

EUROPEAN ECONOMY

COMMISSION OF THE EUROPEAN COMMUNITIES • DIRECTORATE-GENERAL FOR ECONOMIC AND FINANCIAL AFFAIRS

Supplement B — No. 3 — March 1989

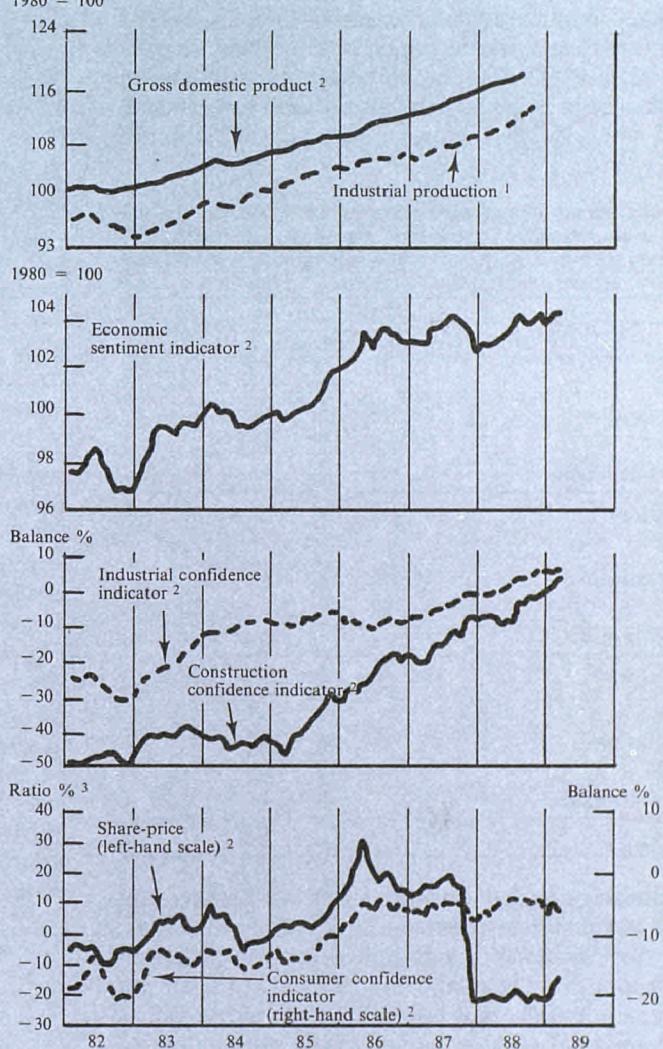

Business and consumer survey results

*In this number:
Survey results on
trends in investment
and in retail trade*

THE MAIN POINTS IN BRIEF

- The upward trend in the Community's economy continued in February. The results of the most recent industrial, construction, retail and consumer surveys show that confidence remains stable, particularly with regard to future prospects.
- Strong internal demand continues to sustain economic activity. The main spur is investment, which is set to remain a major determinant. Continued stability on the foreign exchange markets and the revival of world trade have made foreign trade a second pillar of economic performance.
- Industrialists are planning to expand production of capital goods significantly in the next few months. Capacity expansion has become an increasingly important motive for investment since 1986.
- In February, the Community's leading economic indicator continued at the high level reached in January. This is true both for the industrial climate and for seasonally adjusted consumer confidence. The climate in the construction industry improved further.

GRAPH 1: Indicators of output and economic sentiment — European Community

¹ Three-month moving average.

² See notes to Table 3.

³ Deviations from trend in %.

The economic trend in the Community continues to point upward. — The Community's economy maintained its expansionary course in February 1989. Taking the average for the Community, the results of the business surveys indicated an optimistic mood. The survey-based indicators remained at the high levels reached in previous months. This is true both for the industrial climate and for seasonally adjusted consumer confidence. In contrast, the construction industry and retail trade were significantly more optimistic than in previous months. Positive assessments relate especially to future economic prospects.

Investment continues to provide a major impetus to the economy.

— Strong internal demand is still the main engine of economic activity. This is spurred by investment, which is helping the economic upswing to maintain its momentum, with forecast rises in industrial investment in 1989 greater than in the previous year. Industrialists in the capital goods industries are planning to expand their production significantly in the coming months. Although investment activity remains largely focused on rationalization, taking the average for the Community, high capacity utilization and sustained demand mean that the number of firms which also wish to expand their plant capacities has been growing since 1986. This is particularly true of those Member States in which industrial production is soaring (see Table 2).

Production in the capital goods industries continues to expand vigorously.

