EUROPEAN COMMISSION  
DIRECTORATE-GENERAL FOR ECONOMIC AND FINANCIAL AFFAIRS

## Supplement B Business and Consumer Survey Results No 12 – December 1996

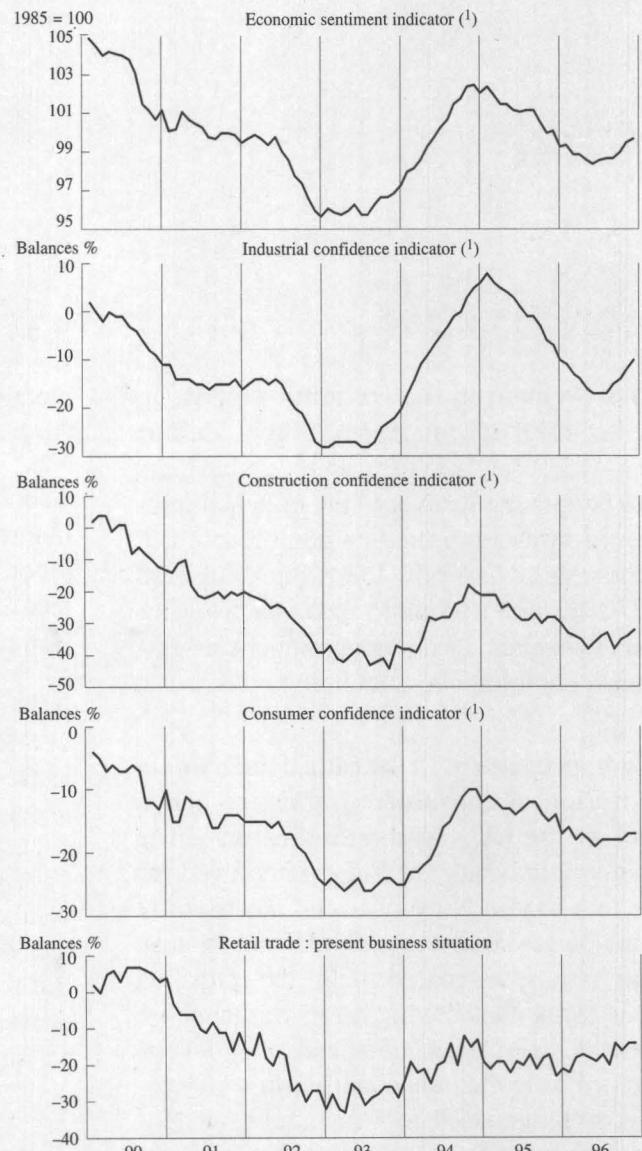

*In this number :  
International indicators*

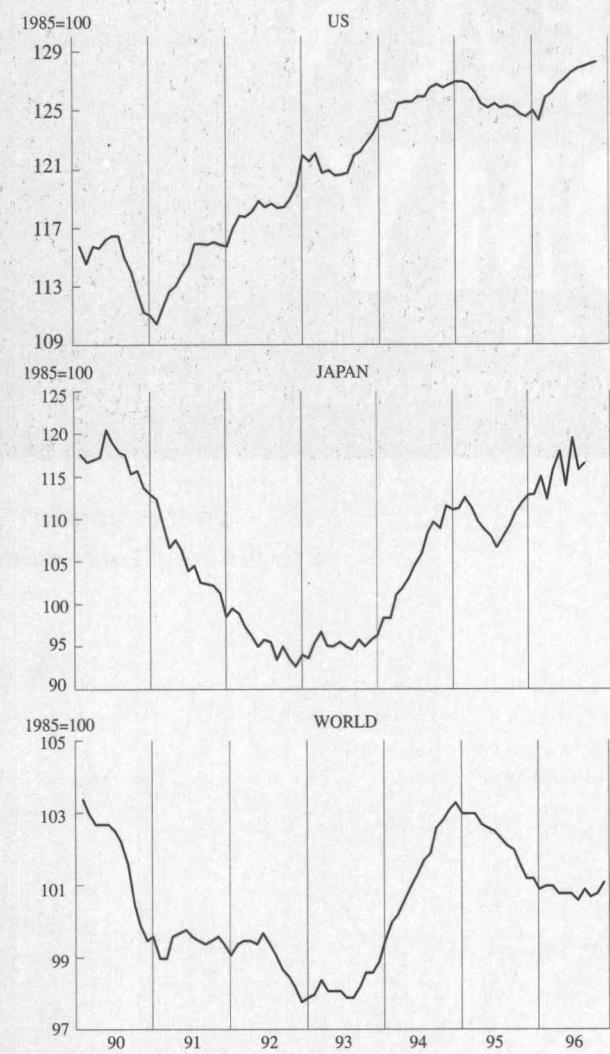

### MOUNTING CONFIDENCE AMONG INDUSTRIALISTS

- The EU's leading economic indicator again improved in November.
- In November industrialists again assessed their economic situations less pessimistically than in the previous month. For four months now, the number of managers intending to expand production over the coming months has grown.
- According to the findings of a worldwide survey carried out in October among some 450 economic experts from a total of 60 countries, a majority expect world economic growth to continue over the next few months.

