EUROPEAN COMMISSION

DIRECTORATE-GENERAL FOR ECONOMIC AND FINANCIAL AFFAIRS

**Supplement B**  
**Business and Consumer**  
**Survey Results**  
**No 10 – October 1996**

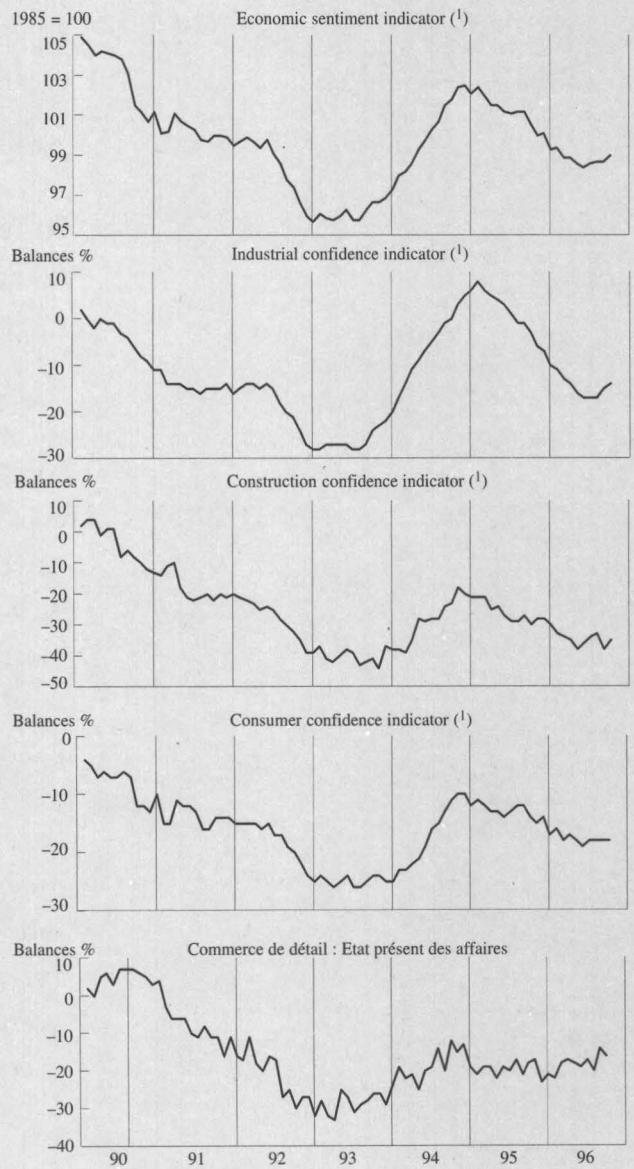

*In this number :*  
*Business Survey Results*  
*for the Central and*  
*Eastern European Countries*