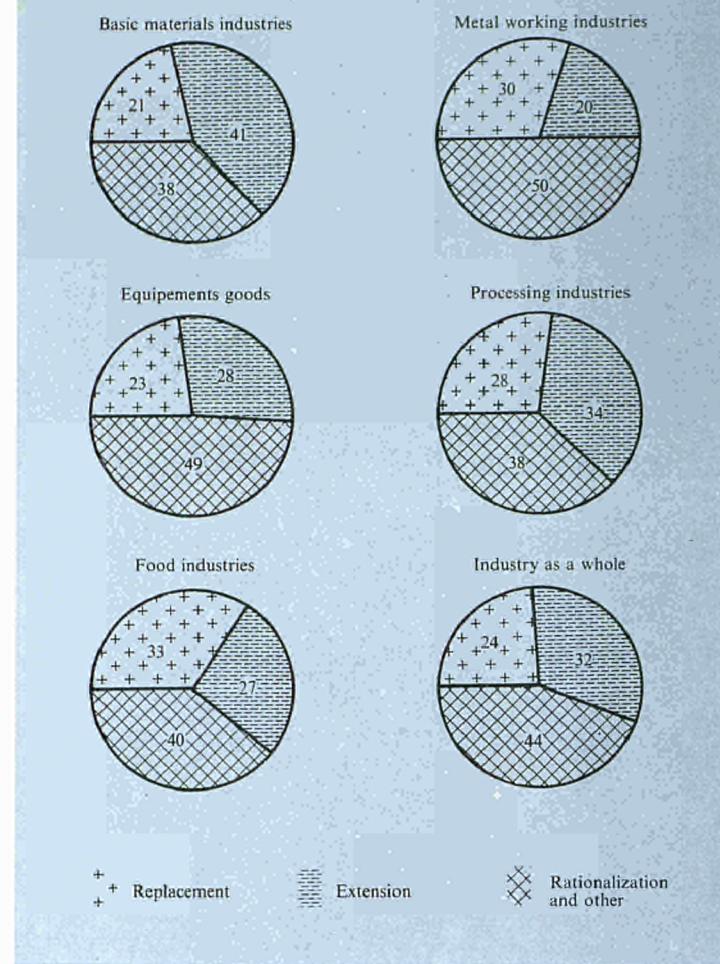

— The most recent industrial survey results indicate that, taking the average for the Community and looking at the balance, almost a quarter of industrialists in the capital goods sector wish to expand their production significantly in the next few months (see Table 1). Confidence in that sector improved further in February, contributing considerably to the increased confidence of industry as a whole, which has in recent months stabilized at a high level. The favourable situation in the capital goods industry has been helped by the most recent assessments of order books, which have on balance been considered more than satisfactory.

TABLE 1: Monthly survey of manufacturing industry Results for the three main branches of industry. Balances, i.e. differences between the percentages of respondents giving positive and negative replies (seasonally adjusted)

	1988			1989		
	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.
<i>Capital goods</i>						
Production expectations	15	16	15	17	22	22
Order books	0	2	3	4	2	2
Stocks of finished products	2	4	5	3	5	1
Confidence indicator	4	5	4	6	6	8
<i>Basic materials</i>						
Production expectations	14	16	18	17	13	12
Order books	8	12	11	11	8	1
Stocks of finished products	-1	-1	-1	-2	3	4
Confidence indicator	18	10	10	10	6	3
<i>Consumer goods</i>						
Production expectations	16	18	15	16	13	14
Order books	-2	-3	-3	-5	-2	2
Stocks of finished products	5	7	8	4	9	5
Confidence indicator	3	3	1	2	1	4

Industrialists consider stocks of finished goods to have been run down to a level which still ensures smooth handling of orders. Confidence in the consumer goods industries has increased further in recent months. The results for February indicate yet another improvement in the order book situation; industrialists are therefore planning to go on expanding their production. In the basic materials and intermediate goods industries the most recent survey results continue to point to a positive climate, but the number of positive assessments has on balance fallen slightly in the last few months.

CHART 2: Structure of industrial investment
Community 1989

The Community's leading indicator has stabilized at the previous months' high level. — The Community's leading indicator remained unchanged in February 1989 at the high level reached in previous months. The main reason for this stability is the continued positive *industrial climate*, which has not varied for five months. Industrialists view their order books as being well filled with both domestic and export orders. Stocks have been reduced to a normal level. Industrial output should therefore increase further.

The *confidence indicator in the construction industry* is improving from month to month, thereby confirming that performance in that industry is catching up with the generally good economic trend. The *consumer confidence* indicator, taking the average for the Community, lost one net point. But after seasonal adjustment, it still stood at its April 1988 level. The overall indicator has recently stabilized, principally because of consumer optimism about general economic prospects.

The *retail trade*, taking the average for the Community, is expecting a further growth in sales in the next few months; this, at least, is what is indicated by the surveys' results. The January survey shows that trade should improve in the coming months for textiles, footwear, domestic appliances and furnishings and above all for passenger cars, compared to figures for twelve months earlier. Private consumption will thus continue to have a positive influence on economic activity.

TABLE 2: Structure of industrial investment (1986-1989) (Breakdown of industrialists' views of the type of investment undertaken in each sector)^(a)

(a) The indicator is an average of the responses (balances) to the questions on production expectations, order-books and stocks (the latter with inverted sign).

(b) These are the extreme (high and low) values of the balances of the different questions, reached in the course of 1972-1975 and 1979-1983, respectively.

Note: (s.a.) = seasonally adjusted. : = not available. () = estimated. * = figures not s.a.