Economic Planning Agency of the Japanese Government.

**Continuing improvement in the economic climate in Europe.**— The low level of economic activity in Europe seems to be picking up slowly. The most recent business surveys point to continuing recovery: the principal indicators have moved away from the low point reached in the middle of the year and are now following an upward trend. The EU's leading economic indicator also improved again in November. The more optimistic assessments of managers contributed particularly to this.

**The continuing improvement in the industrial climate and the stabilization of consumer confidence had a positive impact on the EU's leading indicator.**— The *industrial* confidence indicator for Europe improved for the fourth time in a row in November and has risen by seven percentage points since June. The indicator rose two percentage points compared with the previous month. The main factor contributing to this was the more favourable assessments of order-book and stock levels. Ireland and Sweden were the only countries in which order-book levels were assessed less favourably in November than in October. Given the improving sales expectations, the majority of industrialists in almost all

member countries (except for Luxembourg and Austria) are planning to expand production.

According to the most recent surveys in the *construction* industry, the climate has improved there too. While the mood among building firms is still depressed, the movement in long-term interest rates has helped to halt any further increase in negative expectations in this sector.

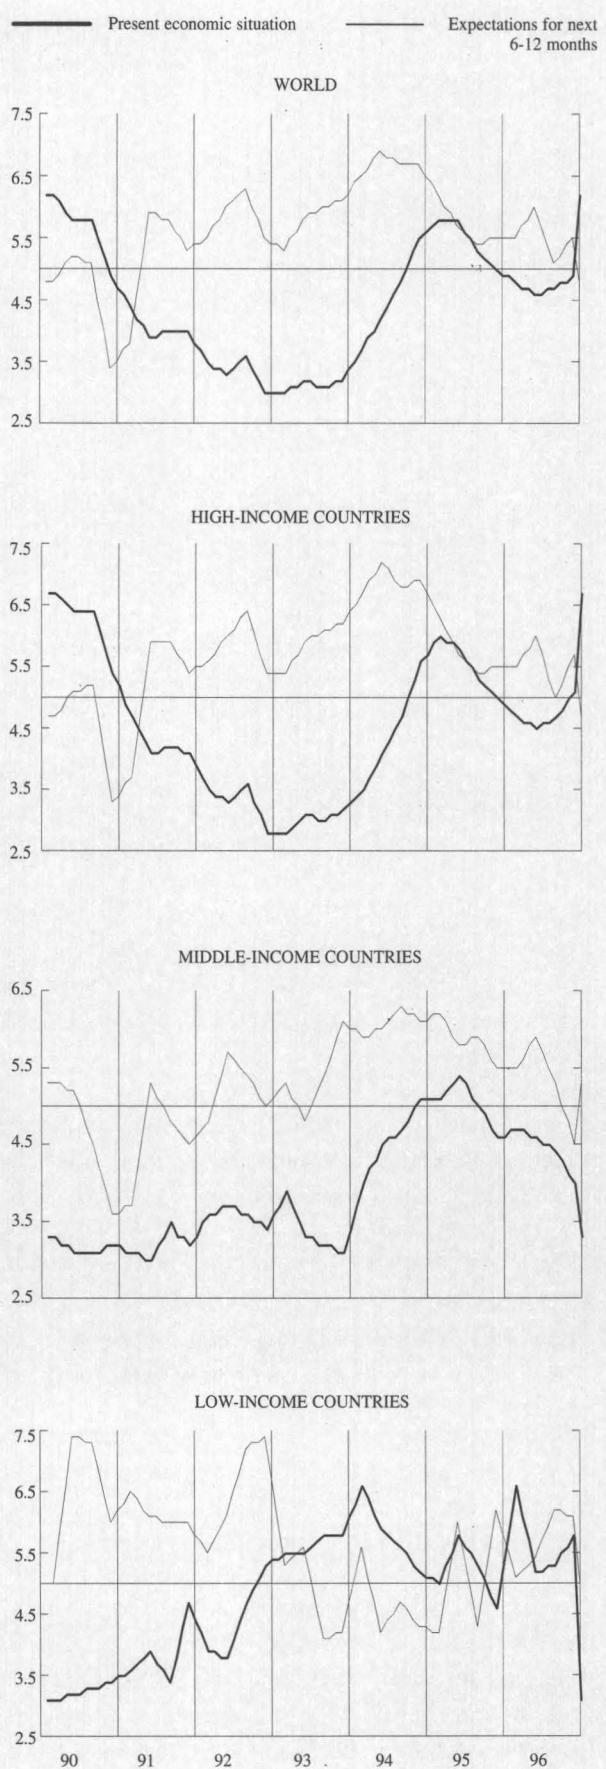

In November European *retailers'* assessments of future developments were again somewhat more hopeful than in October. However, their caution regarding orders remained just as strong as in previous months.

*Consumers' confidence* remained at the same level in November as the previous month. There may only be a further decline in confidence in Greece, Ireland and Italy. But for the continuing loss of confidence among Italian consumers, consumer confidence would even have risen further in November. Consumers were less negative,

GRAPHS 4-5 : "Economic Survey International"

**GRAPH 4 : Present economic situation and expectations for the next six to twelve months**

**GRAPH 5 : Import and export expectations for the next six to twelve months**

The Economic Survey International has been conducted by the IFO Institute on behalf of the European Commission 4 times per year (January, April, July, October) and is based on the answers of about 500 economic experts in about 62 countries. The replies are 'graded' : positive responses (+) receive a grade of 9, indifferent ones (=) a grade of 5 and negative ones (-) a grade of 1. Grades between 5 and 9 imply a preponderance of positive replies or increase, while grades between 5 and 1 indicate that negative replies or decreases predominated.

