OPERA MUNDI - EUROPE

SUMMARY OF EUROFLASHES

July 1 to December 31, 1965

* * *

INTRODUCTION

This is the fourth in a series of six-monthly summaries of the Euroflash section of OPERA MUNDI - EUROPE. It constitutes a record of business penetration in the Common Market during the second half of 1965 (Nos. 311 to 337 inclusive).

Items are classified geographically, the Common Market countries being shown first in alphabetic order, followed by sections for Switzerland, Britain and USA, the three non-member countries most closely concerned.

The section for each country is preceded by a table of contents and then (except for Switzerland, Britain and USA) divided into two parts:

- (I) Operations which take place inside the Common Market, and
- (II) Operations initiated inside the Common Market but taking place outside it.

For instance, if a French company joined a German one to form a new firm in France, it would appear in Part I of France, because that is where the new event has happened. If, however, an Italian firm set up a subsidiary in Britain, it would appear in the second part of Italy and also in Britain. Each country's section is divided under industry headings and under each heading items appear in chronological order.

A comprehensive index at the back enables any reader who is mainly concerned with a particular company or group to find references to its activities during the half year; on the page indicated the event concerning that company is mentioned and reference is given to the complete item in its issue of original publication.