Questions of European Community business and consumer surveys

Manufacturing industry

Monthly:

- estimate of production trend in recent months: up, unchanged, down?
- order-books: above normal, normal, below normal?
- export order-books: above normal, normal, below normal?
- stocks of finished products: above normal, normal, below normal?
- production expectations in the months ahead: up, unchanged, down?
- selling price expectations in the months ahead: up, unchanged, down?

Quarterly (January, April, July and October):

- employment expectations for the months ahead: up, unchanged, down?
- limits to production: none, insufficient demand, shortage of labour, lack of equipment, others?
- production capacity: more than sufficient, sufficient, not sufficient?
- duration of assured production: in months?
- new orders in the recent past: up, unchanged, down?
- export volume expectations for the months ahead: up, unchanged, down?
- capacity utilization: in %?
- stocks of raw material: high, normal, low?

All industries

Half-yearly (undertaken in March/April and October/November):

- investment trends and prospects: yearly percentage change of investment expenditure in current money values.

Building industry

Monthly (except for Denmark, Greece, France, Ireland and the United Kingdom, where the survey is carried out quarterly):

- current production compared with the preceding month: up, unchanged, down?
- factors holding up production: none, lack of demand, bad weather, shortage of manpower, shortage of material and/or equipment, others?
- order-books or production schedules: above normal, normal, below normal?
- employment expectations in the months ahead: up, unchanged, down?
- price expectations in the months ahead: up, unchanged, down?

Quarterly (January, April, July and October)

- duration of assured production: in months?

Retail trade sector

Monthly (France and Italy bi-monthly):

- we consider our present business (sales) position to be: good, satisfactory (normal for the season), bad;
- we consider our present stock to be: too small, adequate (normal for the season), too large; we expect that our orders placed on suppliers during the next (three) months, excluding purely seasonal variations, will be: up, unchanged, down;
- our business trend over the next six months, excluding purely seasonal variations, will improve, remain unchanged, deteriorate.

Quarterly:

- In the next three months, and compared with today, the number of persons we employ will: increase, remain unchanged, decline.

Consumer survey

Monthly:

- Financial situation of your household now compared to 12 months ago: a lot better, a little better, the same, a little worse, a lot worse, don't know.
- Financial situation of your household, prospects over the next 12 months: a lot better, a little better, the same, a little worse, a lot worse, don't know.

- General economic situation in the country now compared to 12 months ago: a lot better, a little better, the same, a little worse, a lot worse, don't know.
- General economic situation in the country, prospects over the next 12 months: a lot better, a little better, the same, a little worse, a lot worse, don't know.
- Price level now compared to 12 months ago: much higher, moderately higher, a little higher, about the same, lower, don't know.
- Price trend over the next 12 months: more rapid increase, same increase, slower increase, stability, slight decrease, don't know.
- Unemployment level in the country over the next 12 months will: increase sharply, increase slightly, remain the same, fall slightly, don't know.
- Major purchases (furniture, washing machine, TV, etc.) at present: yes, right time; neither right nor wrong time, should postpone; don't know.
- Major purchases next 12 months, compared to last 12 months: much more, a little more, the same, a little less, much less, don't know.
- Savings at present, reasonable time to save: yes, certainly; yes, perhaps; probably not; certainly not; don't know.
- Savings by you or your household over the next 12 months: yes, certainly; yes, perhaps; probably not; certainly not; don't know.
- Financial situation of households at present — financial assets accumulation: borrowing, drawing on savings, just making ends meet, saving a little, saving a substantial amount, don't know.

Economic sentiment indicator

The economic sentiment indicator is a composite measure in which the industrial confidence indicator and the consumer confidence indicator are given equal weight, while the construction confidence indicator and the share-price index are attributed half the weight of each of the other two. The share-price index is included in the composite indicator in ratio-to-trend form, in order to separate short-term or cyclical variations from long-term increases in the value of shares. The long-term trend of the series is calculated using the NBER Bry-Boschan growth cycle programme. For a fuller description of the economic sentiment indicator and its components, see the technical note in the November 1982 issue of this Supplement.

Industrial confidence indicator

The industrial confidence indicator is the arithmetic average of the answers (balances) to the questions on production expectations, order-books and stocks (the latter with inverted sign).

Construction confidence indicator

The construction confidence indicator is the arithmetic average of the answers (balances) to the questions on order-books and employment expectations.

Consumer confidence indicator

The consumer confidence indicator is the arithmetic average of the answers (balances) to the four questions on the financial situation of households and general economic situation (past and future) together with that on the advisability of making major purchases. For a more detailed description of the consumer confidence indicator see technical note in the December 1982 issue of Supplement C.

Industrial confidence indicator

The industrial confidence indicator is an average of the responses (balances) to the questions on production expectations, order-books and stocks (the latter with inverted sign).

Construction confidence indicator

The construction confidence indicator is an average of the responses (balances) to the questions on order-books and employment expectations.

Consumer confidence indicator

The consumer confidence indicator is the arithmetic average of the answers (balances) to the four questions on the financial situation of households and general economic situation (past and future) together with that on the advisability of making major purchases. For a more detailed description of the consumer confidence indicator see technical note in the December 1982 issue of Supplement C.
