Business and Consumer
Survey Results

No 7 – July 1996

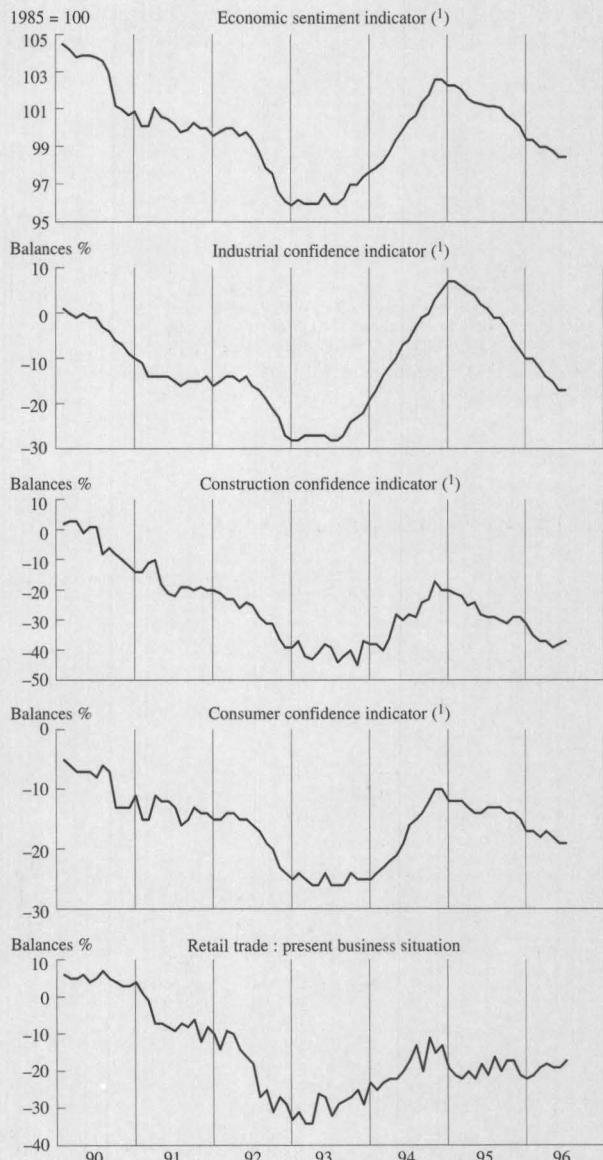

In this number :
Industrial investment
in 1995 and 1996

Stabilization of economic sentiment

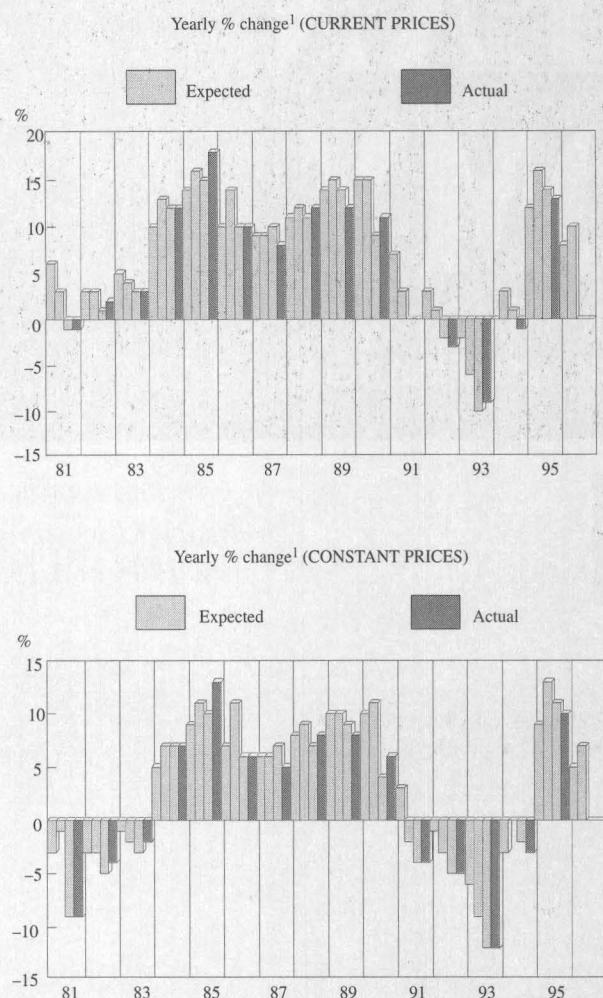

- The results of the investment survey of manufacturing industry conducted in March/April suggest that investment demand will continue to remain strong in 1996.
- After expanding their investment by 10% in 1995 (13% in value terms), manufacturing firms are planning to increase their real investment by 7% in the current year (10% in value terms).
- In June the industrial confidence indicator stay unchanged as in May. Against a background of significantly improved industrial production in Germany this suggests that the situation may have stabilized.
- Consumer confidence remains stable in June.