## Mounting confidence among industrialists

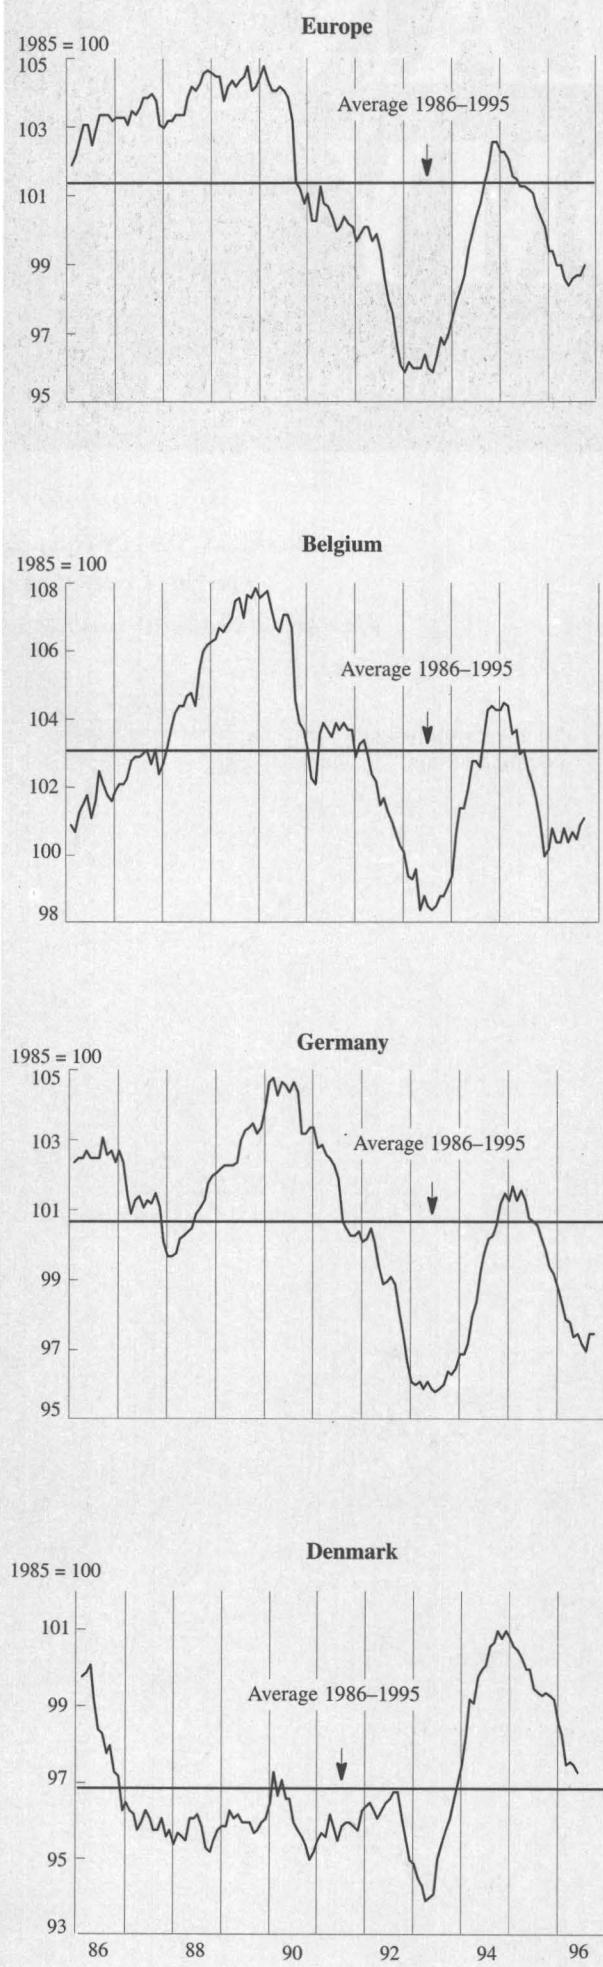

- The assessment of the general economic situation and of confidence continued to improve in September. According to the results of this month's survey in *industry*, output will continue to rise.
- The climate in the *construction* industry showed a further slight improvement, but the indicator was still lower than in July.
- For some months consumer confidence has remained stable. Consumers took a positive view of the current and future trend of consumer prices.
- Retailers, however, were still sceptical in September about their business situation and planned in particular to reduce their orders.

(1) See notes to Table 1.

GRAPH 2 : Economic sentiment indicator (s.a.)

## Further improvement in the economic climate in the Union.

The September business surveys confirm the gradual improvement of confidence in the economy. However, there were pronounced differences from country to country. The increase in confidence in the last six months has been particularly marked in Belgium, Greece, Spain, the Netherlands, Portugal and the United Kingdom. It was in these countries, and in Germany, Austria and Sweden, that the restoration of confidence in the economy among industrialists was greatest. Consumers, on the other hand, continued to take a rather reserved view of economic prospects.

