COMMISSION OIL BULLETIN NO. 61

4412/41

The weekly bulletin, published by the Commission on the initiative of Commissioner Guido Brunner, member responsible for energy, gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 18th august 1980 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 148% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 93% in the Community.
- c) during the same period Rotterdam spot prices increased by 80 %.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

COMMISSION OIL BULLETIN NO. 62

4417, 41

The weekly bulletin, published by the Commission on the initiative of Commissioner Guido Brunner, member responsible for energy, gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 25 August 1980 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 148% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 91 % in the Community.
- c) during the same period Rotterdam spot prices increased by 79 %.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- Selling price of petroleum products

The Petroleum Bulletin No. 62 contains amongst other things, annexed, two tables which indicate at 15th June 1980 consumption price levels most often used, including taxes, for each of the principal petroleum products in the member states of the Community.

The prices, expressed in the national currency of each Member State, (with an indication at the given date of the rate of exchange against the dollar and the European Unity of Account) are made up by adding on the one hand the price less tax (estimated on a weekly basis in each of the Commission's Petroleum Bulletins) and the various charges and taxes in force in each Member Country.

COMMISSION OIL BULLETIN NO. 64

4417.41

The weekly bulletin, published by the Commission on the initiative of Commissioner Guido Brunnner, member responsible for energy, gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 8th September 1980 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 147% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 93% in the Community.
- c) during the same period Rotterdam spot prices increased by 81%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- Selling price of petroleum products

The Petroleum Bulletin No. 64 contains amongst other things, annexed, two tables which indicate at 15th July 1980 consumption price levels most often used, including taxes, for each of the principal petroleum products in the member states of the Community.

These prices, expressed in the national currency of each Member State, (with an indication at the given date of the rate of exchange against the dollar and the European Unit of Account) are made up by adding on the one hand the price less tax (estimated on a weekly basis in each of the Commission's Petroleum Bulletins) and the various charges and taxes in force in each Member Country.

COMMISSION OIL BULLETIN NO.65

4417.41

The weekly bulletin, published by the Commission on the initiative of Commissioner Guido Brunner, member responsible for energy, gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 15th September 1980 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 152 % as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 92% in the Community.
- c) during the same period Rotterdam spot prices increased by 83%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

COMMISSION OIL BULLETIN NO.70

4417.91

The weekly bulletin, published by the Commission on the initiative of Commissioner Guido Brunner, member responsible for energy, gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 20th October 1980 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 153% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products ⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 95% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 103% instead of 95%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- Cost of crude oil supply

Bulletin No. 70 contains, inter alia, a table in Annex which shows, by member state and for the Community as a whole, the quarterly development of average cif crude oil supply prices since the beginning of 1977. These average cif prices, obtained through the application of a 1976 Council Directive and a Commission implementing decision of 1977, stem from oil company declarations received by the Commission via member states. This information covers at least 85% of crude oil imports and includes local crude production. It gives average quarterly costs for each type of crude weighted by quantities supplied and calculated using the official market rates of exchange to give the most representative supply cost indications.

These figures can not be directly compared with the percentage increases in FOB prices shown below which, as in each weekly bulletin, represent an estimate of the average fob price increase between two specific dates, calculated for the Community on the basis of official prices established by OPEC and the normal crude oil supply slate for the Community.

COMMISSION OIL BULLETIN NO. 71

4417.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community. The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 27th October 1980 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 153% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 93% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 107% instead of 93%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

Brussels, 13 November 1980.

COMMISSION OIL BULLETIN NO. 72

4417.41

The weekly bulletin, published by the Commission, gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 3rd November 1980 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 153 % as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 95% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 111% instead of 95%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- Selling price of petroleum products

The Petroleum Bulletin No. 72 contains amongst other things, annexed, two tables which indicate at 15th August 1980 consumption price levels most often used, including taxes, for each of the principal petroleum products in the member states of the Community.

These prices, expressed in the national currency of each Member State, (with an indication at the given date of the rate of exchange against the dollar and the European Unity of Account) are made up by adding on the one hand the price less tax (estimated on a weekly basis in each of the Commission's Petroleum Bulletins) and the various charges and taxes in force in each Member Country.

COMMISSION OIL BULLETIN NO. 73

4417.46

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 10th November 1980 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 153% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 93% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 120% instead of 93%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

Brussels, 27th November 1980.

COMMISSION OIL BULLETIN NO. 74

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 17th November 1980 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 153% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products ⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 98% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 127% instead of 98%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- Selling price of petroleum products

The Petroleum Bulletin No. 74 contains amongst other things, annexed, two tables which indicate at 15th September 1980 consumption price levels most often used, including taxes, for each of the principal petroleum products in the member states of the Community.

These prices, expressed in the national currency of each Member State, (with an indication at the given date of the rate of exchange against the dollar and the European Unity of Account) are made up by adding on the one hand the price less tax (estimated on a weekly basis in each of the Commission's Petroleum Bulletins) and the various charges and taxes in force in each Member Country.

COMMISSION OIL BULLETIN NO. 78

4417, 41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 15 December 1980 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 158% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 102 % in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 112% instead of 102 %

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

COMMISSION OIL BULLETIN NO. 79

4417.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 5th January 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 164% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 105% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 113% instead of 105%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

COMMISSION OIL BULLETIN NO. 80

4/917.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 12 January 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 167% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products⁽¹⁾ reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 104% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 119% instead of 104 %.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.