GRAPH 1 : Indicators of economic sentiment —
European Community (s.a.)

(1) See notes to Table 5.

GRAPH 2 : Investment in manufacturing industry –
(Community as a whole)

For each year the first column represents the first estimate given in the autumn of the previous year; the second column is based on the spring survey results of the current year (April); the third column is the forecast for the current year according to the investment survey in October/November; the fourth column (actual) gives the reported rate of change according to the spring survey of the next year.

No further deterioration in economic sentiment in the Union. – The economic pause in the European Union seems to have come to a halt: the economic indicators point to an end, across a broad front, to the downward movement recorded since 1994. This suggests that the standstill in growth which has persisted for some time is now past. It remains to be seen, though, whether this means that we are on the verge of a lasting economic recovery.

Generous industrial investment plans for 1996. – The results of the investment survey of manufacturing industry conducted in March/April suggest that – compared with the depressed climate hitherto – investment demand will continue to remain strong in 1996. Following a 10% real increase in 1995 (13% in value terms), manufacturing firms are planning a substantial expansion of 7% (10% in value terms; see Table 1) in the current year. This prompts the conclusion that the competitive position is again regarded as sufficiently strong for European industrial firms to want once more to expand capacity. In Germany, industrial firms are expecting that a planned rise in investment of 5% in real terms will have a 2% effect on capacity. According to the plans of industrial firms, investment in Greece (26%), the Netherlands (24%), Belgium (21%), Finland (20%), Austria (19%), Sweden (19%), Luxembourg (12%) and the United Kingdom (10%) will increase by significantly more than the Union average (7%); planned investment in France too (8%) is also slightly above average. If these plans are carried out, the investment climate in the other countries will also improve, helping the economic recovery.

(a) The changes in volume are calculated by dividing the changes in value, based on the surveys, by the corresponding deflators for gross capital formation. For 1995 and 1996 forecast deflator is used.

(b) Chemicals, man-made fibres, petroleum refining, rubber processing, etc.

(c) Manufacture of textiles, footwear, wood, paper, printing and processing of plastic industries.

(d) Excluding the extractive industries.

(e) Weighted total of the above (not given when data are substantially incomplete).

(f) Including the metallurgical industries.

(g) Including energy and water.

(a) The indicator is an average of the responses (balances) to the questions on production expectations, order-books and stocks (the latter with inverted sign).

Significant increase in investment in metalworking industries. – If the results for industry as a whole are broken down by sector, it can be seen that firms in the metalworking industries plan to increase their investment by more than double; in nominal terms, they show the strongest growth (14%) of all major industrial groups. This year's investment plans in the basic materials industry also indicate a larger increase (12%). Firms in the investment goods industries are also intending to expand their investment in 1996 by more than the average, though by less than last year (19%). By contrast, the pace of investment activity in the consumer goods industries will slow down; firms are clearly cautious on account of the anticipated weakness of private consumption and, after the strong increase in 1995 (16%), intend to up their investment by only 4%. Investment activity also remains weak in the food, drink and tobacco industries despite the planned increase in investment spending from 2% in 1995 to 5% in 1996.

Current sentiment in industry has not deteriorated further. – In June the industrial confidence indicator did not fall below the point it reached in May but remained at the same low level. The number of firms which are intending to expand or curtail their production in the near future remained in balance. Assessments of order books and stock levels were also unchanged. In the construction industry, where the downward trend has been in evidence longest, contractors were again less pessimistic; this was mainly reflected in improved employment expectations.

Among consumers, the confidence remains stable in June. – Although consumers in the Community were just as pessimistic about the financial position of their own households in June as they had been in the previous month, they were less gloomy in their expectations about the future economic situation. It remains to be seen whether this will contribute to a hardening of confidence in the coming months.

TABLE 7 : Survey of the construction industry

Balances : i.e. differences between the percentages of respondents giving positive and negative replies (s.a.)

(a) The sum of the replies for each Member State are weighted in the Community total with the value of consumers' expenditure.

(b) The indicator represents the arithmetic average of results for five questions, namely the two on the financial situation of the household, the two on the general economic situation, and that concerning major purchases at present.

(c) If monthly data are not available, the EUR-averages incorporate the most recent available results.

* DK Max. 88/91 and Min. 92/93 UK Max. 88/89 and Min. 90/93.

TABLE 9 : Results of business surveys in the retail trade

Balances : i.e. differences between the percentages of respondents giving positive and negative replies (seasonally adjusted)