### The EU's leading economic indicator is rising.

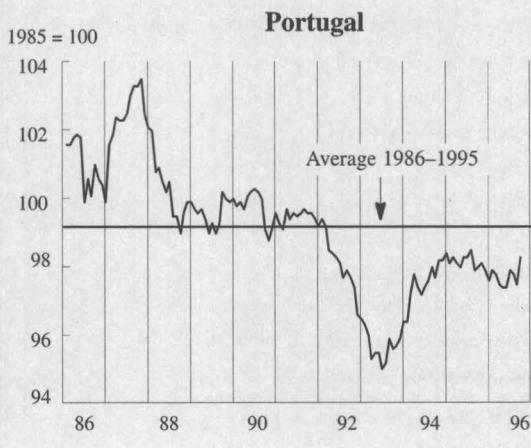

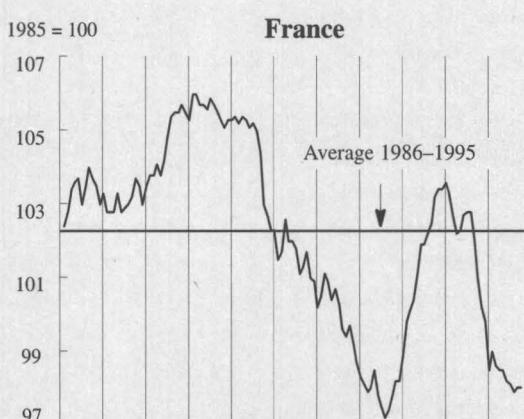

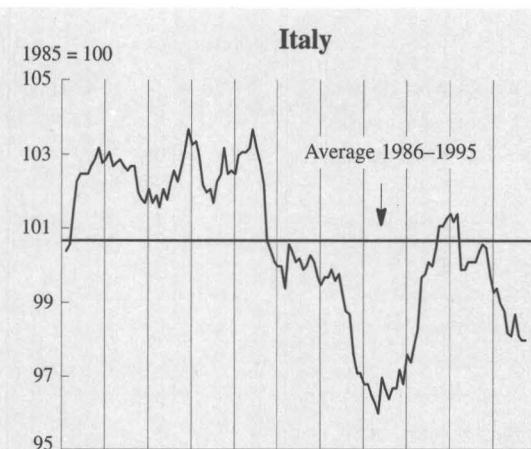

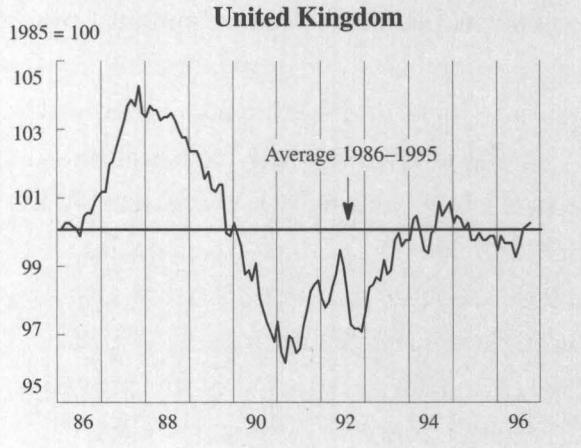

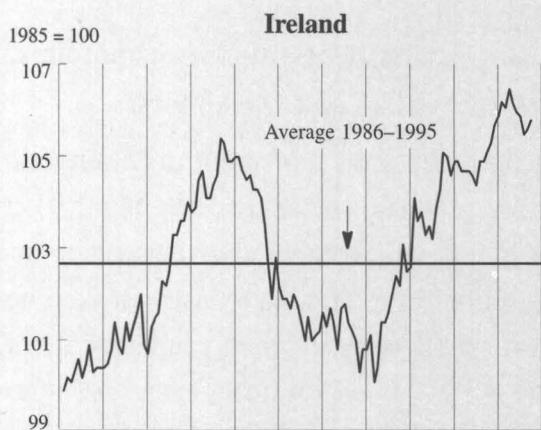

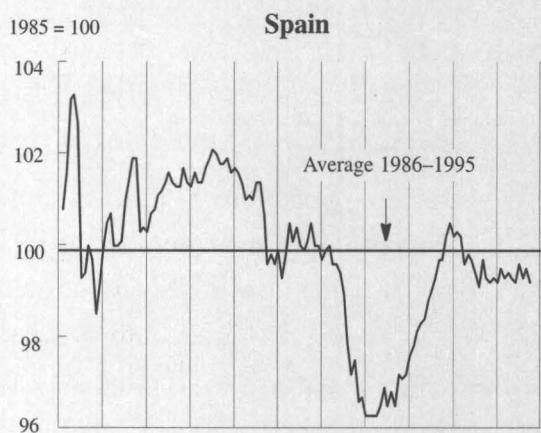

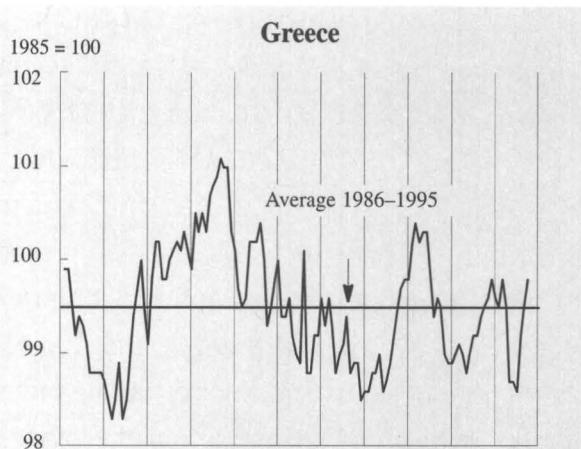

The EU's indicator of economic sentiment improved by 0.3 percentage point in September to 99.0 (the trend has been pointing upwards since the summer). Only in Spain – probably on account of weak consumer confidence in particular – did the indicator fail to reach its August level.

### Differing assessments of the economic climate among businesses and consumers.

In *industry* the indicator of current economic sentiment was again up on the previous month. The number of industrialists planning to increase output in the coming months continued to rise. Broken down by country, the propensity to expand predominated in eleven of the fifteen Member States, and it was only in Belgium, Germany, Italy and Luxembourg that most firms planned to reduce output further in the coming months. At the same time, in nine countries the assessment of domestic and export order-books was more optimistic, while industrialists' sales forecasts were increasingly favourable. Many industrialists pointed to a broad-based decline in the pressure of stocks – this was a feature of all countries except Germany, Spain, Ireland and Italy. Consequently, industrial output was still providing a spur to activity in the economy as a whole.

(a) Not seasonally adjusted. Source : Eurostat, DRI. Weights for the calculation of EUR have been updated according to GDP.

\* Used data-sign in the tables : (s.a.) = seasonally adjusted, : = not available.

The figures for the Federal Republic of Germany refer to Western Germany, if not mentioned otherwise.  
Economic sentiment indicator and share-price index : 1985 = 100; the confidence indicators : balances.  
New selected code for abbreviations: **EL** = **GReece**.

