

### Inland deliveries of petroleum products in 1990

In 1990, deliveries of petroleum products within the Community amounted to approximately 456.8 million tonnes, 0.6% up on the previous year (454.0 million tonnes).

The situation regarding the main products is as follows :

- a decrease in deliveries of residual fuel oil (-4.3%), although given the downward trend since 1979, 89 was exceptional (increase of 5.1%). This drop is due to decrease in the use of those products in conventional power stations;
- an increase in deliveries of motor fuels (+2.2%) and aviation fuels (+5.3%);
- an increase in deliveries of gas oil and diesel oil (+2.5). The increase is the result of an increase in transport products (roughly +4.6%) and stagnation for all other uses and heating in particular.

The main trends in the various countries were as follows :

- there is no significant drop in total deliveries. However, for residual fuel-oil, sharp decreases in quantities are noted for France (-14.8%) and Portugal (-13.8%) due to an improvement in available hydroelectrical power.
- an important increase in total deliveries in Ireland, Luxemburg and less important in West Germany (+13%, +9.6%, and 4.3%). For West Germany, this trend may be explained by purchases of petroleum products by the ex-GDR having been considered as deliveries in the internal market.
