### COAL

#### Statistical aspects of the coal economy in 1987 - Provisional results -

In 1987 the situation in the Community coal economy was again determined by a fall in sales of coal and coke. As a result coal production in the Community fell, the latest estimates indicating a drop of approximately 12 Mio t in 1987.

Although pit-head stocks in most coal-producing countries increased slightly a significant reduction in the United Kingdom left total Community stocks more than 1.8 Mio t down.

As official figures for coal imports from non-Community countries for the calendar year 1987 were not yet available when this report was finalized we were obliged to use estimates. On this basis imports from non-Community countries were slightly down, 94.2 Mio t, against 95.5 Mio t in 1986, a fall of approximately 1.3 Mio t (-1.4%).

Provisional calculations indicate total deliveries in the Community of Twelve amounting to 315.0 Mio t in 1987, against 332.0 Mio t in 1986. Supplies to power stations and coking plants account for approximately 190.0 Mio t and 71.4 Mio t respectively. Deliveries to industry are estimated at around 33 Mio t, domestic supplies and miners' allowances at around 16 Mio t, and other sales at approximately 5.5 Mio t.

Compared with 1986, total Community deliveries fell by 17 Mio t (-5.1%) with power stations accounting for 11 Mio and coking coal 6.1 Mio t (-7.9%).