Source, unless stated otherwise : European Commission business and consumer surveys.

The climate in the *construction* industry picked up a little in September, but the indicator was still below its July level, primarily because firms planned to reduce their workforces further.

*Consumers* in September were as pessimistic as they had been in previous months both about their financial situation now and over the next twelve months and about the general economic situation. They were more positive, however, on the price front, including the future trend of prices.

In August *retailers*' perception of their economic situation had no longer been quite so unfavourable, but this improvement did not continue in September.

## Results of the business surveys in the Central and Eastern European Countries.

The most recent results (the surveys are harmonized, and hence compatible, with those for the EU and have been carried out in some countries now for more than three years) show no uniform trend from country to country. In *industry* (in five out of nine countries) and particularly in *construction* (in six out of eight countries), the trend for the confidence indicator is pointing upwards. Against this, the mood among *retailers* and *consumers* in most countries is still pessimistic. (See tables 6, 7, 8 and 9.)

(a) The indicator is an average of the responses (balances) to the questions on production expectations, order-books and stocks (the latter with inverted sign).

(b) Not seasonally adjusted.

(a) The sum of the replies for each Member State are weighted in the Community total with the value of consumers' expenditure.

(b) The indicator represents the arithmetic average of results for five questions, namely the two on the financial situation of the household, the two on the general economic situation, and that concerning major purchases at present.

(c) Not seasonally adjusted.

TABLE 5 : Results of business surveys in the retail trade <sup>(a)</sup>

Balances : i.e. differences between the percentages of respondents giving positive and negative replies (seasonally adjusted)
