

# INDUSTRIAL SHORT-TERM TRENDS

Monthly

## INDEX OF INDUSTRIAL PRODUCTION

The outlook for recovery put in doubt by the fall in production in December 1981

The provisional index of industrial production in the Community for December 1981 stood at 115.2 (1975=100), a fall of 0.5% compared with the same month of the previous year. Production in the last quarter of 1981 showed a meagre increase of 0.1% over the same quarter of 1980.

Seasonal adjustment of the December index produced a figure of 113.0, i.e. 1.6 points down on the average level of the previous three months. In the wake of this fairly substantial fall the short-term growth indicator (see corrected indices, %A : ratio of the last three months to the previous three months) fell back to zero, reflecting stagnating production in the fourth quarter. The hopes of recovery raised by the increase of the growth indicator from -0.4% in October to +0.6% in November therefore failed yet again to materialize. The fall-off in production in December is largely the consequence of the falls recorded in Germany and in Italy (2.4% down in each case in relation to November 1981, after seasonal adjustment), and, to a lesser extent, of that recorded in the United Kingdom (-0.7%), this latter fall being partly due to adverse weather.

1981 thus ended with production down 2.1% compared with 1980, and 3% compared with 1979, which was the peak year at Community level and at national level except in Italy, Denmark and Greece where production peaked in 1980. With the exception of Ireland, all countries in which production fell in 1980 registered a further fall in 1981, as can be seen from the table below. Of the countries which had managed to boost their production in 1980, only Denmark was spared this downturn.

COUNTRY	PEAK PRODUCTION	%1980 1979	%1981 1980	%1981 1979

## N O T E S

### 1. NOMENCLATURE OF INDUSTRIAL ACTIVITIES

The indices included in this bulletin cover industry as it is defined in divisions 1 to 4 of the General Industrial Classification of Economic Activities within the European Communities (NACE). In part III of the bulletin there are also some indicators relating to NACE division 5 (building and civil engineering).

### 2. INDICES OF PRODUCTION

2.a The index of production reflects changes in the volume of production. For industry as a whole, it also indicates changes in volume (at constant prices) in the gross added value created by industry, the branch indices being aggregated (like the aggregation at Community level for a given industrial branch) by means of a system of weighting according to gross added value (in principle, at factor costs). The indices are adjusted in two stages: first they are adjusted to take account of the varying number of working days in the month and this is followed by seasonal adjustment according to EUROSTAT's own particular method.  
Further information on the index of production may be obtained from supplement 01.1978 of this bulletin.

#### 2.b Meaning of %A and %B:

2.b.1 indices of production per working day:

- %A: the last twelve months as compared with the previous twelve months;
- %B: the last month as compared with the corresponding month of the previous year.

2.b.2 seasonally adjusted indices of production:

- %A (short-term growth): the last three months as compared with the previous three months;
- %B: the last month as compared with the previous month.

2.c The descriptions and definitions in 2.a and 2.b above are also applicable to the indices of production for building and civil engineering.

2.d The indices of production for non-Member States (Spain, Portugal, the United States and Japan) are taken from OECD sources. The indices for Spain and Japan are not adjusted for differences in the number of working days.

3. Unlike the index of production (see 2.a above), the other indices (turnover, orders, exports, imports, number of employees, gross wages and salaries) are not adjusted to allow for differences in the number of working days in each period before they are seasonally adjusted.

### 4. INDICES OF TURNOVER AND ORDERS RECEIVED

These reflect changes in turnover (overall sales, including sales for export) and orders received at current prices. For detailed definitions, see also supplement N° 12-1980 to this bulletin.

### 5. INDICES OF IMPORTS AND EXPORTS BY INDUSTRIAL BRANCHES

These are indices of imports or exports (special trade), at current prices (respectively c.i.f. or f.o.b.), of industrial products classified according to the industrial branches to which they belong. It should be emphasized that this classification implies the need to make certain choices in allocating external trade products to overall groups of products according to a nomenclature of industrial activities, and that even comparability between the indices for imports and those for exports is limited.

The indices for the EEC as a whole refer only to trade with non-Member States.

#### NOTE

For the time being the indices are based on the external trade of the Community of Nine, excluding Greece, which became a full member of the Community with effect from 01.01.1981.

### 6. INDICES OF THE NUMBER OF EMPLOYEES AND OF GROSS WAGES AND SALARIES

6.1 The number of employees includes all persons employed by the firm (manual workers and salaried employees on the company's payroll).

6.2 Gross wages and salaries cover all sums paid out to persons employed by the company in remuneration for the work they do, including taxes and social security contributions payable by the employee and deducted by the employer, but excluding social security and other contributions payable by the employer. A methodological note on these two indices is being prepared and will be published as a supplement to a future issue of this bulletin.