(a) The indicator is an average of the responses (balances) to the questions on production expectations, order-books and stocks (the latter with inverted sign).

(n) Not seasonally adjusted.

TABLE 3 : Survey of the construction industry

Balances : i.e. differences between the percentages of respondents giving positive and negative replies (s.a.)<sup>(a)</sup>

however, in their assessments of the general economic situation. There was also a fall in the number of consumers fearing a rise in unemployment over the next twelve months.

**International indicators are pointing to a further upward trend in the world economy.**— In keeping with the recent upward movement in the Union's leading indicator, the leading indicator for world production has been rising since the middle of the year. The leading indicator for the United States is helping in particular to underpin this trend but the indicator for Japan is also at a high level. In order to gain a more comprehensive picture of the world economic situation, the findings of the Economic Survey International (ESI) carried out on behalf of the European Commission were also used to calculate the world leading indicator.

Initial assessments have confirmed that this experimentally constructed leading indicator of the world economic trend, with its lead time of approximately six months, provides quite an accurate picture of the trend of world production.

**The Economic Survey International (ESI) again shows a markedly improved climate of confidence regarding the world economic situation.**— According to a worldwide survey conducted in October among nearly 450 economic experts, the majority of participants from a total of 60 countries expect the world economic upturn to continue over the next six months. However, managements of multinational companies view the *current overall economic situation* more cautiously than in the previous quarters. This applies particularly to countries with high and very low income. By contrast, worldwide expectations of the *future economic trend* have improved markedly.

Asked in October about the most important problems currently facing their national economies, the European economic experts placed *unemployment* at the top of the list by far, with *budget deficits* coming second. Taking the world as a whole, however, unemployment and budget deficits ranked equal first. Lack of confidence in government policy and weak demand ranked third and fourth at world level and were given equal importance at EU level.

The ranking of the problems has barely altered compared with the earlier surveys.

(a) The sum of the replies for each Member State are weighted in the Community total with the value of consumers' expenditure.

(b) The indicator represents the arithmetic average of results for five questions, namely the two on the financial situation of the household, the two on the general economic situation, and that concerning major purchases at present.

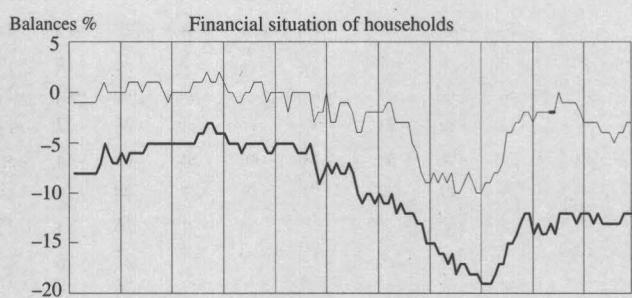

(n) Not seasonally adjusted.
