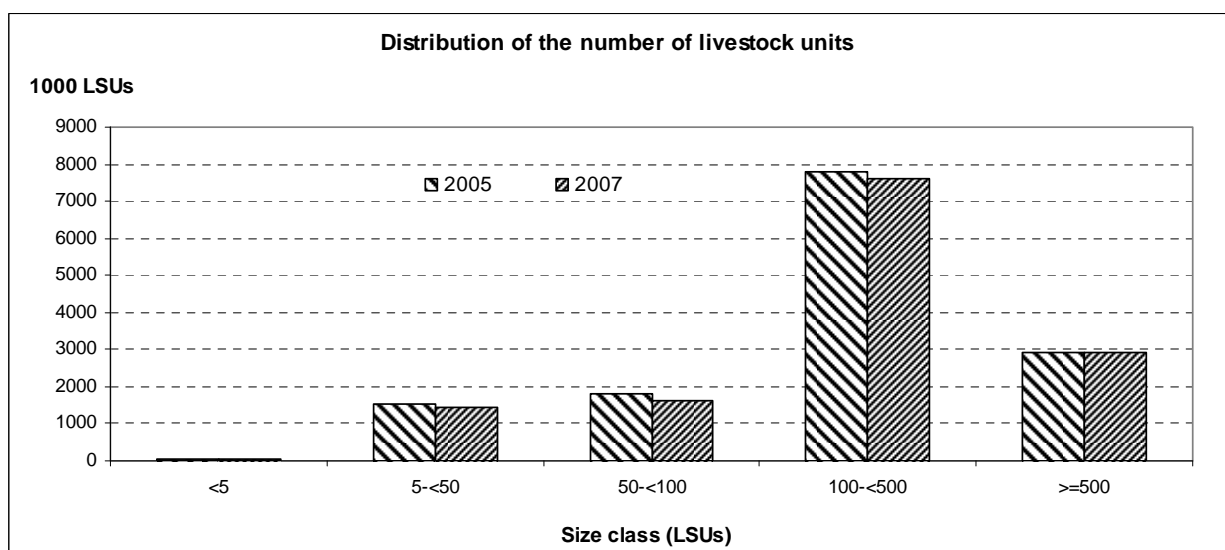

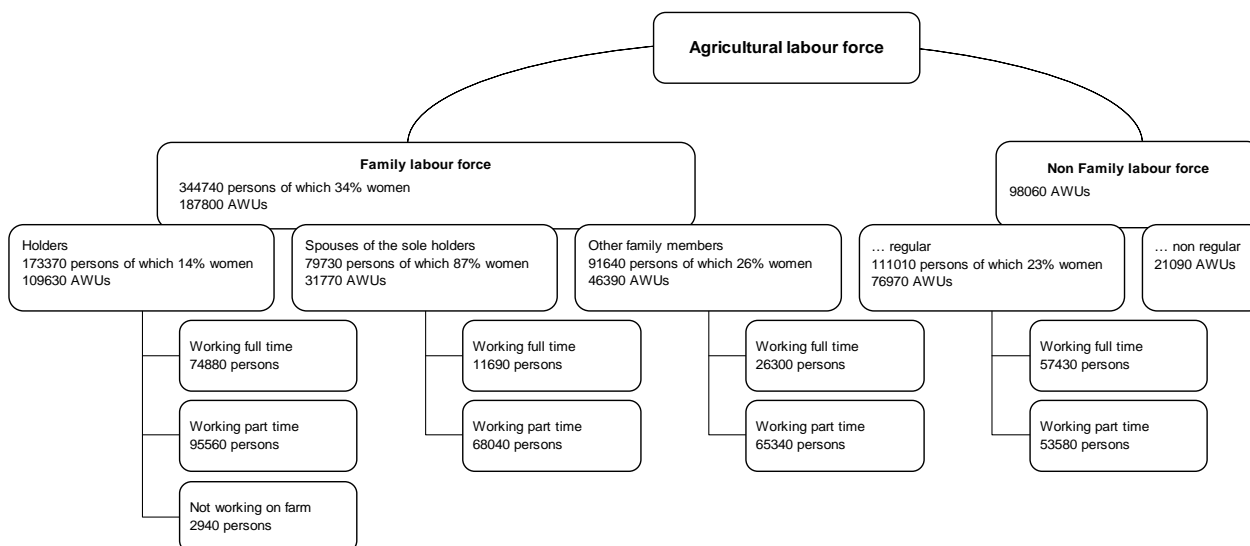

84% of the farms in the UK have livestock. The average LSU per holding was 88. Of all the farm animals 80% are grazing livestock. The number of farms with dairy cows rose by 12% from 2005 to 2007, in spite of the 6% reduction in the number of dairy cows during the same period.