### 7. BUILDING AND CIVIL ENGINEERING (PART III)

For information on the index of production and its layout, and on the index of the number of employees, see sections 2 and 6.1 above.

The indices for authorised dwellings and dwelling starts and completions only give a picture of activity in the residential building sector, whereas the other two types of indices also cover non-residential building and civil engineering.

### 8. GRAPHS

The graphs cover the trend in production and/or employment, whereby the trend is defined as the moving average over three months (after seasonal adjustment) in the case of the index of production; in the case of employment, for which the indices are quarterly, a monthly series is obtained by linear interpolation (without seasonal adjustment).

### 9. ADDITIONAL INFORMATION

The information included in this bulletin has been taken from the CRONOS data bank, which may be accessed via the EURONET network. Information on CRONOS-EURONET or on the information given in this bulletin may be obtained from EUROSTAT in Luxembourg, tel. 4301-3208 (Mr. VANDERSEYPEN).

10. SYMBOLS AND ABBREVIATIONS:

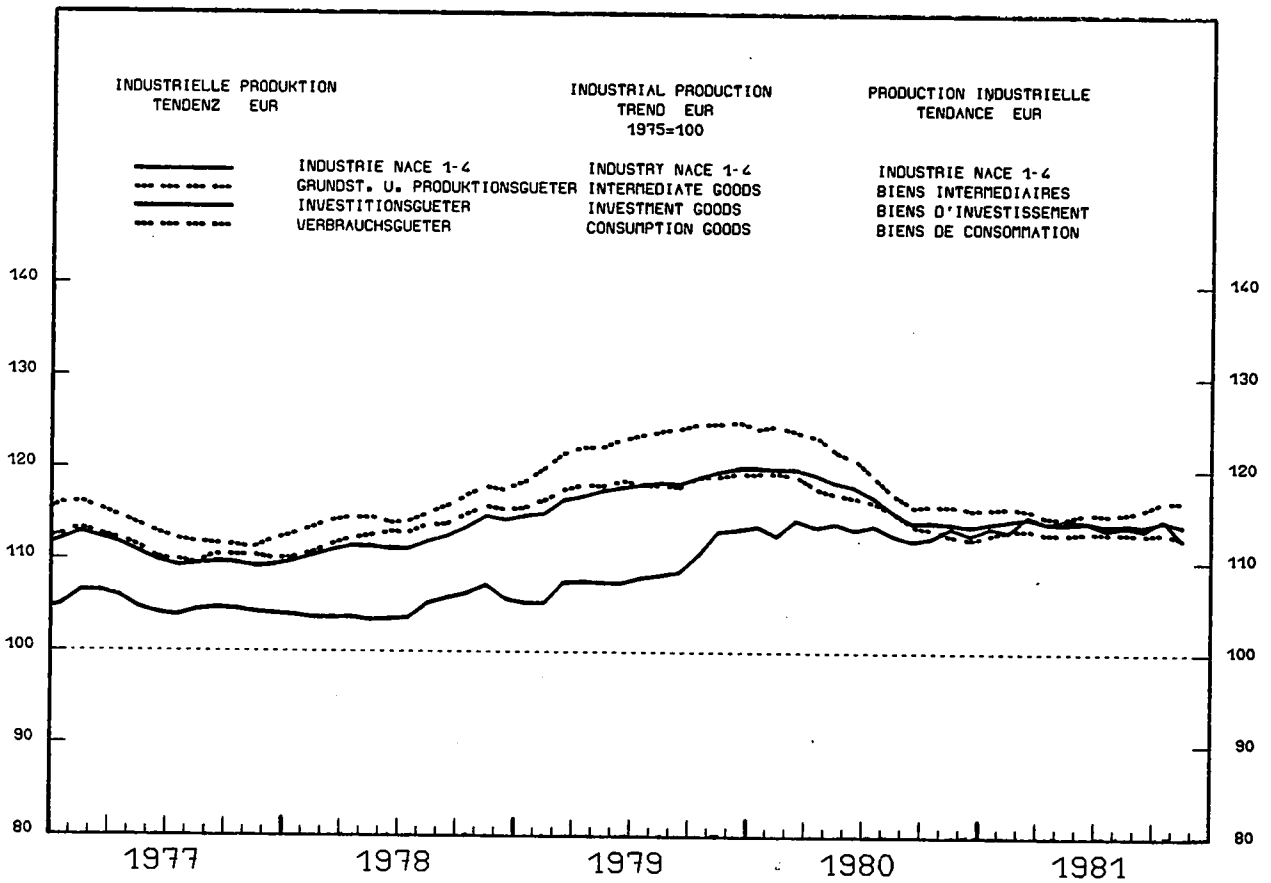

- : data not available;
- non-existent series;
- ADJ seasonally adjusted.
