TRENDS IN THE EC AGRICULTURAL PRICE INDICES (OUTPUT AND INPUT) IN 1991

Producer prices of agricultural products (output):

- Increase in nominal terms: +2.6% (1990: +1.5%).
- Continuing decline in real terms (-3.8%), but less than in 1990 (-5.2%).
Real producer prices down in all Member States

Purchase prices of goods and services for current consumption in agriculture (input I):

- Increase of +3.1% in nominal terms (1990: +1.1%).
- Real price fall of -2.7% (1990: -4.8%).

Purchase prices of goods and services contributing to agricultural investment (input II):

- Up +5.6% in nominal terms, slight fall in real terms (-0.5%).

Comparison of trends in real output and input (I) prices:

- Net price effect of -2.6 points for Community (EUR 12).
- Negative net price effect for ten Member States, small positive effect in Italy and the Netherlands.

1. EC index of producer prices of agricultural products (output prices)

In 1991, the index of producer prices of agricultural products (including fruit and vegetables) for the Community (EUR 12) rose by +2.6% in *nominal* terms (cf. Table 1). In *real* terms, the output price index decreased by -3.8%, continuing the long-run decline which was interrupted only by a +2.9% increase in 1989. In 1991 the index of real producer prices for EUR 12 reached a new low of 85.2 (1985=100), this represents a cumulative fall of nearly -15%.

Catalogue number: CA-NN-92-007-EN-C

The *real* price index for crop products repeated last year's slight decline (-0.4%). Real prices of fruit rose strongly (+10.8%) following a large rise last year. Root crop and flower prices firmed slightly in real terms (+0.9% and +1.2% respectively). The product group showing the largest price rise was olives and olive oil (+13.3%). Prices for all other product groups went down, in real terms. For cereals this fall was only -1.3% (after strong price falls in previous years), and for fresh vegetables only -1.5%. The steepest decline among the product groups was observed in the wine must and wine index (-11.2%). Sizeable real price reductions were also observed for seeds and other crop products (both down -6.1%).

The *real* price index for animals and animal products continued its sharp decline (-6.9% compared with -9.3% in 1990). Severe real price falls occurred for sheep and lambs (-12.0%) and adult cattle (-10.7%). Continuing large real price reductions were observed for calves (-8.9%), poultry (-5.6%), milk (-6.3%) and eggs (-5.8%). Pig prices fared relatively well, down by only -3.3%, in real terms. The price index for other animal products continued its rapid descent (-18.8% after -13.6% in 1990).

In the individual Member States of EUR 12 (cf. Table 2), the rates of change of the *nominal* indices of producer prices of agricultural products range from -7.1% (L) to +19.1% (GR). In *real* terms, the range is from -14.8% (P) to -0.3% (GR).

The Community (EUR 11) forecast for the *real* producer price index, published in *Rapid Report 17-1991*, was reasonably accurate (-3.0% forecast in November 1991, as against a result of -3.4% for EUR 11). A forecast increase of +1.5% in the real crop products index did not materialize (result +0.2% for EUR 11), while the animal sector index fell slightly less than forecast (a result of -6.7% for EUR 11, compared with a forecast of -7.3%).

2. EC indices of the purchase prices of the means of agricultural production (input prices)

The index of purchase prices of goods and services for current consumption in agriculture (Input I) for EUR 12 increased by +3.1% in *nominal* terms in 1991 (cf. Table 3). In *real* terms this means a decrease relative to the previous year of -2.7%. As last year, the prices of inputs of agricultural origin recorded larger real falls than the Input I index as a whole; feedingstuffs were down -5.0%, seeds -3.7% and animals for rearing -6.1%. Fertilizer prices fell -3.0%, in real terms, a rate close to that of the Input I index. The real price of energy changed little (-0.3%) and the remaining components of the Input I index moved less than 1% in real terms.

Nominal intermediate consumption prices rose in all Member States except Denmark, while in *real* terms they fell everywhere in the Community except Greece. The rates of change of real Input I prices vary from -7.3% (P) to +4.1% (GR). The fall in the real prices of intermediate consumption was almost exactly as forecast at the end of 1991, although real energy prices, forecast to rise +2.1% for EUR 11, in fact remained almost constant.

The nominal index of purchase prices of goods and services contributing to agricultural investment (Input II) rose slightly more slowly than the rate of inflation for EUR 12 as a whole. However, real rates of change for these prices varied across Member States, from -6.7% (P) to +1.8% (NL) (cf. Table 4).

3. Comparison of changes in the EC index of real producer prices of agricultural products with changes in the EC index of the purchase prices of goods and services for current consumption in agriculture (Input I)

In the Community of EUR 12, the deflated output price index decreased by -3.8% during 1991, whereas the deflated Input I index decreased by -2.7%. Interpretation of these trends should allow for the fact that purchases of goods and services for current consumption in agriculture account for only part of the value of output (46%, in value terms, of the total sales of agricultural products for EUR 12, calculated according to the national farm concept). Therefore, a net price effect is calculated to reflect the impact of real output price and, to a lesser extent, input I price changes on the difference between sales and intermediate consumption expressed as a proportion of sales. Column 5 of the following table shows this net price effect for each Member State, arranged in order of increasing size. Portugal had the largest *negative* net price effect. Only the Netherlands and Italy had a positive net price effect. For EUR 12, the net price effect was -2.6 points.

Country	Rates of change of real output prices (%)	Rates of change of real input I prices (%)	Input I as a share of output in 1985	Corrected rates of change of real input I prices (%) (2 x 3)	Net price effect (points) (1 - 4)

Technical note

The EC agricultural price indices (output and input) are available in Eurostat's CRONOS data bank ("PRAG" domain) in both nominal and deflated form. By using deflated indices it is possible to eliminate the distortions in the nominal indices caused by different inflation rates in the Member States. The nominal agricultural price indices are deflated by means of the consumer price index. The terms "deflated" and "real" are used synonymously.

Portugal has now been included in the EC agricultural price index system for the output and input price indices (annual only).