27% of the British holdings are engaged in other gainful activities. When considering only tourism, accommodation and other leisure activities, the percentage of farms is 11%.

¹ This rise is due to greater numbers of registrations for animal tracing purposes and for subsidy scheme payments. The increase is mainly on the smallest holdings with <1 ESU.

Description of the labour force in the United Kingdom

*LSUs = Livestock Unit

➤ METHODOLOGICAL NOTES

The Farm Structure Survey 2007 was led by the Department for Environment, Food & Rural Affairs (Defra) which was responsible for collating the FSS data from the four constituent countries of the UK: Defra in England, the Department of Agriculture & Rural Development (DARD) in Northern Ireland (NI), the Scottish Government Rural and Environment Analytical Services (REAS) and the Welsh Assembly Government.

The FSS data were collected in each country in two separate surveys: the majority of data through the regular June survey of agriculture (with 1st June 2007 as its reference day) but the labour data was collected in a separate Labour survey.

	Northern			
Main Survey	England	Ireland	Scotland	Wales
Population				
Frame	208,166	26,146	51,365	37,000
Sample	58,986	21,911	31,558	13,500
Responses	40,248	15,686	24,478	7,300
Coverage Rate	19%	60%	48%	19%

	Northern			
Labour Force Survey	England	Ireland	Scotland	Wales
Reference period	10/2006-09/2007	03/2006-02/2007	03/2006-02/2007	03/2006-02/2007
Population				
Frame	208,166	26,146	27,300	37,000
Sample	60,000	13,387	14,500	14,500
Responses	35,542	8,545	10,676	9,300
Coverage Rate	17%	33%	39%	25%

The table above includes for each of the countries some indicators regarding the two surveys.

In England and Wales a holding is a unit comprising land on which agricultural activities are carried out. In these countries holdings are classified by their Standard Labour Requirement (SLR). In the SLR system, each livestock type and land-use has a theoretical amount of labour required each year. This

value is multiplied by the land area or livestock numbers and then summed to give the SLR for the holding. The SLR indicates the typical number of full time workers required on the holdings. Farms over 5 SLR are sampled 100%, and under 0.25 SLR have a sampling rate of 20%. The threshold for a holding in NI is at least 1 ha or under 1 ha and having livestock (except equidae) or significant horticultural activity. In Scotland the farms included in the survey must have at least 1 ha and 1.66 ESU or one full time farmer or significant poultry or horticultural activity.

Between FSS 2005 and 2007 "maintaining land in good agricultural and environmental conditions" (GAEC) became an agricultural activity and the concerned land has been included in the agricultural area. In England it covers close to 31 100 ha, 97% in holdings with at least 1 ESU.

For each activity ('enterprise') on a farm (for instance wheat, dairy cow or vineyard), a Standard Gross Margin (SGM) is estimated, based on the area (or the number of heads) and a regional coefficient. The sum of such margins in a farm is its economic size, expressed in European Size Units (ESU, 1 ESU is a 1200-euro SGM). The farm type of each holding is calculated into different categories using the SGM. A farm specialized in crops has two thirds or more of its SGM coming from the production of types 1 (field crops), 2 (horticulture) or 3 (permanent crops).

An Annual work unit (AWU) is equivalent to a worker employed on a full time basis for one year. In the United Kingdom it is 1800 hours (225 working days of 8 working hours per day).

A Livestock Unit (LSU) is equivalent to a dairy cow. The number of animals (number of heads) is converted into LSU using a set of coefficients reflecting the feed requirements of the different animal categories.

European Statistical Data Support:

Eurostat set up with the members of the 'European statistical system' a network of support centres, which will exist in nearly all Member States as well as in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site:
